NOTE TO USERS

Changes occur from time to time in tables contained in this Review to reflect newly available economic series, changes made in concepts, composition, comparability, seasonal adjustment methods, benchmark data, etc.

Changes in this issue are as follows:

Tables 17 and 18: Wages and Salaries, by Province and by Industry, and Supplementary Labour Income

The latest monthly figures on these tables are advance estimates. These estimates, which have been prepared for the first time for January 1969, are based on early returns of employment. They have a lesser degree of reliability than the estimates for the immediately preceding and previous months which are based on more complete information.

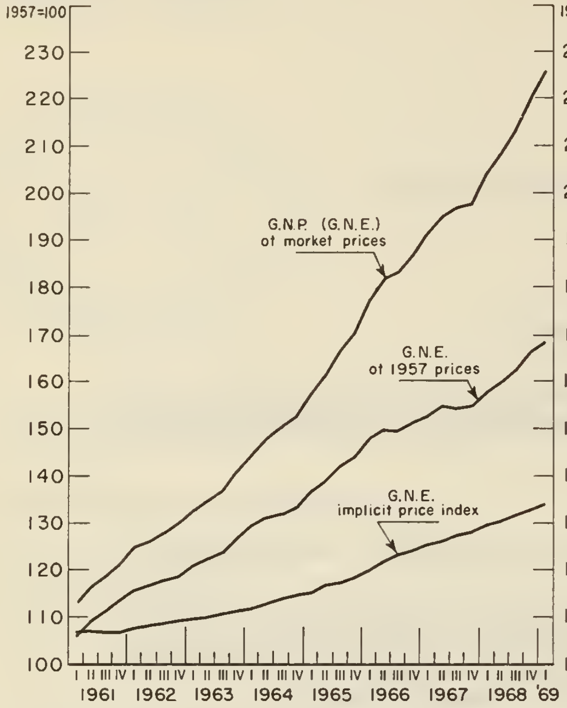
Tables 75 and 76: Farm Cash Receipts, by Source and by Province

Farm Cash Receipts have been completely revised from the first quarter 1960 to date. Revised data for years not published in this Review are available upon request.

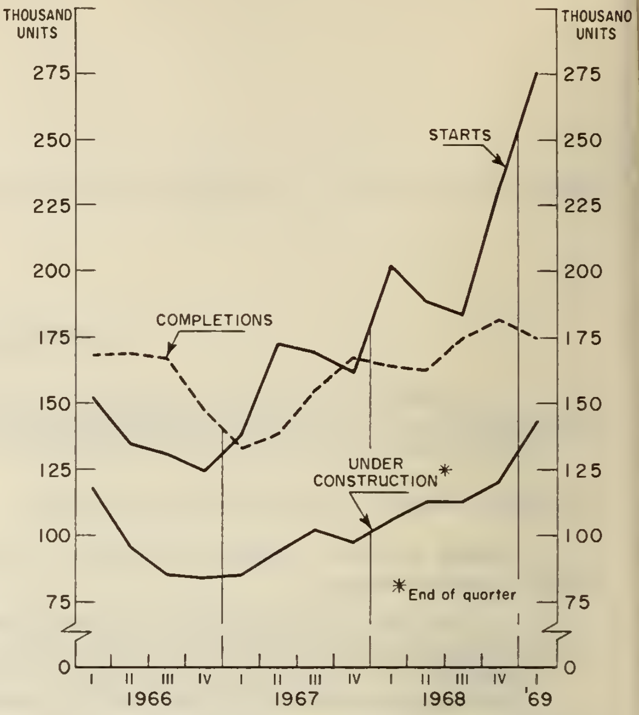
Table 109: Life Insurance Sales, by Type and by Province

Life Insurance Sales have been revised for the years 1967 and 1968.

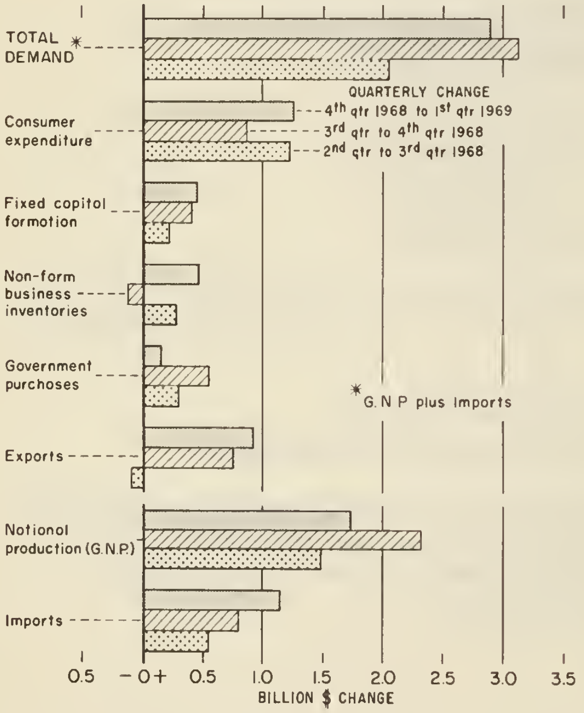
G.N.P. in the first quarter rose 2.5 per cent in current prices and 1.4 per cent in real terms.



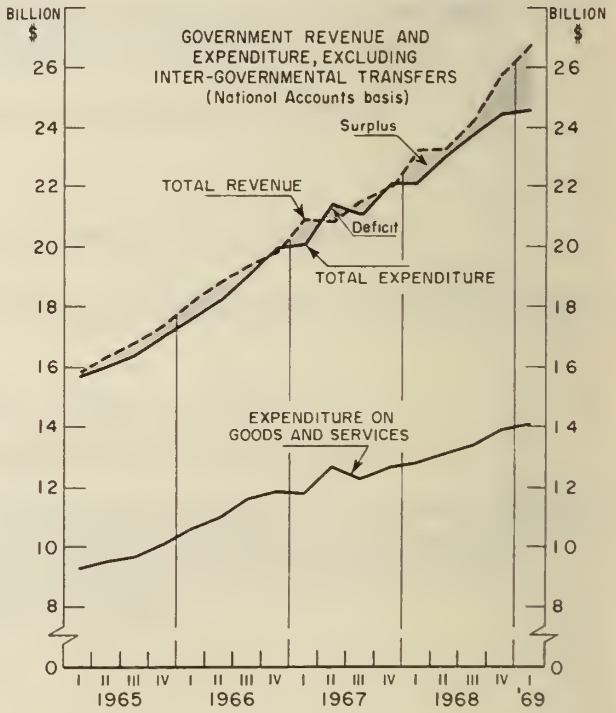
Housing investment rose 19 per cent in the first quarter reflecting higher starts in both the fourth and first quarters. The number of units under construction also rose sharply.



Total demand rose $2.9 billion, or 3.3 per cent, and was broadly based. On the supply side, sharp increases occurred in both national production and imports.



Government expenditures were almost unchanged while revenues rose 3½ per cent, resulting in a sharp increase in the surplus.



ALL DATA SEASONALLY ADJUSTED, AT ANNUAL RATES.

NATIONAL ACCOUNTS, INCOME AND EXPENDITURE, FIRST QUARTER, 1969

Introductory Review

The rapid pace of economic activity continued in the first quarter of 1969, as the Gross National Product increased by 2.5 per cent to reach a level of $71.9 billion, seasonally adjusted at annual rates. After allowing for a price rise of 1 per cent, slightly higher than in the fourth quarter, the advance in constant dollars was about 1½ per cent.[1] Excluding accrued net income of farm operators,[2] GNP rose 2.7 per cent in current dollars.

Intensified demand pressures by most sectors, partially met from substantially higher imports, characterized the quarter. Larger advances than in the fourth quarter occurred in personal expenditure, business gross fixed capital formation and exports, together with increased investment in business non-farm inventories. On the other hand, government purchases of goods and services rose only slightly, while accumulation of farm inventories[2] declined sharply—in part the result of much higher wheat exports.

Personal expenditure rose a substantial 3 per cent, as all major series except automobiles and tobacco recorded gains; the advance in consumer outlays outpaced a 1 per cent increase in disposable income, resulting in a sharp decline in personal saving. Gross fixed capital formation increased by 3½ per cent, largely the result of a 10 per cent expansion in new residential construction as housing starts rose steeply; outlays for plant and equipment advanced at the same moderate rate as in the fourth quarter, with a 5 per cent gain in the machinery and equipment component outweighing a drop of 3 per cent in non-residential construction. Accumulation in non-farm business inventories rose by $468 million to $1,020 million, with increases in all major industrial groups.

Government purchases of goods and services advanced by 1 per cent, the smallest increase in six quarters. The government sector as a whole exercised a restraining influence on the economy; excluding inter-governmental transfers, expenditures rose only fractionally while revenues advanced 3½ per cent, resulting in a sharp increase of $812 million in the combined surplus.

Reflecting the strength of demand by both Canadians and non-residents, exports and imports registered their largest increases since the first quarter of 1968. Merchandise exports advanced 5½ per cent, led by large gains in wheat, wood pulp, newsprint, and a number of metals. Merchandise imports rose more rapidly, 7½ per cent, with sizable advances in non-farm machinery in line with the larger domestic investment program. Increases of about 13 per cent in both receipts and payments of tourists were the prominent features of the non-merchandise account. The current account deficit on a National Accounts basis widened by $224 million to $748 million; the merchandise surplus declined to $928 million, while the non-merchandise deficit was almost unchanged.

Among components of income, labour income advanced by 3 per cent; mixed movements in other components were on balance offsetting. Within labour income, both the goods-producing and service-producing sectors had the same rate of increase; employment rose by 1½ per cent and the unemployment rate declined to 4.2 per cent from 4.9 in the fourth quarter. Net corporation profits before taxes slipped fractionally from the high level of the previous quarter; gross profits, which include capital consumption allowances, registered a modest increase of 1½ per cent.

Price Movements

Prices rose 1.0 per cent in the first quarter of 1969 compared with 0.8 per cent in the preceding quarter. Higher price increases were recorded in exports and government expenditure; the price components of both business gross fixed capital formation and imports continued to advance at the same rate as in the fourth quarter while personal expenditure showed lower price increases.

The softening in the rate of increase in consumer prices was most apparent in non-durable goods. Food prices, in particular, rose by 0.4 per cent this quarter compared with 1.7 per cent last quarter. Increases in cereal and dairy products and fish partially offset declines in bakery products, and poultry. Among non-food non-durable goods, the largest increase was shown by alcoholic beverages which rose by 0.6 per cent. Tobacco products showed a slight decline. In durable goods, the rise of 0.4 per cent was the result of higher prices for new cars, household appliances and radios, and furniture.

Services continued to exert a dominating influence on the rise in consumer prices. The strongest rises were recorded in transportation, medical care, and recreation. The rent index, on the other hand, showed some deceleration, rising by 0.7 per cent compared with 1.1 per cent in the previous quarter.

---

[1] Real Domestic Product at factor cost by industry of origin, an alternative but conceptually somewhat different measure of economic production, shows a 2.0 per cent advance in real terms for the first quarter. Among the differences between the two series are market price valuation versus factor cost, the use of national versus domestic boundaries, and the use of different weight-base periods.

[2] Estimates of crop production are based on acreage intentions and ten-year average yields. On these assumptions, the value of the 1969 crop would be $1.3 billion compared with $1.5 billion in 1968. Seasonally adjusted quarterly figures are obtained by dividing the annual estimate by four.

In business gross fixed capital formation, the price component of new residential construction registered a very strong 3.6 per cent advance. The price index of residential building materials jumped by 4.7 per cent, largely attributable to a 6 per cent increase in lumber products; the labour component rose by 1.6 per cent. There was no change in the price index for non-residential construction, as the advance in the price index of the building component was offset by a decline in that of engineering construction, including railways.

Within merchandise exports, increases were recorded in the prices of meat and meat preparations, newsprint paper, lumber, shingles and crude animal products. Decreases were registered in the price indexes of alcoholic beverages, wheat and other cereal products, asbestos, fertilizers, non-agricultural machinery and equipment, and motor vehicles and parts.

The Components of Demand

Personal Expenditure on Consumer Goods and Services

Personal expenditure reached a level of $43.5 billion, seasonally adjusted at annual rates, an increase of 3 per cent from the fourth quarter. All three major aggregates contributed to the rise, with non-durables and services advancing more rapidly than in the preceding quarter and durables recording a 2 per cent gain after a fractional decline previously.

Expenditures on non-durables advanced nearly 3½ per cent, the largest gain in seven quarters. Outlays for alcoholic beverages increased by 5 per cent from the strike-affected fourth quarter; clothing expenditure also rose 5 per cent, paced by a 7½ per cent advance in women's and children's apparel which had shown little change in the three preceding quarters. Increases of 2 to 3 per cent occurred in outlays for gasoline, oil and grease, energy sources for home use, and food. In contrast, the tobacco series declined by 5 per cent.

Among components of durable goods, increases of between 3 and 5½ per cent occurred in purchases of furniture, home furnishings and appliances. Partly offsetting these gains was a 1½ per cent decline in car outlays, resulting from a drop of 3 per cent in purchases of new cars of North American manufacture.

All components of services recorded increases, mostly in the range of 2 to 3½ per cent. The purchased transportation component registered the largest advance — 6½ per cent.

Business Gross Fixed Capital Formation

Spending on fixed capital formation marked a third consecutive quarterly increase, rising by 3.4 per cent to a level of $13.6 billion, seasonally adjusted at annual rates. The $448 million increase had a mixed composition: residential construction and machinery and equipment rose by $316 million and $272 million respectively, while non-residential construction dropped by $140 million.

New residential construction rose by 10 per cent as housing starts rose to an annual rate of 275,000 units from 231,000 in the fourth quarter. It is interesting to note that, as a result of sharp increases in the number of starts and a relatively stable level of completions, the number of housing units under construction has been climbing sharply since the end of the third quarter of 1968.

Investment in plant and equipment rose by 1.3 per cent—the result of a 5 per cent increase in machinery and equipment spending and a 3 per cent fall in non-residential construction. The increase in machinery and equipment was associated with increased imports of non-farm producers' durables and larger outlays on passenger and commercial vehicles. The lower level of non-residential construction of $4.7 billion was about the same as the average investment of the years 1967 and 1968.

Non-farm Business Inventories

Investment in non-farm business inventories picked up strongly this quarter, with an accumulation of $1,020 million, seasonally adjusted at annual rates, compared with $552 million in the previous quarter. The strength in inventory investment was pervasive. Retail trade showed the largest accumulation, but manufacturing and wholesale trade also recorded sizable inventory investment.

Value of Physical Change in Non-farm Business Inventories

Seasonally adjusted at annual rates

	4 Q 1968	1 Q 1969
	millions of dollars	
Manufacturing	168	368
Durables	176	264
Non-durables	– 8	104
Wholesale	108	196
Retail	324	456
"Other" industries	– 48	—
Grand totals	**552**	**1,020**

In manufacturing, the strongest accumulation was in durables, where additions to the stocks of primary metal, metal fabricating, machinery, transportation and electrical products industries more than offset a sizable liquidation in the wood products industry. In non-durables, although most components showed additions to stocks, liquidations occurred in the rubber, clothing and knitting mills and paper products groups. By stages of fabrication, stocks accumulated at all levels. The stock-to-shipments ratio for manufacturing as a whole was slightly lower than that of the previous quarter.

Over two thirds of the accumulation in both wholesale and retail trade occurred in non-durable lines, where increases were widespread. Stock-to-sales ratios increased this quarter, especially in wholesale trade.

Exports and Imports of Goods and Services

With exports of goods and services higher by $924 million, and imports by $1,148 million, the balance on current account for the quarter, on a National Accounts basis, widened from a deficit of $524 million at annual rates to a deficit of $748 million. The merchandise surplus dropped from $1,144 to $928 million, while the non-merchandise deficit was practically unchanged.

Merchandise exports rose 5½ per cent from the fourth quarter level. Increases were recorded in wheat, iron ore, asbestos, lumber, wood pulp, newsprint, iron and steel products, copper, industrial and farm machinery, motor vehicle parts and communication equipment. Shipments of motor vehicles, however, dropped sharply.

Merchandise imports climbed 7½ per cent. There were sizable increases in the imports of non-farm machinery, reflecting the pick-up in machinery and equipment spending, and in coal and fuel oil. Imports of most consumer items also increased.

The unchanged deficit on non-merchandise trade resulted from a smaller deficit in miscellaneous transactions (government expenditures, personal and institutional remittances, miscellaneous income and business services) offsetting larger deficits in interest and dividend and in freight and shipping transactions.

Transactions with Non-residents

Government Sector

Seasonally adjusted at annual rates, total revenues of all governments combined (excluding inter-governmental transfers) increased by $908 million, or 3.5 per cent in the first quarter to $26,744 million. More than three quarters of the gain occurred in revenues from direct and indirect taxation; both contributed about equally to the rise.

Personal direct taxes rose 4 per cent, with the gain concentrated at the federal level. The gain was partly associated with the imposition of the Social Development Tax at the beginning of the year. Corporation direct taxes rose by 3 per cent with the bulk at the federal level.

Revenue from indirect taxes rose by $348 million with the gain occurring at the provincial-municipal level. This rise reflected higher returns from gasoline and sales taxes at the provincial level and higher revenues from property taxes at the municipal level. At the federal level increases in revenue from customs import duties and excise duties were more than offset by a decline in revenues from excise taxes.

Total expenditure (excluding inter-governmental transfers) increased by $96 million to $24,556 million. Expenditure on goods and services by all governments rose by 1 per cent, with the increase occurring at the provincial-municipal level. Federal outlays on goods and services were virtually unchanged with a decline in defence spending offsetting higher non-defence outlays.

Transfer payments to persons declined slightly in the quarter; there were offsetting movements at the different levels of government. Federal payments rose as a result of a further lowering in the age limit of recipients of old age security pensions. Transfer payments at the provincial-municipal level declined from the irregularly high levels of the last half of 1968 when payments were made under the Ontario Residential Property Tax Reduction Act.

The decline in subsidies occurred at the federal level and reflected, in the main, smaller payments to the railways.

Federal transfer payments to other levels of government increased and were attributable to higher payments under the Federal-Provincial Fiscal Arrangements Act and higher post-secondary educational grants.

With total revenues of all governments combined (including the Canada and Quebec Pension Plans) rising more sharply than expenditures, the government surplus, seasonally adjusted at annual rates and on a National Accounts basis, increased from $1,376 million in the fourth quarter of 1968 to $2,188 million in the first quarter, the largest in recent years. At the federal level, revenues rose by about 3½ per cent while expenditures increased by almost 2 per cent so that the federal surplus moved from a rate of $248 million in the fourth quarter to a rate of $452 million in the first quarter. Provincial-municipal revenues rose by 4½ per cent and expenditures were virtually unchanged so that the provincial-municipal surplus increased from a rate of $84 million to a rate of $692 million. The surpluses of the Canada and the Quebec Pension Plans showed little change.

The Components of Income

Labour Income

Total labour income increased by 3 per cent, a somewhat higher gain than the trend experienced in the last two years. Wages and salaries in both the goods and the service-producing industries rose at about the same rate as the total.

The increase in the goods-producing industries was somewhat higher than in the previous quarter and about 1 per cent higher than the average quarterly advances in 1968. A 3 per cent rise in manufacturing was associated with increases of about 1 per cent in employment and 2 per cent in earnings. In construction, wages and salaries rose by over 4 per cent, mainly because of substantial employment increases in building construction. The primary industries showed only a slight advance.

In the service-producing industries, transportation, storage, communication and other utilities increased by about 1½ per cent, trade by 4 per cent, and finance and service by 3½ per cent. These increases resulted from both gains in employment and higher earnings. Wages and salaries in government increased by almost 3 per cent.

Corporation Profits

After increasing steadily since the first quarter of 1967 and gaining strong momentum in the latter part of 1968, net corporation profits declined fractionally in the first quarter. Capital cost allowances increased by 4½ per cent; gross profits, which include these charges, rose by 1½ per cent.

Profits in the manufacturing industry dropped by 4 per cent from the peak fourth quarter level and by 6 per cent in the transportation, storage and communication industry; in the finance industry there was also a modest shift downward from the high fourth quarter level. The trade groups registered relatively strong advances from their high fourth quarter levels. There was a 10 per cent improvement in wholesale trade profits, 5 per cent in retail trade, and a robust 35 per cent advance in the service industry.

Within the manufacturing group, a majority of the industries experienced lower profit levels. The groups with the largest declines were wood, metals, electrical products, and petroleum and coal, while lesser declines occurred in the textile, printing, and chemical groups. Offsetting these declines were gains in the food and beverage, paper, and non-metallic mineral industries.

Accrued Net Income of Farm Operators

Accrued net income of farm operators fell to $1,804 million or 7.2 per cent below the fourth quarter rate. The decline was largely due to a fall in the estimated value of the 1969 crop, which is based on acreage intentions and ten-year yields. Partially offsetting this decline was an increase in the profits of the Canadian Wheat Board as exports rose well above the fourth quarter level.

Real Domestic Product[3]

Real Domestic Product registered a second consecutive 2 per cent advance in the first quarter. Both the goods-producing and service-producing industries rose at the same rate, with increases in all industry divisions except forestry and fishing and trapping.

Advances of over 4 per cent occurred in transportation, storage, and communication, and in construction; trade rose by over 2 per cent with most of the gain at the wholesale level. The community, business and personal services division increased by 1½ per cent, with education and business services being the main contributors. Manufacturing rose by less than 1 per cent, entirely due to the non-durable component, especially pulp and paper mills; durables declined fractionally, as drops in motor vehicles and parts and in saw-mills offset increases elsewhere.

---

[3] For further information, see "Index of Industrial Production", April 1969 (DBS Catalogue No. 61-005).

LABOUR FORCE (More detail in Table 19)

THE TOTAL LABOUR FORCE INCREASED SLIGHTLY IN MAY. UNEMPLOYMENT ROSE SUBSTANTIALLY, WHILE EMPLOYMENT WAS VIRTUALLY UNCHANGED. UNEMPLOYMENT WAS 4.9 PER CENT OF THE LABOUR FORCE.

		total labour force	total employed	employed non-agriculture	unemployed	unemployment rate	not in the labour force

---

[1] The occupational status of the majority of the persons destined to the labour force is determined by immigration officials by an examination of documentary evidence provided by the immigrants. The classification of occupations is similar to that used in the 1961 Census; see Occupational Classification Manual, Census of Canada, 1961, Catalogue Number 12-506. [2] Includes logging, fishing, trapping and hunting. [3] Includes mechanical and construction. [4] Includes a small number in non-specified occupations. [5] Does not include students entering Canada on students' visas. [6] Includes also retired persons, elderly dependents, fiancés or fiancées and other unspecified persons not intending to enter the labour force. **Source: Quarterly Bulletin, Department of Manpower and Immigration.**

---

[1] Includes change in farm inventories. The seasonally adjusted data include an arbitrary smoothing of crop production, standard seasonal adjustments for withdrawals of grain from farm stocks and the change in livestock items. Because of arbitrary elements, too precise an interpretation should not be given to the series. [2] Includes residual error of estimate. Source: at bottom of Table 14.

---

[1] Excludes inmates of institutions, members of the armed services, Indians living on reserves and residents of the Yukon and Northwest Territories. The estimates are derived from a sample survey and are subject to sampling error. In general, the smaller the estimate, the larger is the relative sampling error. [2] The labour force as a percentage of the population 14 years of age and over. [3] The unemployed as a percentage of the labour force. **Source: Labour Force Bulletin, (71-001), D.B.S.**

[1] See footnote 1, table 19. Labour force obtained as the sum of employed and unemployed from tables 21 and 23. [2] Canada totals, obtained by summing the seasonally adjusted data for the five regions, are usually different from the totals given on page S-1. The small differences result from the seasonal adjustment of the Canada and regional data having been carried out independently of each other. **Source: The Labour Force, (71-001) D. B. S.**

---

[1] In calculating time loss, only the workers directly affected by the strike or lockout are taken into account; time lost by workers indirectly affected, such as those laid off as a result of a work stoppage is not included. [2] The statistics for individual industries exclude strikes and lockouts involving fewer than 100 workers; the total, however, includes all work stoppages. The agricultural, finance, insurance and real estate and public administration and defence industries are not shown separately; should strikes occur in these industries, they also will be shown in the total. [3] Includes miscellaneous manufacturing industries. [4] Includes also publishing and allied industries. [5] Includes also the storage and communication industries. **Source: Labour Gazette, Department of Labour.**

*Revised monthly data will be available later.

[1] The data in Tables 28 to 35 are based on reports from firms employing 20 persons or more in any month of the year and relate to the last pay periods in the month. Greater industrial and area detail and more explanatory notes are given in the source publication named below. [2] Excludes agriculture, fishing, trapping and public administration and defence. [3] Includes storage, electric power, gas and water utilities. [4] Excludes domestic service. Source: Employment and Average Weekly Wages and Salaries, (72-002), D.B.S.

[1] See footnote 1 and source in Table 28. [2] Employment indexes in total manufacturing and in its total durable and non-durable components are given in Table 28. [3] In addition to those listed, tobacco products; knitting mills; printing, publishing and allied; and miscellaneous manufacturing industries are included in non-durable manufacturing. [4] Except machinery and transportation equipment industries.

[1] The data for the current year are subject to revision. [2] Includes gold. [3] Consists of general wholesale index less animal products and vegetable products component groups. [4] Consists of iron products and non-ferrous metals products component groups less gold. [5] These two series comprise the general wholesale index. [6] Excludes gold. **Source: Prices and Price Indexes (62-002), D. B. S.**

---

[1] Total commodities and services does not add up to 100 per cent; the portion of shelter which includes taxes and mortgage interest, and amounts to 8 per cent, is excluded. [2] These indexes measure within each city the percentage change in consumer prices from the base period to the subsequent time periods. **They cannot be used to compare levels of prices between cities.** **Source: Prices and Price Indexes (62-002), D.B.S.**

[1] Monthly shipments represent an estimated projection of the latest available Census of Manufacturers values except for those industries whose long-term contracts result in large intermittent shipments; for these a monthly estimate of work put in place has been substituted. [2] Total manufacturing inventory owned by manufacturers including warehouse stocks. [3] Total new orders received during the period at estimated selling value, net of cancellations, regardless of whether the orders will be filled from stock or as a result of activity during the same month. [4] Annual figures for inventories and unfilled orders are end of December values.

---

[1] Monthly shipments represent an estimated projection of the latest available Census of Manufacturer's values except for those industries whose long term contracts result in large intermittent shipments; for these a monthly estimate of work put in place has been estimated. **Source: Inventories, Shipments and Orders in Manufacturing Industries (31-001), D.B.S.**

[1] Starting with January 1968, production is manufacturers' production; prior to that date production was indicated by the use of excise duty stamps. [2] Intended for cigarettes. [3] Includes sales to wholesalers or retailers. [4] Subject to Excise Tax. [5] Includes sales for ships' stores and for export. [6] End of period. [7] Includes smoking, chewing and twist. **Sources: Tobacco and Tobacco Products Statistics Quarterly (32-014), D. B. S.; and Department of National Revenue.**

[1] Prior to 1964 data are not entirely comparable since they are on a production basis. [2] Includes slims and stretch pants. [3] Made from woven fabrics: shorts. [4] Starting with first quarter of 1968, "women's and Misses' category" becomes "Women's, Misses' and Juniors'". Data are not changed. **Source: Garment Shipments (34-001), D.B.S.**

[1] Total pulp production covers "screenings" which are already included in exports. "Screenings" are excluded throughout from mechanical and chemical pulp. [2] 100 cu. ft. of solid wood; pulpwood produced for domestic use and excluding exports, but including receipts of purchased roundwood. [3] Customs exports. [4] Mill shipments destined for export. **Sources: Pulpwood and Wood Residue Statistics (25-001), Trade of Canada, Exports (65-004), D.B.S; Bulletins of Canadian Pulp and Paper Association and Newsprint Association of Canada.**

---

[1] Data compiled according to the Steel Distribution Index revised January, 1964. Figures on net shipments relate to rolled steels products only. Shipments to consuming industries of castings, forgings and steel pipe are not included. [2] Includes building contractors, public and utility construction, structural steel fabricators, national defence and public works and utilities. [3] Includes appliances and utensils. Note: Some groupings are not entirely comparable to year 1964 due to change in classifications but in general the differences are minimal. [4] Excluding shipments for re-processing at maker's own plant. **Source: Primary Iron and Steel (41-001), D.B.S.**

[1] Production plus imports less re-exports. [2] Commencing January 1967, the value of new motor vehicles sold in Canada (as reported by manufacturers and distributors) was based on "actual cost to purchaser" rather than the suggested list price as in the past. **Sources: Motor Vehicle Shipments (42-002), New Motor Vehicle Sales (63-007), Trade of Canada, Imports (65-007), Exports (65-004), and Credit Statistics (61-004) D. B. S.**

---

[1] Gas types are included. [2] Includes producers' shipments for export. [3] In some cases these shipments are not at the factory level, and stocks at beginning of month plus production less shipments do not equal stocks at end of month. [4] Electric and other. [5] Excludes apartment type machines. [6] End of period. **Sources: Domestic Refrigerators and Freezers (43-001), Domestic Washing Machines and Clothes Dryers (43-002), Trade of Canada, Exports (65-004), Imports (65-007), D.B.S.**

[1] These totals include all generating agencies producing over ten million kilowatt hours per year. [2] These columns include all generating utilities and generating industries respectively, producing over ten million kilowatt hours per year. [3] Less imports. [4] Total net generation less net exports. Source: Electric Power Statistics, (57-001), D. B. S.

Note: Components may not add to totals due to rounding. Current figures in this table are preliminary and therefore subject to revision. [1] Includes crude oil, condensate and pentanes plus. [2] Deliveries to refineries and exports do not add to total new supply due to losses, other uses and inventory changes. [3] Gross new production by field less field flared and waste. [4] By gas utilities. **Sources: Crude Petroleum and Natural Gas Production (26-006), Refined Petroleum Products (45-004), Gas Utilities (55-002), D. B. S.**

---

[1] Barrels of 35 Canadian gallons. [2] Includes domestic and imported crude oil, condensate and pentanes plus received by Canadian refineries. [3] Refinery production (from crude oil, condensate and pentanes plus, and commingled propane/butane mixes) plus other materials used. [4] Includes deliveries of butane commingled in the crude stream in Saskatchewan and Alberta. [5] Includes inventories at end of period being held at gas plants and in storage caverns. [6] Includes stove oil, kerosene and tractor fuel. [7] Includes aviation gasoline and aviation turbo fuel. [8] Due to conceptual changes, the stock and sales series are not available on a comparable basis prior to June 1965. Includes propane and propane mixes and butane and butane mixes. [9] Includes petro-chemical feed stocks, naphtha specialties, coke, lubricating oil and grease, still gas and other products. **Source: Refined Petroleum Products (45-004), D. B. S.**

Note: Components may not add to totals due to rounding differences. [1] The data are collected for 1,400 municipalities and individual figures are available on request. [2] Historical data back to 1920 are available in "Historical Monthly Statistics" Catalogue No. 11-503, occasional. Starting with January 1966, the number of municipalities has been reduced to 56 following the annexation of the town of Riverside to the city of Windsor. **Source: Building Permits (64-001), D.B.S.**

---

[1] The coverage was extended to 507 municipalities in 1948, and as of 1965, stands at more than 1,400; minor revisions are still being required in the table, due to the non-receipt of returns from a few small places. No account is taken of the building activity outside of registration areas. Actual operations normally follow the granting of permits but a number of projects are not undertaken or abandoned. The amount depends upon the statement of the applicant and considerable change may develop before the completion of the operation. **Source: Building Permits (64-001), D.B.S.**

---

[1] A dwelling unit is defined as a structurally separate set of living quarters having its own entrance from outside of the building, or from a common passage inside. These data are the result of a nation-wide survey, for which the field work is carried out by the Central Mortgage and Housing Corporation. All metropolitan areas and urban centres with a population of 10,000 or more, along with certain other areas of high building activity, are enumerated completely each month. The remainder of the country is covered on a sample basis quarterly. [2] End of period. **Source: New Residential Construction (64-002), D. B. S.**

[1] Cash receipts from farming operations excluding supplementary payments. Excludes Newfoundland. [2] Represents participation payments made by the Canadian Wheat Board direct to producers on crops delivered in previous years. [3] Includes rye, flaxseed, rapeseed, soybeans and corn. [4] Includes clover and grass seed, hay, clover, greenhouse products, mustard seed, sunflower seed, hops, dry beans and dry peas and miscellaneous products. [5] Made under the authority of the Agricultural Stabilization Act. **Source: Farm Cash Receipts (21-001), D. B. S.**

Note: Components may not add to totals due to rounding. [1] The estimates for the current year are subject to revision since the factors used in the blow-up are based on the previous years' operations and may change when the current annual totals for all firms are known the following year. [2] Excluding trucks. [3] The total value of all machines shown in this table is greater than the value shown for farm machinery in Table 87 which covers wholesalers proper only. The above table covers all sales to users and includes sales by manufacturers through their agents as well as the sales of importers and other dealers made directly to users. Even though sales are to users, i.e. farmers, values are stated at wholesale prices, i.e. cost to dealers. **Source: Farm Implement and Equipment Sales (63-009), D.B.S.**

[1] These indexes are available for January, April and August only. [2] Average rates of cash wages paid per month to male hired help on farms. They reflect the average of the wages paid to all male farm help regardless of age and skill. Data are available for January, May and August only. [3] Exclusive of Newfoundland. Western grain prices used in the construction of the Index prior to August 1, 1967 are final prices. From August 1, 1967 to date, the western grain prices used in the Index are initial prices only for wheat, oats and barley. [4] Barley No. 1 feed; hogs grade "B" alive. [5] Price of 100 lbs. good steer as a percentage of the price of 100 lbs. live hog, grade B. [6] Price of 100 lbs. good steer as a percentage of the price of 100 lbs. good lamb. [7] Quotations refer to steers of all weights. [8] Grade "B" hogs. Sources: Price Index Numbers of Commodities and Services Used by Farmers (62-004); Farm Wages in Canada (21-002) Occasional; Coarse Grains Quarterly (22-001); Index Numbers of Farm Prices of Agricultural Products (62-003), D. B. S. and Livestock and Meat Trade Report, Dept. of Agriculture.

---

[1] Customs exports are adjusted to reflect actual physical movement of wheat flour from Canada. Data shown for the last current year are not so adjusted. [2] Production is calculated as the sum of the current manufacturers' shipments and the net change in manufacturers' inventories from the previous months. [3] Includes stocks held by manufacturers, wholesalers and other warehouses. [4] Includes baking and frying oils and fats. [5] Includes stocks held by manufacturers and other warehouses. [6] Includes beef stews and boiled dinners. [7] Includes fresh sausage, frankfurters, weiners and all other sausage. [8] Includes solid, coated, bulk, packages and novelties. [9] Includes tomato sauce, sauces for meat and fish and sauces, other. **Sources: Grain Milling Statistics (32-003), Oils and Fats (32-006),** Quarterly Reports, **Biscuits and Confectionery (32-016), Fruit and Vegetable Preparations (32-017)** and **Miscellaneous Food Preparations (32-018), Monthly Production of Soft Drinks (32-001),** Monthly Report, **Meat and Meat Preparations, D. ---

[1] Total value of retail trade seasonally adjusted includes sales of department stores, general merchandise stores, variety stores and all other stores. Due to changes in definition of department stores, the re-classification of some variety store firms and the introduction of general merchandise stores, formerly in all other stores, the unadjusted data for 1968 and subsequent years are not comparable with the data of previous years. **Source: Retail Trade (63-005), D.B.S.**

[1] Department store stocks at end of period at selling value. The sales and stocks data are revised series based on the results of the 1961 Census of Merchandising and Service Establishments. [2] Due to changes in definition of department stores and the introduction of general merchandise stores, formerly included in all other stores, the 1968 and 1969 figures are not comparable with the data of previous years. **Source: Department Store Sales and Stocks (63-002), D. B. S.**

*Credit extended mainly to individuals; includes unidentifiable amounts of credit extended for non-consumer purposes; excludes certain forms, mainly service credit extended by doctors, dentists, lawyers, pawnbrokers, travel companies, restaurants and personal credit for which no statistics are available. [1] Conditional sales agreements held in connection with the financing of retail purchases of consumers' goods and repaid in instalments. [2] Companies licensed under the Small Loans Act and affiliated compagnies engaged in making personal loans. [3] Cash loans with no conditional sales contract but usually repaid in instalments. [4] Personal loans other than those fully secured by marketable bonds and stocks and other than home improvement loans. [5] Loans other than secured loans and mortgage loans. [6] Figures for dates other than year-end are estimated on the basis of loans made by sixteen companies. [7] Sum of instalment credit of clothing, hardware and jewellery stores, fuel dealers and "all other trades" in Table 89. [8] Sum of charge accounts of clothing, hardware, independent grocery and combination stores, jewellery and general stores, fuel dealers, garages and filling stations and "all other trades" in Table 89. [9] Amount owing to oil companies ex commercial accounts. [10] Personal loans only. [11] The data for Quebec savings banks loans and motor vehicle dealers are not seasonally adjusted as no seasonality is present; these series are repeated in the unadjusted form. **Sources: Credit Statistics (61-004), D. B. S.; Bank of Canada, Dept. of Insurance, Dept. of Finance and Dept. of Agriculture.**

[1] The figures in the first four columns, i.e. all countries, United States, United Kingdom and all other countries, for the period April 1966 through July 1967 have been revised to account for delays in the receipts of customs documents. The revisions have not been extended to columns of figures for other countries, and their sum differs from the revised "all other countries" and "Total Imports" shown in this table. [2] Includes Belgium, Luxembourg, France, Germany, Italy and Netherlands.

[1] Column numbers refer to tables 93 and 94. [2] Includes special transaction-trade, not shown separately. [3] Includes scrap. [4] The annual index, being calculated separately, will differ slightly from the index obtained by the average of the twelve months. [5] Total imports revised to account for delays in the receipts of customs documents for the period April 1966 – July 1967 are: in 1966, April (822.4), May (938.4), June (900.6), July (792.8), August (818.2), Sept. (825.6), Oct. (936.2), Nov. (961.0), Dec. (872.0) and in 1967, Jan. (873.7), Feb. (766.2), March (851.8), April (944.5), May (1,053.8), June (977.4) and July (915.5).

[1] The trade figures have been adjusted to reflect more closely the timing of transactions, and to exclude commodities which are covered elsewhere or are not pertinent for balance of payments purposes. [2] Includes government transactions, n.o.p., personal and institutional remittances, miscellaneous income, insurance transactions and business services.

[1] Monthly averages for 1966 and 1967 may differ from the averages of the monthly data due to revisions which cannot be allocated by months. [2] Data in this table refer to class 1 and class 2 carriers which are railways with gross annual operating revenues of $500,000 or over. Includes operations of United States railways operating in Canada but excludes operations of Canadian railways in the United States. [3] Includes traffic interchanged between Canadian railways. **Sources: Railway Operating Statistics (52-003) monthly, and (52-206) annual, D.B.S.**

[1] Includes Class I and Class II carriers only. These are trucking firms having $100,000 or more gross annual operating revenues. [2] Includes Class I carriers only. These are carriers having $100,000 or more gross annual revenues primarily from inter-city and rural bus operations. Regular and chartered services are included. [3] Includes Class I carriers only. These are carriers having $100,000 or more gross annual revenues primarily from urban transit operations. Data are totals for motor bus, trolley coach, street car, subway and chartered services. **Sources: Motor Carriers-Freight, Quarterly (53-005), Passenger Bus Statistics (53-002) monthly, and Urban Transit (53-003) monthly, D.B.S.**

[1] Monthly averages for years 1965 and 1966 differ from the averages of the monthly data due to revisions which cannot be allocated by months. [2] Includes scheduled and non-scheduled carriers, groups I to IV. These groups cover all air carriers with gross operating revenues of over $60,000 annually prior to January, 1964 and over $100,000 annually since. [3] United States and other foreign carriers having scheduled services into and out of Canada. Excludes passengers in transit through Canada. [4] Cargo includes air freight and express but excludes mail and excess baggage. [5] Data prior to 1964 do not include bulk transportation. Because of survey limitations, data on bulk transportation after January 1, 1964 refer only to aircraft having a minimum authorized take-off weight on wheels in excess of 18,000 lbs. **Source: Civil Aviation (51-001), D. B. S.**

[1] Data from February 1967 onwards for net receipts include gathering and trunk lines. Prior to that date they include trunk lines only. [2] Excludes distribution systems. [3] Received from field and processing plants by transport systems. [4] Starting with 1967, operating revenues of crude oil products are no longer available separately; they are included with the crude oil operating revenues. **Sources: Oil Pipeline Transport (55-001) and Gas Utilities (55-002), D.B.S.**

---

[1]The statistics of failures in this table are limited to those bankruptcies filed under Federal legislation (the Bankruptcy and Winding-Up Acts) and does not include failures, sales or seizures carried out under other legislation. The figures for Atlantic provinces may be obtained by subtracting the sum of Quebec, Ontario, Prairie provinces and British Columbia from the total. [2]In the Bankruptcy Act of 1949, provision is made for proposals from insolvent persons. Agreements made under this method are not included with the statistics of bankruptcies. Liabilities of insolvent persons making proposals are not available. **Source: Commercial Failures (61-002) Quarterly, D. B. S.**

---

[1] Bank of Canada deposits are averages of the juridical days in the month shown while Bank of Canada notes and Canadian dollar deposit liabilities are averages of the 4 consecutive Wednesdays ending with the second last Wednesday in the previous month. [2] Mainly deposits of foreign banks. [3] Capital, rest fund and undivided profits as at the latest fiscal year-end. [4] Including issues payable in foreign currency. [5] Securities purchased direct from issuer with a term of less than one year at time of issue are classified as loans. [6] Excluding Canadian day-to-day loans. [7] Loans to grain dealers and exporters. [8] Loans to finance purchase of Canada Savings Bonds at time of issue. [9] Total of foreign funds, short term foreign investments and other foreign currency assets less foreign currency liabilities. [10] Including loans to instalment finance companies. **Source: Statistical Summary of Bank of Canada.**

---

[1] The definition of profits before taxes is based mainly on the accounting definition used by corporations. However, depletion charges are added back to net profits while Canadian dividends received are excluded from profits in order to avoid duplication. The term "profits" as used here means the total profits of all companies earning profits less the losses of all companies incurring losses. Estimates are based on profits as reported by sample of all companies incorporated in Canada (excluding government-owned companies). [2] As is evident from the above footnote, the data reporting unit is the company; the data are therefore not entirely comparable with data where the establishment is the reporting unit. [3] Includes also the furniture and furnishings industry. [4] Includes the primary metal, the metal fabricating, the machinery and the transportation equipment industries. [5] Includes tobacco products, leather and miscellaneous manufacturing industries. [6] Includes also storage and communication industries. [7] Includes agriculture, forestry, fishing and construction. **Source: Corporation Profits (61-003), D.B.S.**

[1] The number of stocks included has varied over the period; the totals shown in the column headings represent the current coverage. [2] The headings for "base metals" and "industrial mines" are not found in the Standard Industrial Classification. [3] Combines the industrials, utilities and finance common stocks. [4] Stocks included in industrial mines are listed on the exchanges as industrials, Their operations include smelting and refining. [5] Includes also the machinery industries (except electrical machinery) and the transportation equipment industries. [6] Stocks included in the mining index are for producing mines. **Sources: Price Movements (62-001), and Prices and Price Indexes (62-002), D.B.S.**

Note: The monthly data do not add to the annual totals which include supplementary payments arising from the closing of the accounts. [1] This statement does not include any disbursements other than regular budgetary expenditures. Excluded, for example, are all government outlays arising from increases in loans, advances and investments. [2] Under the Technical and Vocational Training Assistance Act. [3] Government contributions under the Hospital Insurance and Diagnostic Services Act. [4] Includes treatment and rehabilitation services. [5] For comparison purposes, annual figures for 1965-66 and 1966-67 represent "Grants to Universities — Payments to the Association of Universities and Colleges of Canada" (col. 6), "Capital Subsidies for the Construction of Commercial and Fishing Vessels" (Col. 8) and "Interim Payments to Railways to Maintain Freight Rates at Reduced Levels" (Col. 22). **Sources: Canada Gazette and Dept. of Finance.**

HISTORICAL REVIEW ON NON-FARM INCOME DISTRIBUTIONS*

A special report has been published summariz-ng the statistics on non-farm income distributions ollected by the Dominion Bureau of Statistics since he early 1950's. "Income Distributions, Incomes of on-farm families and Individuals in Canada, elected Years 1951 - 1965" (Cat. Nos. 13-529 and 3-529F) contains data for 1951, 1954, 1957, 1959, 961 and 1965. The data are based on small-scale ational sample surveys of private households — the ample size has varied from 5,600 to 10,400 family nits.

The latest year included in the report, 1965, eems a logical breaking point for the series as that articular survey covered farm families for the first ime. For the special historical report, 1965 data ere tabulated on a basis comparable to previous ears; the statistics exclude farmers and farm famiies, whereas the regular report "Income Distribuions by Size in Canada, 1965" (Cat. No. 13-528) resents 1965 data mainly on the new basis. It is he intention to continue the series on the exanded coverage. The next income report will conain 1967 income distributions for the expanded overage, i.e. including farmers and their families.

The special historical report presents the same asic data from three different points of view. Secion I contains tables that show the distribution of ndividuals and family units by size of their income n terms of current dollars. Section II presents simlar information by size of income in terms of constant (1961) dollars. The Consumer Price Index was used to deflate the incomes of all individuals and families in the various surveys and new distributions were compiled from these rebased figures. The constant dollar tables give an insight into changes in real incomes over the fourteen year period for different groups of individuals and families. Tables in Section III divide the income distribution into five equal parts (quintiles) and describe the characteristics of individuals or families who make up the quintiles. These tables, for example, show what kind of families belonged to the lowest fifth of the income distribution in 1951 and how the composition of the lowest quintile has changed over time.

In addition to describing income changes of individuals and families by characteristics such as age and sex of head or place of residence, each of the three sections contains data on the distribution of aggregate income between income size groups or quintiles. These data are basic for calculating measures of income inequality, an important aspect of income distribution analysis. Tables showing the income composition or sources of income going to each income group or quintile are also included in the three sections.

The following table is an example of the constant dollar tables published in Section II.

---

The table shows that real average incomes have risen substantially for families over the fourteen year period, and even more for unattached individuals. This rise has moved many unattached individuals out of the lowest income groups, e.g. instead of 70.1 per cent of unattached individuals having incomes below $2,000 in 1951, only 46.3 per cent were below this limit in 1965 — all measured in dollars of roughly equal purchasing value.

However, incomes have not been rising smoothly over this period; the largest increases seemed to have occured in the 1951 - 54 and 1961 - 65 periods. In the intervening period growth of real income was much slower and for some groups of unattached individuals for example average real incomes declined between 1954 and 1957.

The table does not provide clear cut evidence on significant narrowing of regional income differences, although average family incomes rose more in the Atlantic region than in the rest of the country.

On July 16, 1969, the Economic Council of Canada and the Dominion Bureau of Statistics jointly announced to the public availability of economic statistics from the **Canadian Socio-economic Information Management Systems** (CANSIM). The announcement is reproduced below, together with the foreword from two reference documents of interest to persons who wish to take advantage of CANSIM: the **CANSIM Summary Reference Index** and the **CANSIM Matrix Directory**. Both are available free on request.

Statistics Tapes for Public

OTTAWA – Canadian economic statistics on computer tapes are now available to the public.

This "data bank", containing the most widely used economic statistics of Canada, has been developed by the Dominion Bureau of Statistics and the Economic Council of Canada, and is probably the first government data bank system of its kind with potential for immediate retrieval of specific series.

Known as CANSIM (for Canadian Socio-economic Information Management System), it is designed to lower the cost of economic and social research for governments, for businesses and universities.

It will be operated by DBS using a new "third generation" computer (an IBM 360-65)

At the outset, the new system will have two main features:

1. CANSIM itself will handle the storage, updating and revision of an initial 7,000 time series of statistics. On request it will retrieve any one or all of these series on magnetic tape in various formats or print them as statistical tables on a high-speed computer printer. A "time series" consists of current and historical data on a particular subject, such as Gross National Product or one of its components.
2. Available to researchers with this data will be a tailor-made computer program, also on magnetic tape, for carrying out any one or several complex calculations with the data. Known as MASSAGER, this program was developed by the Economic Council of Canada and now is being supplied to researchers by the Bank of Canada for a nominal charge.

Since data tapes retrieved from CANSIM and the MASSAGER program can, with some modification, be used on other computers, those engaged in economic and social research now will be able to bypass one of the most costly and time-consuming stages of many research projects – the preparation of data in a form that can be read and manipulated by a computer.

Cost of obtaining a CANSIM tape will be 15 cents per time series with a minimum charge of $25. A standard tape containing the 2,500 time series in the Bureau's publication "Canadian Statistical Review" will be available for $100. The tapes will be supplied as quickly as possible after the Bureau receives a request. Operating costs of the system will be covered by the fees charged for the use of the system.

While the initial 7,000 time series may appear to represent a huge volume of information, it is actually a small fraction of the system's capacity. CANSIM has been designed to hold up to 1,500,000 time series efficiently and economically – and even that limit may increase in future with development of new equipment.

Meanwhile, the Bureau intends to expand the data base as time and resources permit. A "data base" is the information contained in a data bank.

As it stands now, CANSIM is in only its first stage of development. Potential expansion could provide, among other things:

– Automated production of statistical reports ready for printing, a development that would radically reduce typesetting and proofreading costs.

– The development of CANSIM as a statistical public utility, in which users equipped with remote computer consoles would have direct access to the system not only for retrieval of data but also for a limited range of calculations with such data.

No decision has yet been made to incorporate these latter features. The entire system has been designed for possible future development in a series of stages. Periodic reappraisal of the system and consultation with users are intended to be key elements in such future development of CANSIM.

Foreword to the CANSIM Summary Reference Index

This **Summary Reference Index** represents a key to the contents of CANSIM, the Canadian Socio-economic Information Management System,[1] and is the first step in locating and ordering time series from the system. The table of contents lists those publications for which data are now stored in CANSIM in full or in large part. For each publication, in turn, there is a modified table of contents which identifies the sets of series in CANSIM and gives for each set its identification number in CANSIM, that is, its CANSIM matrix number or numbers. A "matrix" in CANSIM is roughly equivalent to a "table" and contains a number of related time series. Additional sets of series will be stored in CANSIM as time and resources permit. Index supplements will be published accordingly.

---

[1] For a description and further information on the system, see also:

(a) "An Introduction to the Canadian Socio-economic Information Management System" (Free on request).

(b) "CANSIM: Operation Manual for Data Entry" (DBS Catalogue No. 12-530). Price $1.00.

(c) "CANSIM: Users' Manual for Data Retrieval and Manipulation" (DBS Catalogue No. 12-531). Price $1.50.

As the first step in ordering from DBS data which is stored in CANSIM, the user locates in this Index first the general area of interest and then the specific matrices. As step two, the CANSIM numbers at the right hand side of the page are used to locate the matrices in the **CANSIM Matrix Directory** which is a computer printout available from DBS without charge. In the **Matrix Directory** the matrices are listed in numerical order. Here the user finds for each matrix a title which gives a general description of the series included, the data source and, in some cases, a matrix note providing additional information of importance.

As step three, users select matrices in which they are interested, note the corresponding CANSIM matrix numbers, and use these numbers to order from DBS a **CANSIM Series Directory.** This is a computer printout for which users pay a small charge to cover the cost of printing. The **Series Directory** contains titles and other descriptive detail for all series in the matrix. It also contains the unique series identifiers (CANSIM numbers) which must be used in ordering data from DBS. The fourth step, the actual ord ring of the data, is described in detail in the **CANSIM Users' Manual** cited as (c) in the footnote on page iv.

In addition to the CANSIM identification numbers, readers will note that a second identification number is shown both in this Index and in the **Series Directory,** i.e. the "MASSAGER" identification number. The purpose and use of this second number is described in detail in the **CANSIM Users' Manual.**

Foreword to the CANSIM Matrix Directory

The matrix titles, sources and notes included in this Directory cover all time series in the CANSIM base as of the date of the printout. Supplements will be released as the CANSIM base is expanded.

Descriptive detail given for a matrix (roughly equivalent to "table"), used to identify the series in the matrix, includes the frequency and units, the base in the case of index numbers, whether seasonally unadjusted or adjusted, etc. Where a major revision has occurred but the historical unrevised series continue to be of interest, these may be included with a "T" for "terminated".

For each matrix there is available at cost of reproduction a CANSIM Series Directory which provides detailed information for all series included. A sample follows:

---

[1] The occupational status of the majority of the persons destined to the labour force is determined by immigration officials by an examination of documentary evidence provided by the immigrants. The classification of occupations is similar to that used in the 1961 Census; see Occupational Classification Manual, Census of Canada, 1961, Catalogue Number 12-506. [2] Includes logging, fishing, trapping and hunting. [3] Includes mechanical and construction. [4] Includes a small number in non-specified occupations. [5] Does not include students entering Canada on students' visas. [6] Includes also retired persons, elderly dependents, fiancés or fiancées and other unspecified persons not intending to enter the labour force. **Source: Quarterly Bulletin, Department of Manpower and Immigration.**

---

[1] Includes change in farm inventories. The seasonally adjusted data include an arbitrary smoothing of crop production, standard seasonal adjustments for withdrawals of grain from farm stocks and the change in livestock items. Because of arbitrary elements, too precise an interpretation should not be given to the series. [2] Includes residual error of estimate. **Source: at bottom of Table 14.**

---

[1] Excludes inmates of institutions, members of the armed services, Indians living on reserves and residents of the Yukon and Northwest Territories. The estimates are derived from a sample survey and are subject to sampling error. In general, the smaller the estimate, the larger is the relative sampling error. [2] The labour force as a percentage of the population 14 years of age and over. [3] The unemployed as a percentage of the labour force. **Source: Labour Force Bulletin, (71-001), D.B.S.**

[1] See footnote 1, table 19. Labour force obtained as the sum of employed and unemployed from tables 21 and 23. [2] Canada totals, obtained by summing the seasonally adjusted data for the five regions, are usually different from the totals given on page S-1. The small differences result from the seasonal adjustment of the Canada and regional data having been carried out independently of each other. **Source: The Labour Force, (71-001) D. B. S.**

---

[1] In calculating time loss, only the workers directly affected by the strike or lockout are taken into account; time lost by workers indirectly affected, such as those laid off as a result of a work stoppage is not included. [2] The statistics for individual industries exclude strikes and lockouts involving fewer than 100 workers; the total, however, includes all work stoppages. The agricultural, finance, insurance and real estate and public administration and defence industries are not shown separately; should strikes occur in these industries, they also will be shown in the total. [3] Includes miscellaneous manufacturing industries. [4] Includes also publishing and allied industries. [5] Includes also the storage and communication industries. **Source: Labour Gazette, Department of Labour.**

*Revised monthly data will be available later.

*Les figures mensuelles revisées seront disponibles à une date ultérieure.

[1] The data in Tables 28 to 35 are based on reports from firms employing 20 persons or more in any month of the year and relate to the last pay periods in the month. Greater industrial and area detail and more explanatory notes are given in the source publication named below. [2] Excludes agriculture, fishing, trapping and public administration and defence. [3] Includes storage, electric power, gas and water utilities. [4] Excludes domestic service. **Source: Employment and Average Weekly Wages and Salaries, (72-002), D.B.S.**

[1] See footnote 1 and source in Table 28. [2] Employment indexes in total manufacturing and in its total durable and non-durable components are given in Table 28. [3] In addition to those listed, tobacco products; knitting mills; printing, publishing and allied; and miscellaneous manufacturing industries are included in non-durable manufacturing. [4] Except machinery and transportation equipment industries.

[1] The data for the current year are subject to revision. [2] Includes gold. [3] Consists of general wholesale index less animal products and vegetable products component groups. [4] Consists of iron products and non-ferrous metals products component groups less gold. [5] These two series comprise the general wholesale index. [6] Excludes gold. **Source: Prices and Price Indexes (62-002), D. B. S.**

---

[1] Total commodities and services does not add up to 100 per cent; the portion of shelter which includes taxes and mortgage interest, and amounts to 8 per cent, is excluded. [2] These indexes measure within each city the percentage change in consumer prices from the base period to the subsequent time periods. They cannot be used to compare levels of prices between cities. Source: Prices and Price Indexes (62-002), D.B.S.

Table 40: total inventories, shipments and orders in manufacturing based on the 1960 standard industrial classification (million dollars)

---

[1] Monthly shipments represent an estimated projection of the latest available Census of Manufacturers values except for those industries whose long-term contracts result in large intermittent shipments; for these a monthly estimate of work put in place has been substituted. [2] Total manufacturing inventory owned by manufacturers including warehouse stocks. [3] Total new orders received during the period at estimated selling value, net of cancellations, regardless of whether the orders will be filled from stock or as a result of activity during the same month. [4] Annual figures for inventories and unfilled orders are end of December values.

Source: Inventories, Shipments and Orders in Manufacturing Industries (31-001), D.B.S.

---

[1] Monthly shipments represent an estimated projection of the latest available Census of Manufacturer's values except for those industries whose long term contracts result in large intermittent shipments; for these a monthly estimate of work put in place has been estimated. **Source: Inventories, Shipments and Orders in Manufacturing Industries (31-001), D.B.S.**

---

[1] Starting with January 1968, production is manufacturers' production; prior to that date production was indicated by the use of excise duty stamps. [2] Intended for cigarettes. [3] Includes sales to wholesalers or retailers. [4] Subject to Excise Tax. [5] Includes sales for ships' stores and for export. [6] End of period. [7] Includes smoking, chewing and twist. **Sources: Tobacco and Tobacco Products Statistics Quarterly (32-014), D. B. S.; and Department of National Revenue.**

[1] Prior to 1964 data are not entirely comparable since they are on a production basis. [2] Includes slims and stretch pants. [3] Made from woven fabrics: shorts. [4] Starting with first quarter of 1968, "women's and Misses' category" becomes "Women's, Misses' and Juniors'". Data are not changed. **Source: Garment Shipments (34-001), D. B. S.**

[1] Total pulp production covers "screenings" which are already included in exports. "Screenings" are excluded throughout from mechanical and chemical pulp. [2] 100 cu. ft. of solid wood; pulpwood produced for domestic use and excluding exports, but including receipts of purchased roundwood. [3] Customs exports. [4] Mill shipments destined for export. **Sources: Pulpwood and Wood Residue Statistics (25-001), Trade of Canada, Exports (65-004), D.B.S; Bulletins of Canadian Pulp and Paper Association and Newsprint Association of Canada.**

[1] Data compiled according to the Steel Distribution Index revised January, 1964. Figures on net shipments relate to rolled steels products only. Shipments to consuming industries of castings, forgings and steel pipe are not included. [2] Includes building contractors, public and utility construction, structural steel fabricators, national defence and public works and utilities. [3] Includes appliances and utensils. Note: Some groupings are not entirely comparable to year 1964 due to change in classifications but in general the differences are minimal. [4] Excluding shipments for re-processing at maker's own plant. **Source: Primary Iron and Steel (41-001), D. B. S.**

---

[1] Production plus imports less re-exports. [2] Commencing January 1967, the value of new motor vehicles sold in Canada (as reported by manufacturers and distributors) was based on "actual cost to purchaser" rather than the suggested list price as in the past. **Sources: Motor Vehicle Shipments (42-002), New Motor Vehicle Sales (63-007), Trade of Canada, Imports (65-007), Exports (65-004), and Credit Statistics (61-004) D.B.S.**

---

[1] Gas types are included. [2] Includes producers' shipments for export. [3] In some cases these shipments are not at the factory level, and stocks at beginning of month plus production less shipments do not equal stocks at end of month. [4] Electric and other. [5] Excludes apartment type machines. [6] End of period. **Sources: Domestic Refrigerators and Freezers (43-001), Domestic Washing Machines and Clothes Dryers (43-002), Trade of Canada, Exports (65-004), Imports (65-007), D.B.S.**

[1] These totals include all generating agencies producing over ten million kilowatt hours per year. [2] These columns include all generating utilities and generating industries respectively, producing over ten million kilowatt hours per year. [3] Less imports. [4] Total net generation less net exports. **Source: Electric Power Statistics, (57-001), D. B. S.**

Note: Components may not add to totals due to rounding. Current figures in this table are preliminary and therefore subject to revision. [1] Includes crude oil, condensate and pentanes plus. [2] Deliveries to refineries and exports do not add to total new supply due to losses, other uses and inventory changes. [3] Gross new production by field less field flared and waste. [4] By gas utilities. **Sources: Crude Petroleum and Natural Gas Production (26-006), Refined Petroleum Products (45-004), Gas Utilities (55-002), D. B. S.**

---

[1] Barrels of 35 Canadian gallons. [2] Includes domestic and imported crude oil, condensate and pentanes plus received by Canadian refineries. [3] Refinery production (from crude oil, condensate and pentanes plus, and commingled propane/butane mixes) plus other materials used. [4] Includes deliveries of butane commingled in the crude stream in Saskatchewan and Alberta. [5] Includes inventories at end of period being held at gas plants and in storage caverns. [6] Includes stove oil, kerosene and tractor fuel. [7] Includes aviation gasoline and aviation turbo fuel. [8] Due to conceptual changes, the stock and sales series are not available on a comparable basis prior to June 1965. Includes propane and propane mixes and butane and butane mixes. [9] Includes petro-chemical feed stocks, naphtha specialties, coke, lubricating oil and grease, still gas and other products. **Source: Refined Petroleum Products (45-004), D. B. S.**

Note: Components may not add to totals due to rounding differences.

[1] Data are on a gross basis i.e. they do not take account of cancellations or alterations of loans after initial approval.

[2] Agency loans (loans made by other lending institutions on behalf of C.M.H.C.) are included under C.M.H.C.

[3] Includes fraternal and mutual benefit societies, Quebec savings banks and, since May 1967, chartered banks.

Note: Components may not add to totals due to rounding differences. [1] The data are collected for 1,400 municipalities and individual figures are available on request. [2] Historical data back to 1920 are available in "Historical Monthly Statistics" Catalogue No. 11-503, occasional. Starting with January 1966, the number of municipalities has been reduced to 56 following the annexation of the town of Riverside to the city of Windsor. **Source: Building Permits (64-001), D.B.S.**

---

[1] The coverage was extended to 507 municipalities in 1948, and as of 1965, stands at more than 1,400; minor revisions are still being required in the table, due to the non-receipt of returns from a few small places. No account is taken of the building activity outside of registration areas. Actual operations normally follow the granting of permits but a number of projects are not undertaken or abandoned. The amount depends upon the statement of the applicant and considerable change may develop before the completion of the operation. **Source: Building Permits (64-001), D.B.S.**

---

[1] A dwelling unit is defined as a structurally separate set of living quarters having its own entrance from outside of the building, or from a common passage inside. These data are the result of a nation-wide survey, for which the field work is carried out by the Central Mortgage and Housing Corporation. All metropolitan areas and urban centres with a population of 10,000 or more, along with certain other areas of high building activity, are enumerated completely each month. The remainder of the country is covered on a sample basis quarterly. [2] End of period. **Source: New Residential Construction (64-002), D. B. S.**

Note: Components may not add to totals due to rounding. [1] The estimates for the current year are subject to revision since the factors used in the blow-up are based on the previous years' operations and may change when the current annual totals for all firms are known the following year. [2] Excluding trucks. [3] The total value of all machines shown in this table is greater than the value shown for farm machinery in Table 87 which covers wholesalers proper only. The above table covers all sales to users and includes sales by manufacturers through their agents as well as the sales of importers and other dealers made directly to users. Even though sales are to users, i.e. farmers, values are stated at wholesale prices, i.e. cost to dealers. **Source: Farm Implement and Equipment Sales (63-009), D.B.S.**

[1] These indexes are available for January, April and August only. [2] Average rates of cash wages paid per month to male hired help on farms. They reflect the average of the wages paid to all male farm help regardless of age and skill. Data are available for January, May and August only. [3] Exclusive of Newfoundland. Western grain prices used in the construction of the Index prior to August 1, 1967 are final prices. From August 1, 1967 to date, the western grain prices used in the Index are initial prices only for wheat, oats and barley. [4] Barley No. 1 feed; hogs grade "B" alive. [5] Price of 100 lbs. good steer as a percentage of the price of 100 lbs. live hog, grade B. [6] Price of 100 lbs. good steer as a percentage of the price of 100 lbs. good lamb. [7] Quotations refer to steers of all weights. [8] Grade "B" hogs. **Sources: Price Index Numbers of Commodities and Services Used by Farmers (62-004); Farm Wages in Canada (21-002) Occasional; Coarse Grains Quarterly (22-001); Index Numbers of Farm Prices of Agricultural Products (62-003), D. ---

[1] Customs exports are adjusted to reflect actual physical movement of wheat flour from Canada. Data shown for the last current year are not so adjusted. [2] Production is calculated as the sum of the current manufacturers' shipments and the net change in manufacturers' inventories from the previous months. [3] Includes stocks held by manufacturers, wholesalers and other warehouses. [4] Includes baking and frying oils and fats. [5] Includes stocks held by manufacturers and other warehouses. [6] Includes beef stews and boiled dinners. [7] Includes fresh sausage, frankfurters, weiners and all other sausage. [8] Includes solid, coated, bulk, packages and novelties. [9] Includes tomato sauce, sauces for meat and fish and sauces, other. **Sources: Grain Milling Statistics (32-003), Oils and Fats (32-006),** Quarterly Reports, **Biscuits and Confectionery (32-016), Fruit and Vegetable Preparations (32-017) and Miscellaneous Food Preparations (32-018), Monthly Production of Soft Drinks (32-001),** Monthly Report, **Meat and Meat Preparations, D. ---

[1] Total value of retail trade seasonally adjusted includes sales of department stores, general merchandise stores, variety stores and all other stores. Due to changes in definition of department stores, the re-classification of some variety store firms and the introduction of general merchandise stores, formerly in all other stores, the unadjusted data for 1968 and subsequent years are not comparable with the data of previous years. **Source: Retail Trade (63-005), D.B.S.**

[1] Department store stocks at end of period at selling value. The sales and stocks data are revised series based on the results of the 1961 Census of Merchandising and Service Establishments. [2] Due to changes in definition of department stores and the introduction of general merchandise stores, formerly included in all other stores, the 1968 and 1969 figures are not comparable with the data of previous years. Source: **Department Store Sales and Stocks (63-002), D. B. S.**

*Credit extended mainly to individuals; includes unidentifiable amounts of credit extended for non-consumer purposes; excludes certain forms, mainly service credit extended by doctors, dentists, lawyers, pawnbrokers, travel companies, restaurants and personal credit for which no statistics are available. [1] Conditional sales agreements held in connection with the financing of retail purchases of consumers' goods and repaid in instalments. [2] Companies licensed under the Small Loans Act and affiliated campagnies engaged in making personal loans. [3] Cash loans with no conditional sales contract but usually repaid in instalments. [4] Personal loans other than those fully secured by marketable bonds and stocks and other than home improvement loans. [5] Loans other than secured loans and mortgage loans. [6] Figures for dates other than year-end are estimated on the basis of loans made by sixteen companies. [7] Sum of instalment credit of clothing, hardware and jewellery stores, fuel dealers and "all other trades" in Table 89. [8] Sum of charge accounts of clothing, hardware, independent grocery and combination stores, jewellery and general stores, fuel dealers, garages and filling stations and "all other trades" in Table 89. [9] Amount owing to oil companies ex commercial accounts. [10] Personal loans only. [11] The data for Quebec savings banks loans and motor vehicle dealers are not seasonally adjusted as no seasonality is present; these series are repeated in the unadjusted form. **Sources: Credit Statistics (61-004), D. B. S.; Bank of Canada, Dept. of Insurance, Dept. of Finance and Dept. of Agriculture.**

[1] The figures in the first four columns, i.e. all countries, United States, United Kingdom and all other countries, for the period April 1966 through July 1967 have been revised to account for delays in the receipts of customs documents. The revisions have not been extended to columns of figures for other countries, and their sum differs from the revised "all other countries" and "Total Imports" shown in this table. [2] Includes Belgium, Luxembourg, France, Germany, Italy and Netherlands. **Source: Trade of Canada, Imports (65-007), D. B. S.**

Table 93: merchandise exports, by commodity, based on the standard commodity classification[1] (million dollars)

[1] Column numbers refer to tables 93 and 94. [2] Includes special transaction-trade, not shown separately. [3] Includes scrap. [4] The annual index, being calculated separately, will differ slightly from the index obtained by the average of the twelve months. [5] Total imports revised to account for delays in the receipts of customs documents for the period April 1966 – July 1967 are: in 1966, April (822.4), May (938.4), June (900.6), July (792.8), August (818.2), Sept. (825.6), Oct. (936.2), Nov. (961.0), Dec. (872.0) and in 1967, Jan. (873.7), Feb. (766.2), March (851.8), April (944.5), May (1,053.8), June (977.4) and July (915.5).

[1] Monthly averages for 1966 and 1967 may differ from the averages of the monthly data due to revisions which cannot be allocated by months. [2] Data in this table refer to class 1 and class 2 carriers which are railways with gross annual operating revenues of $500, 000 or over. Includes operations of United States railways operating in Canada but excludes operations of Canadian railways in the United States. [3] Includes traffic interchanged between Canadian railways. **Sources: Railway Operating Statistics (52-003) monthly, and (52-206) annual, D. B. S.**

[1] Includes Class I and Class II carriers only. These are trucking firms having $100, 000 or more gross annual operating revenues. [2] Includes Class I carriers only. These are carriers having $100, 000 or more gross annual revenues primarily from inter-city and rural bus operations. Regular and chartered services are included. [3] Includes Class I carriers only. These are carriers having $100, 000 or more gross annual revenues primarily from urban transit operations. Data are totals for motor bus, trolley coach, street car, subway and chartered services. **Sources: Motor Carriers-Freight, Quarterly (53-005), Passenger Bus Statistics (53-002) monthly, and Urban Transit (53-003) monthly, D. B. S.**

[1] Monthly averages for years 1965 and 1966 differ from the averages of the monthly data due to revisions which cannot be allocated by months. [2] Includes scheduled and non-scheduled carriers, groups I to IV. These groups cover all air carriers with gross operating revenues of over $60,000 annually prior to January, 1964 and over $100,000 annually since. [3] United States and other foreign carriers having scheduled services into and out of Canada. Excludes passengers in transit through Canada. [4] Cargo includes air freight and express but excludes mail and excess baggage. [5] Data prior to 1964 do not include bulk transportation. Because of survey limitations, data on bulk transportation after January 1, 1964 refer only to aircraft having a minimum authorized take-off weight on wheels in excess of 18,000 lbs. **Source: Civil Aviation (51-001), D. B. S.**

[1] Data from February 1967 onwards for net receipts include gathering and trunk lines. Prior to that date they include trunk lines only. [2] Excludes distribution systems. [3] Received from field and processing plants by transport systems. [4] Starting with 1967, operating revenues of crude oil products are no longer available separately; they are included with the crude oil operating revenues. **Sources: Oil Pipeline Transport (55-001) and Gas Utilities (55-002), D.B.S.**

---

[1] The statistics of failures in this table are limited to those bankruptcies filed under Federal legislation (the Bankruptcy and Winding-Up Acts) and does not include failures, sales or seizures carried out under other legislation.The figures for Atlantic provinces may be obtained by subtracting the sum of Quebec, Ontario, Prairie provinces and British Columbia from the total. [2] In the Bankruptcy Act of 1949, provision is made for proposals from insolvent persons. Agreements made under this method are not included with the statistics of bankruptcies. Liabilities of insolvent persons making proposals are not available. **Source: Commercial Failures (61-002) Quarterly, D. B. S.**

---

[1] Bank of Canada deposits are averages of the juridical days in the month shown while Bank of Canada notes and Canadian dollar deposit liabilities are averages of the 4 consecutive Wednesdays ending with the second last Wednesday in the previous month. [2] Mainly deposits of foreign banks. [3] Capital, rest fund and undivided profits as at the latest fiscal year-end. [4] Including issues payable in foreign currency. [5] Securities purchased direct from issuer with a term of less than one year at time of issue are classified as loans. [6] Excluding Canadian day-to-day loans. [7] Loans to grain dealers and exporters. [8] Loans to finance purchase of Canada Savings Bonds at time of issue. [9] Total of foreign funds, short term foreign investments and other foreign currency assets less foreign currency liabilities. [10] Including loans to instalment finance companies. **Source: Statistical Summary of Bank of Canada.**

---

[1] The definition of profits before taxes is based mainly on the accounting definition used by corporations. However, depletion charges are added back to net profits while Canadian dividends received are excluded from profits in order to avoid duplication. The term "profits" as used here means the total profits of all companies earning profits less the losses of all companies incurring losses. Estimates are based on profits as reported by sample of all companies incorporated in Canada (excluding government-owned companies). [2] As is evident from the above footnote, the data reporting unit is the company; the data are therefore not entirely comparable with data where the establishment is the reporting unit. [3] Includes also the furniture and furnishings industry. [4] Includes the primary metal, the metal fabricating, the machinery and the transportation equipment industries. [5] Includes tobacco products, leather and miscellaneous manufacturing industries. [6] Includes also storage and communication industries. [7] Includes agriculture, forestry, fishing and construction. **Source: Corporation Profits (61-003), D. B. S.**

---

[1] The number of stocks included has varied over the period; the totals shown in the column headings represent the current coverage. [2] The headings for "base metals" and "industrial mines" are not found in the Standard Industrial Classification. [3] Combines the industrials, utilities and finance common stocks. [4] Stocks included in industrial mines are listed on the exchanges as industrials, Their operations include smelting and refining. [5] Includes also the machinery industries (except electrical machinery) and the transportation equipment industries. [6] Stocks included in the mining index are for producing mines. **Sources: Price Movements (62-001), and Prices and Price Indexes (62-002), D.B.S.**

Note: The monthly data do not add to the annual totals which include supplementary payments arising from the closing of the accounts. [1] This statement does not include any disbursements other than regular budgetary expenditures. Excluded, for example, are all government outlays arising from increases in loans, advances and investments. [2] Under the Technical and Vocational Training Assistance Act. [3] Government contributions under the Hospital Insurance and Diagnostic Services Act. [4] Includes treatment and rehabilitation services. [5] For comparison purposes, annual figures for 1965-66 and 1966-67 represent "Grants to Universities — Payments to the Association of Universities and Colleges of Canada" (col. 6), "Capital Subsidies for the Construction of Commercial and Fishing Vessels" (Col. 8) and "Interim Payments to Railways to Maintain Freight Rates at Reduced Levels" (Col. 22). [7] As of April 1, 1969 Industry and Trade and Commerce are combined.

Reprints and Publications

Reprints of articles and technical notes are available free on request to the General Time Series Staff, DBS.

A list of other publications available appears on the inside back cover.

About the Tables

Changes occur from time to time which affect time series published in this Review. For all series included, historical data are included in CANSIM (Canadian Socio-economic Information Management System), which is the DBS computerized time series data bank, and are revised and updated immediately information becomes available. In instances where the continuity of a series is seriously affected by changes such as in the Standard Industrial Classification, CANSIM contains both the unrevised historical data (as a closed file), and the new revised series with its shorter history.

The MCD — Months for Cyclical Dominance, shown for seasonally adjusted series, is explained on page 8.

Changes in this Issue

A new cover design and a number of minor changes in presentation have been made starting with this September 1969 issue. More changes are contemplated in the future.

New Motor Vehicle Sales.— The unadjusted data for New Motor Vehicle Sales in units (Table 56) have been revised for the period 1953 to 1960 inclusive. The seasonally adjusted data for these series (page S-5) have been revised from 1953 to date. The revisions will be published historically in the 1968 Annual Supplement to the Review.

Retail Trade.— The seasonally adjusted data for department store sales, which were not available previously for the period January 1968 to date, are included in this issue. The data are based on the department store definition adopted for use in the 1966 Census and are not fully comparable with data of previous years. Details of this definition are published in the monthly report "Department Store Sales and Stocks", Catalogue No. 63-002.

Annual Supplement to the Review. — The eighth issue of the Annual Supplement to the Canadian Statistical Review (1968) will be released in late September 1969. The Supplement, which is now a semi-automated publication, carries the latest revised figures and the complete historical record of the selected economic indicators appearing in the S-pages of the monthly Review.

RETAIL TRADE, INTERCENSAL REVISIONS, 1961 - 66

I.E. Altman*

Introduction

In late June, 1969, the first attempt to produce intercensal revisions of retail trade[1] estimates by computer came off the machine in a finished, ready-to-print package of nearly 200 pages. The computer programme was designed to produce a five-year time series of data on retail trade in Canada, revised to 1966 Census levels and broken down by chain and independent stores, by kinds of business, by provinces and by months for the period 1952-66. The data for 1961 — the previous Census year — were not revised but merely restated for the benefit of users.

This article will attempt to provide a brief summary of the results of the intercensal revisions[2] and to analyze some of the more interesting trends by discussing: the background to the intercensal revisions; changes in the 1966 Census; summary of results, 1961-66; chains vs. independent stores; and seasonal trends.

Background to the Intercensal Revisions

Measurements of retail trade activity in Canada have been undertaken in two ways in the past: first, through a decennial (1930-61) and more recently through a quinquennial (1966) Census of Merchandising and Services; and second, by a monthly sample survey of **major** kinds of business in Canada, stratified by province and by chain and independent stores. In the intercensal period, retail trade estimates are based on the results of a sample of retail locations selected at random — within the strata designated above — from the total retail trade "universe" of the previous Census. For example, retail trade data during the years 1961 to 1966 were derived from a sample drawn from the 1961 Census universe and the monthly estimates linked to a Census base.

Customarily, following each Census, estimates for the Census year obtained from the monthly sample survey are corrected to reflect the new levels of retailing activity. In addition, data published since the previous Census are adjusted by distributing the Census year "difference" proportionately over the preceding years in the intercensal period.[3]

Since the monthly sample is stratified by major kinds of business only, it is necessary to combine the more than 90 trades published in the Census in such ways as will ensure continuity of the current series throughout the intercensal period and, where possible, from one such period to the next. This is not always possible; witness the "break" in the retail trade series in 1961 due to changes in the Standard Industrial Classification which caused a reshuffling of various trades between the retail, wholesale and services sectors.

The problem of revising the 1961-66 estimates of retail trade was approached in the same general way as in the past — with one important difference, i.e., the use of the computer.

Changes in the 1966 Census

Although no classification changes occurred since 1961 to shift trades into or out of the retail sector, some important definitional changes were made in the course of the 1966 Census which resulted in shifts **within** the existing retail trade universe. To preserve the continuity of the series for the entire intercensal period, it was necessary that the 1966 Census data be reassembled in terms of the applicable 1961 definitions. In doing so, the principal problem areas were found to be department stores and a new classification, "grocery, confectionery and sundries stores".

In the 1961 Census, there were approximately 14 trades in the food group, four of which comprised "grocery and combination stores" in the current series, with the remaining ten forming the "all other food stores" classification. The latter grouping included, among others, the Census trade "confectionery stores". For 1966, a new trade was introduced to the food group: "grocery, confectionery and sundries stores," where no one item exceeded 60 per cent of the total store sales. With the addition of this trade, DBS officially recognized the existence and growth of a new type of retailing activity — the so-called "convenience" store.

An analysis of the 1961 and 1966 Census data indicated that the new trade included stores classified in 1961 as "grocery stores, without fresh meat" and as "confectionery stores". (However, the exact number which stemmed from each category was — and is — unknown.) The following table shows the number of stores in the affected trades as reported in the 1961 and 1966 Censuses:

Trade	1961	1966
Grocery stores, with fresh meat	10,817	12,748
Grocery stores, without fresh meat	21,708	13,468
Grocery, confectionery and sundries stores	—	10,709
Confectionery stores	5,635	—
Candy, nut stores	394	—
Candy, nut, confectionery stores	—	959
Totals	**38,554**	**37,884**

The complication arose from the fact that, in the sample survey, grocery stores formed part of "grocery and combination stores", whereas confectionery stores were found among "all other food stores". Therefore, the 1966 Census figures could not be used for the intercensal revisions without destroying the comparability of one or the other of the two series.

---

[1] See definitions on page 6.

[2] Catalogue No. 63-517, Dominion Bureau of Statistics, to be published in October, 1969.

[3] Intercensal revisions are also made to the estimates published each month **following** a Census, i.e. prior to actual completion of the Census tabulations. Revisions for 1966-68 are now being processed, with an anticipated release date of November 30, 1969.

* Mr. Altman is Chief of Retail Trade Section in the Merchandising and Services Division of the Dominion Bureau of Statistics.

To obtain 1966 benchmarks for the 1961-66 revisions, therefore, the confectionery store sales in 1966 were estimated on the basis of the trend line of the total for all food stores other than grocery and combination stores. The result was then transferred from "grocery and combination stores" to "other food stores" and the new totals — for the purpose of these revisions only — replaced the 1966 Census figures.

A new department store definition, adopted for use in the 1966 Census, caused marked changes in this and other series, including general stores, variety stores and all other stores. The principal features of the new definition were: (1) it was applied at the location level rather than at the establishment level and **the department store operations of non-department store firms could therefore be included in the department store series**; (2) all non-department store operations of department store firms, including mail order and catalogue sales offices, were reclassified to more appropriate kinds of business, primarily on the basis of commodity content; and (3) concessions operated in department store locations were — with one exception — included in the location totals, rather than in their specific kinds of business.

The 1966 department store totals based on the 1961 definition of department stores were obtained by reversing each of these three features in turn.

Summary of Results

Tables 1, 2 and 3 provide a broad summary of retailing activity in Canada during the 1961-66 period. Retail sales climbed to nearly $23 billion during 1966, 41.1 per cent higher than in 1961. The average annual increase from one Census to the next was approximately 8.2 per cent, including price increases. However, as indicated below, the increase was unevenly distributed among the various kinds of business and among the ten provinces.

During the 1961-66 period, Canada's gross national product rose by 55.1 per cent, personal income increased by 51.0 per cent and personal disposable income by 48.3 per cent. On the other hand, the growth of retail trade was approximately the same as that of personal consumer expenditure (42.4 per cent) and somewhat in excess of that of per capita personal income (37.6 per cent). The ratio of retail sales per capita to personal consumer expenditure remained almost constant, despite strong growth in the consumption of services. Growth in service trades (as measured in the Census of Merchandising and Services) was 53.9 per cent.[4]

Retail trade by kind of business. — Grocery and combination stores remained the single largest kind of business in retail trade, accounting for sales of $5,207,550,000 in 1966. However, the growth of sales by grocery and combination stores fell below the rate of increase of total retail trade and consequently such stores failed to increase their market share from 1961 to 1966.

Motor vehicle dealers, on the other hand, registered the largest percentage gain in sales (66.9 per cent) and increased their share of the retail market by nearly 18 per cent. Sales of variety stores, bolstered by the expanding volume of business generated by the department store outlets of variety chains, rose by 57.7 per cent. Above-average rates of growth were also experienced by family clothing stores, men's clothing stores and drug stores. On the other hand, sales of service stations and garages, hardware stores and all other food stores rose less than total retail trade. General stores, possibly reacting to growth in the variety store and family clothing store categories, registered the only absolute decline and the most sizeable loss of market share (42.1 per cent).

The share of the market data (Table 3) reveal some interesting developments during the 1961-66 period. Department stores, while retaining their third-place position (behind grocery and combination stores and motor vehicle dealers), fell from 9.6 per cent to 9.4 per cent of total retail sales. The growing emphasis on the acquisition of durable goods appears to have been dissipated to a considerable extent in the fast-paced automotive market. Despite a more affluent society and rising prices, the share of the market held by furniture, television and appliance stores fell from 3.6 per cent to 3.2 per cent. Hardware stores also declined from a 1.9 per cent to a 1.6 per cent share of retail trade.

Retail trade by province. — Four provinces recorded increases in retail trade in excess of the national average: British Columbia, Quebec, Saskatchewan and Newfoundland. Nova Scotia experienced the lowest growth-rate of any province — 29.8 per cent — and Manitoba was not far behind with a 31.2 per cent record of growth for the first half of the decade.

Quebec and Ontario continued to dominate retail sales, together accounting for nearly two thirds of the Canadian retail trade total. During the intercensal period, however, Quebec's share of the market increased slightly while Ontario's fell, reflecting improvements in the standard of living in the former province and the increasing diversity of retailing activity beyond the bounds of the latter. In addition to Quebec, other provinces increasing their share of the retail trade market were British Columbia and Saskatchewan. Newfoundland's share was unchanged at 1.8 per cent.

Chains vs. Independent Stores

Sales of chain store firms during the 1961-66 period expanded unevenly but persistently across a broad front. In all but two provinces, chain store growth proceeded at a faster rate than either department stores or independent stores. In Prince Edward Island and Quebec, however, growth was greatest in independent stores and department stores respectively. Variations in growth-rate were more noticeable in some provinces than in others. In Newfoundland, chain store sales increased by 88.9 per cent, independent stores by 34.8 per cent. In Quebec, on the other hand, the chains rose by 45.4 per cent — only slightly more than the 41.8 per cent registered by independent retailers.

---

[4] All data, other than those relating to retail and service trades, were derived from "National Accounts, Income and Expenditure, 1968," Catalogue No. 13-201, Dominion Bureau of Statistics.

Although British Columbia experienced the greatest increase in **total** sales, the Pacific province was exceeded in chain store growth by Newfoundland and in department store growth by Quebec. Chain store sales developed slowest in Prince Edward Island, while independent stores experienced lower than average growth rates in Nova Scotia, Manitoba, New Brunswick, Alberta and Newfoundland.

Department store growth between 1961 and 1966 was irregular. In some provinces (i.e. Newfoundland, Quebec, Manitoba and Alberta), their sales increased at a faster rate than those of independent stores. Elsewhere, department store sales lagged behind the numerically-larger body of independent stores. Department store development was particularly slow in Nova Scotia, Prince Edward Island, Saskatchewan and New Brunswick.

As indicated in Table 5, independents remained by far the most dominant force in retailing. Although chains increased their share of the market from 21.7 per cent to 23.6 per cent, independent stores continued to account for approximately **two thirds** of total retail trade in Canada.

Chain store retailers took a higher share of the business (than in 1961) in nine of the ten provinces, with the greatest increase: (28.5 per cent) in Ontario. In Prince Edward Island, the chains' share of the business **fell** to 10.9 per cent. As noted above, department stores lost ground almost everywhere; only in Quebec and Manitoba was the downward drift reversed.

Table 6 throws some light on these trends by comparing the chain and independent share of the market by kind of business. In almost every case, chains took a greater share of the business in 1966 than in 1961 — even in some kinds of business where chains had previously been unable to get a foothold. Perhaps the most significant exception was in the grocery and combination store field, where independent stores (aided, no doubt, by their participation in the expanding voluntary group store operations) successfully maintained their market share in the face of strong competitive pressures.

Seasonal Trends

Table 7 indicates the changes which have taken place during the intercensal period in the percentage distribution of annual total retail sales by months. The importance of summer month business declined markedly; from May through to August, sales in 1966 were lower than in the comparable months of 1961. On the other hand retail sales in the months of March, October and December constituted a higher proportion of annual sales in 1966 than in 1961.

Changes in the weight of December sales are shown in more detail in Table 8. Year-end business became more meaningful for a wide range of retailers from shoe stores, hardware stores and jewellery stores, to furniture, television and appliance dealers. Only all other food stores and men's clothing stores showed lower percentages in their December business between 1961 and 1966. Women's clothing stores and fuel dealers remained static.

Definitions of terms used in this article are as follows:

Retail trade — the aggregate sales of business locations (retail outlets) in which the principal activity is the sale of merchandise for household or personal consumption. However, sales to consumers which bypass the retail outlet are not included.

Chain store — a business location operated by any organization of four or more retail outlets in the same kind of business, under the same legal ownership.

Department store — a retail outlet selling the following general lines of merchandise: family clothing and apparel; furniture, appliances and home furnishings; and a wide assortment of other commodities. These lines are arranged in separate sections or departments with the accounting on a departmentalized basis. The departments and functions are integrated under a single management. (1961 definition)

Independent store — any retail outlet not classified as either a chain or department store. (Note: for convenience in publishing retail trade data, department stores are usually included in the chain store universe.)

(Continued on page 105)

CANSIM

(Canadian Socio-economic Information Management System)

CANSIM is a fully computerized time series data bank developed in the DBS. All or any part of the data bank contents (currently some 8000 time series) may be purchased either in machine readable form (magnetic tape, cards) or as a computer print-out. Details of this service are contained in the various CANSIM documents listed on the inside back cover and in the CANSIM note on page iv of the August 1969 issue.

TECHNICAL NOTES

Presented below is a list of technical notes published in the previous issues of this Review.

1. Index of Real Domestic Product (Including the Index of Industrial Production).
2. Consumer Price Index.
3. Consumer Price Indexes for Regional Cities.
4. Manufacturing Inventories, Orders and Shipments, Historical Data.
5. Wholesale Trade.
6. Canadian Inter-city Retail Price Differentials.

SEASONAL ADJUSTMENT

A number of important economic time series are presented in unadjusted and seasonally adjusted form in the Canadian Statistical Review. Seasonally adjusted data are most useful for analysis and forecasting as they bring out the underlying trends of economic time series. Seasonal adjustments remove the effect of repetitive intra-year variations resulting from normal differences in weather, holidays with invariable dates, or other events which repeat with the same timing. Additional adjustments may be necessary for series which contain variation due to the difference in working or trading-days in each month or for holidays or other events with variable dates. Such adjustments are made prior to the seasonal adjustment but are treated as part of the seasonal adjustment.

The seasonal adjustment method applied to economic time series at the Dominion Bureau of Statistics is a computerized ratio-to-moving average method. The standard computer program used in the Bureau is the US Bureau of the Census Method II. The X-9 version is used for Labour Force data; for other data adjusted by computer the X-11 version is used.

MCD — MONTHS FOR CYCLICAL DOMINANCE

In seasonally adjusted series, month-to-month changes are often dominated by irregular movements, which may obscure the underlying trend-cycle. The MCD (months for cyclical dominance) in a table containing seasonally adjusted series indicates the smallest span of months for which the average change in the cyclical factor is greater than that in the irregular factor. For the smoothest series the MCD is 1, for the most erratic series it is 6. Applying moving average of the period equal to the MCD tends to smooth the series. The smoothed series will show the cyclical movements as clearly as series with an MCD of 1.

SMOOTHING OF SEASONALLY ADJUSTED SERIES

Series with an MCD of 4, 5 or 6 have been arbitrarily smoothed by a 5-term moving average. The 4 and 6 term averages are not employed because they present problems of centering the smoothed values.

LABOUR FORCE (More detail in Table 19)

TOTAL LABOUR FORCE, EMPLOYMENT, AND UNEMPLOYMENT DECLINED IN JULY. UNEMPLOYMENT WAS 4.7 PER CENT OF THE LABOUR FORCE.

		total labour force	total employed	employed non-agriculture	unemployed	unemployment rate	not in the labour force

---

[1] The occupational status of the majority of the persons destined to the labour force is determined by immigration officials by an examination of documentary evidence provided by the immigrants. The classification of occupations is similar to that used in the 1961 Census; see Occupational Classification Manual, Census of Canada, 1961, Catalogue Number 12-506.

[2] Includes logging, fishing, trapping and hunting.

[3] Includes mechanical and construction.

[4] Includes a small number in non-specified occupations.

[5] Does not include students entering Canada on students' visas.

[6] Includes also retired persons, elderly dependents, fiancés or fiancées and other unspecified persons not intending to enter the labour force.

---

[1] Includes change in farm inventories. The seasonally adjusted data include an arbitrary smoothing of crop production, standard seasonal adjustments for withdrawals of grain from farm stocks and the change in livestock items. Because of arbitrary elements, too precise an interpretation should not be given to the series. [2] Includes residual error of estimate. **Source: at bottom of Table 14.**

---

[1] Excludes inmates of institutions, members of the armed services, Indians living on reserves and residents of the Yukon and Northwest Territories. The estimates are derived from a sample survey and are subject to sampling error. In general, the smaller the estimate, the larger is the relative sampling error. [2] The labour force as a percentage of the population 14 years of age and over. [3] The unemployed as a percentage of the labour force. **Source: Labour Force Bulletin, (71-001), D.B.S.**

---

[1] See footnote 1, table 19. Labour force obtained as the sum of employed and unemployed from tables 21 and 23. [2] Canada totals, obtained by summing the seasonally adjusted data for the five regions, are usually different from the totals given on page S-1. The small differences result from the seasonal adjustment of the Canada and regional data having been carried out independently of each other. **Source: The Labour Force, (71-001) D. B. S.**

---

[1] In calculating time loss, only the workers directly affected by the strike or lockout are taken into account; time lost by workers indirectly affected, such as those laid off as a result of a work stoppage is not included. [2] The statistics for individual industries exclude strikes and lockouts involving fewer than 100 workers; the total, however, includes all work stoppages. The agricultural, finance, insurance and real estate and public administration and defence industries are not shown separately; should strikes occur in these industries, they also will be shown in the total. [3] Includes miscellaneous manufacturing industries. [4] Includes also publishing and allied industries. [5] Includes also the storage and communication industries. **Source: Labour Gazette, Department of Labour.**

*Revised monthly data will be available later.

[1] The data in Tables 28 to 35 are based on reports from firms employing 20 persons or more in any month of the year and relate to the last pay periods in the month. Greater industrial and area detail and more explanatory notes are given in the source publication named below. [2] Excludes agriculture, fishing, trapping and public administration and defence. [3] Includes storage, electric power, gas and water utilities. [4] Excludes domestic service. **Source: Employment and Average Weekly Wages and Salaries, (72-002), D.B.S.**

[1] See footnote 1 and source in Table 28. [2] Employment indexes in total manufacturing and in its total durable and non-durable components are given in Table 28. [3] In addition to those listed, tobacco products; knitting mills; printing, publishing and allied; and miscellaneous manufacturing industries are included in non-durable manufacturing. [4] Except machinery and transportation equipment industries.

[1] The data for the current year are subject to revision. [2] Includes gold. [3] Consists of general wholesale index less animal products and vegetable products component groups. [4] Consists of iron products and non-ferrous metals products component groups less gold. [5] These two series comprise the general wholesale index. [6] Excludes gold. **Source: Prices and Price Indexes (62-002), D. B. S.**

---

[1] Monthly shipments represent an estimated projection of the latest available Census of Manufacturers values except for those industries whose long-term contracts result in large intermittent shipments; for these a monthly estimate of work put in place has been substituted. [2] Total manufacturing inventory owned by manufacturers including warehouse stocks. [3] Total new orders received during the period at estimated selling value, net of cancellations, regardless of whether the orders will be filled from stock or as a result of activity during the same month. [4] Annual figures for inventories and unfilled orders are end of December values.

Source: Inventories, Shipments and Orders in Manufacturing Industries (31-001), D.B.S.

---

[1] Monthly shipments represent an estimated projection of the latest available Census of Manufacturer's values except for those industries whose long term contracts result in large intermittent shipments; for these a monthly estimate of work put in place has been estimated. **Source: Inventories, Shipments and Orders in Manufacturing Industries (31-001), D.B.S.**

[1] Starting with January 1968, production is manufacturers' production; prior to that date production was indicated by the use of excise duty stamps. [2] Intended for cigarettes. [3] Includes sales to wholesalers or retailers. [4] Subject to Excise Tax. [5] Includes sales for ships' stores and for export. [6] End of period. [7] Includes smoking, chewing and twist. **Sources: Tobacco and Tobacco Products Statistics Quarterly (32-014), D. B. S.; and Department of National Revenue.**

---

[1] Prior to 1964 data are not entirely comparable since they are on a production basis. [2] Includes slims and stretch pants. [3] Made from woven fabrics: shorts. [4] Starting with first quarter of 1968, "women's and Misses' category" becomes "Women's, Misses' and Juniors'". Data are not changed. **Source: Garment Shipments (34-001), D. B. S.**

---

[1] Total pulp production covers "screenings" which are already included in exports. "Screenings" are excluded throughout from mechanical and chemical pulp. [2] 100 cu. ft. of solid wood; pulpwood produced for domestic use and excluding exports, but including receipts of purchased roundwood. [3] Customs exports. [4] Mill shipments destined for export. **Sources: Pulpwood and Wood Residue Statistics (25-001), Trade of Canada, Exports (65-004), D.B.S; Bulletins of Canadian Pulp and Paper Association and Newsprint Association of Canada.**

---

[1] Data compiled according to the Steel Distribution Index revised January, 1964. Figures on net shipments relate to rolled steels products only. Shipments to consuming industries of castings, forgings and steel pipe are not included. [2] Includes building contractors, public and utility construction, structural steel fabricators, national defence and public works and utilities. [3] Includes appliances and utensils. Note: Some groupings are not entirely comparable to year 1964 due to change in classifications but in general the differences are minimal. [4] Excluding shipments for re-processing at maker's own plant. **Source: Primary Iron and Steel (41-001), D. B. S.**

---

[1] Production plus imports less re-exports. [2] Commencing January 1967, the value of new motor vehicles sold in Canada (as reported by manufacturers and distributors) was based on "actual cost to purchaser" rather than the suggested list price as in the past. **Sources: Motor Vehicle Shipments (42-002), New Motor Vehicle Sales (63-007), Trade of Canada, Imports (65-007), Exports (65-004), and Credit Statistics (61-004) D.B.S.**

---

[1] Barrels of 35 Canadian gallons. [2] Includes domestic and imported crude oil, condensate and pentanes plus received by Canadian refineries. [3] Refinery production (from crude oil, condensate and pentanes plus, and commingled propane/butane mixes) plus other materials used. [4] Includes deliveries of butane commingled in the crude stream in Saskatchewan and Alberto. [5] Includes inventories at end of period being held at gas plants and in storage caverns. [6] Includes stove oil, kerosene and tractor fuel. [7] Includes aviation gasoline and aviation turbo fuel. [8] Due to conceptual changes, the stock and sales series are not available on a comparable basis prior to June 1965. Includes propane and propane mixes and butane and butane mixes. [9] Includes petro-chemical feed stocks, naphtha specialties, coke, lubricating oil and grease, still gas and other products. **Source: Refined Petroleum Products (45-004), D. B. S.**

---

[1] The coverage was extended to 507 municipalities in 1948, and as of 1965, stands at more than 1,400; minor revisions are still being required in the table, due to the non-receipt of returns from a few small places. No account is taken of the building activity outside of registration areas. Actual operations normally follow the granting of permits but a number of projects are not undertaken or abandoned. The amount depends upon the statement of the applicant and considerable change may develop before the completion of the operation. **Source: Building Permits (64-001 , D.B.S.**

---

[1] A dwelling unit is defined as a structurally separate set of living quarters having its own entrance from outside of the building, or from a common passage inside. These data are the result of a nation-wide survey, for which the field work is carried out by the Central Mortgage and Housing Corporation. All metropolitan areas and urban centres with a population of 10,000 or more, along with certain other areas of high building activity, are enumerated completely each month. The remainder of the country is covered on a sample basis quarterly. [2] End of period. **Source: New Residential Construction (64-002), D. B. S.**

[1] Monthly totals are not equivalent to annual data which include Newfoundland and Yukon and Northwest Territories for which only annual statistics are collected. [2] Planks and boards, flooring and square timber. [3] Hollow blocks including fireproofing and load-bearing tile. [4] For building insulation only. [5] Figures cover the production of firms which normally account for 90 per cent of the total for Canada. [6] Factory sales of firms which normally account for 96% of total Canadian production. **Source: Concrete Products (44-002), Products made from Canadian Clays (44-005), Asphalt Roofing (45-001), Rigid Insulating Board (36-002), Iron Castings and Cast Iron Pipes and Fittings (41-004), Steel Wire and Specified Wire Products (41-006), Gypsum Products (44-003), Mineral Wool (44-004), Sales of Paints, Varnishes and Lacquers (46-001), Production, Shipments and Stocks on Hand of Sawmills (35-002), (35-003) monthly, (35-204) annual and Trade of Canada, Imports (65-007), Exports (65-004), D. [1] Cash receipts from farming operations excluding supplementary payments. Excludes Newfoundland. [2] Represents participation payments made by the Canadian Wheat Board direct to producers on crops delivered in previous years. [3] Includes rye, flaxseed, rapeseed, soybeans and corn. [4] Includes clover and grass seed, hay, clover, greenhouse products, mustard seed, sunflower seed, hops, dry beans and dry peas and miscellaneous products. [5] Made under the authority of the Agricultural Stabilization Act. **Source: Farm Cash Receipts (21-001), D. B. S.**

Note: Components may not add to totals due to rounding. [1] The estimates for the current year are subject to revision since the factors used in the blow-up are based on the previous years' operations and may change when the current annual totals for all firms are known the following year. [2] Excluding trucks. [3] The total value of all machines shown in this table is greater than the value shown for farm machinery in Table 87 which covers wholesalers proper only. The above table covers all sales to users and includes sales by manufacturers through their agents as well as the sales of importers and other dealers made directly to users. Even though sales are to users, i.e. farmers, values are stated at wholesale prices, i.e. cost to dealers. **Source: Farm Implement and Equipment Sales (63-009), D.B.S.**

[1] These indexes are available for January, April and August only. [2] Average rates of cash wages paid per month to male hired help on farms. They reflect the average of the wages paid to all male farm help regardless of age and skill. Data are available for January, May and August only. [3] Exclusive of Newfoundland. Western grain prices used in the construction of the Index prior to August 1, 1967 are final prices. From August 1, 1967 to date, the western grain prices used in the Index are initial prices only for wheat, oats and barley. [4] Barley No. 1 feed; hogs grade "B" alive. [5] Price of 100 lbs. good steer as a percentage of the price of 100 lbs. live hog, grade B. Effective January 1969 as a percentage of the price of 110 lbs. live hog. [6] Price of 100 lbs. good steer as a percentage of the price of 100 lbs. good lamb. [7] Quotations refer to steers of all weights. [8] Grade "B" hogs. Effective January 1969 prices based on index 100, hogs. **Sources: Price Index Numbers of Commodities and Services Used by Farmers (62-004); Farm Wages in Canada (21-002) Occasional; Coarse Grains Quarterly (22-001); Index Numbers of Farm Prices of Agricultural Products (62-003), D. B. S. and Livestock and Meat Trade Report, Dept. of Agriculture.**

---

[1] Total value of retail trade seasonally adjusted includes sales of department stores, general merchandise stores, variety stores and all other stores. Due to changes in definition of department stores, the re-classification of some variety store firms and the introduction of general merchandise stores, formerly in all other stores, the unadjusted and seasonally adjusted department store data for 1968 and subsequent years are not comparable with the data of previous years. Source: Retail Trade (63-005), D.B.S.

Table 85: value of retail trade by type of business and province, based on the 1960 standard industrial classification – concluded

[1] Department store stocks at end of period at selling value. The sales and stocks data are revised series based on the results of the 1961 Census of Merchandising and Service Establishments. [2] Due to changes in definition of department stores and the introduction of general merchandise stores, formerly included in all other stores, the 1968 and 1969 figures are not comparable with the data of previous years. **Source: Department Store Sales and Stocks (63-002), D. B. S.**

*Credit extended mainly to individuals; includes unidentifiable amounts of credit extended for non-consumer purposes; excludes certain forms, mainly service credit extended by doctors, dentists, lawyers, pawnbrokers, travel companies, restaurants and personal credit for which no statistics are available. [1]Conditional sales agreements held in connection with the financing of retail purchases of consumers' goods and repaid in instalments. [2]Companies licensed under the Small Loans Act and affiliated campagnies engaged in making personal loans. [3]Cash loans with no conditional sales contract but usually repaid in instalments. [4]Personal loans other than those fully secured by marketable bonds and stocks and other than home improvement loans. [5]Loans other than secured loans and mortgage loans. [6]Figures for dates other than year-end are estimated on the basis of loans made by sixteen companies. [7]Sum of instalment credit of clothing, hardware and jewellery stores, fuel dealers and "all other trades" in Table 89. [8]Sum of charge accounts of clothing, hardware, independent grocery and combination stores, jewellery and general stores, fuel dealers, garages and filling stations and "all other trades" in Table 89. [9]Amount owing to oil companies ex commercial accounts. [10]Personal loans only. [11]The data for Quebec savings banks loans and motor vehicle dealers are not seasonally adjusted as no seasonality is present; these series are repeated in the unadjusted form. **Sources: Credit Statistics (61-004), D. B. S.; Bank of Canada, Dept. of Insurance, Dept. of Finance and Dept. of Agriculture.**

[1] Monthly averages for 1966 and 1967 may differ from the averages of the monthly data due to revisions which cannot be allocated by months. [2] Data in thi table refer to class 1 and class 2 carriers which are railways with gross annual operating revenues of $500,000 or over. Includes operations of United State railways operating in Canada but excludes operations of Canadian railways in the United States. [3] Includes traffic interchanged between Canadian railways. **Sources Railway Operating Statistics** (52-003) monthly, and (52-206) annual, D.B.S.

[1] Includes Class I and Class II carriers only. These are trucking firms having $100,000 or more gross annual operating revenues. [2] Includes Class I carriers only. These are carriers having $100,000 or more gross annual revenues primarily from inter-city and rural bus operations. Regular and chartered services are included. [3] Includes Class I carriers only. These are carriers having $100,000 or more gross annual revenues primarily from urban transit operations. Data are total for motor bus, trolley coach, street car, subway and chartered services. **Sources: Motor Carriers-Freight, Quarterly** (53-005), **Passenger Bus Statistics** (53-002) monthly, and **Urban Transit** (53-003) monthly, D.B.S.

Voyageurs (53-002) mensuel, et **Transports Urbains** (53-003), mensuel, B.F.S.

[1] Monthly averages for years 1965 and 1966 differ from the averages of the monthly data due to revisions which cannot be allocated by months. [2] Includes scheduled and non-scheduled carriers, groups I to IV. These groups cover all air carriers with gross operating revenues of over $60,000 annually prior to January, 1964 and over $100,000 annually since. [3] United States and other foreign carriers having scheduled services into and out of Canada. Excludes passengers in transit through Canada. [4] Cargo includes air freight and express but excludes mail and excess baggage. [5] Data prior to 1964 do not include bulk transportation. Because of survey limitations, data on bulk transportation after January 1, 1964 refer only to aircraft having a minimum authorized take-off weight on wheels in excess of 18,000 lbs. **Source: Civil Aviation (51-001), D. B. S.**

[1] Data from February 1967 onwards for net receipts include gathering and trunk lines. Prior to that date they include trunk lines only. [2] Excludes distribution systems. [3] Received from field and processing plants by transport systems. [4] Starting with 1967, operating revenues of crude oil products are no longer available separately; they are included with the crude oil operating revenues. **Sources: Oil Pipeline Transport (55-001) and Gas Utilities (55-002), D.B.S.**

---

[1] The statistics of failures in this table are limited to those bankruptcies filed under Federal legislation (the Bankruptcy and Winding-Up Acts) and does not include failures, sales or seizures carried out under other legislation.The figures for Atlantic provinces may be obtained by subtracting the sum of Quebec, Ontario, Prairie provinces and British Columbia from the total. [2] In the Bankruptcy Act of 1949, provision is made for proposals from insolvent persons. Agreements made under this method are not included with the statistics of bankruptcies. Liabilities of insolvent persons making proposals are not available. **Source: Commercial Failures (61-002) Quarterly, D. B. S.**

---

[1] Bank of Canada deposits are averages of the juridical days in the month shown while Bank of Canada notes and Canadian dollar deposit liabilities are averages of the 4 consecutive Wednesdays ending with the second last Wednesday in the previous month. [2] Mainly deposits of foreign banks. [3] Capital, rest fund and undivided profits as at the latest fiscal year-end. [4] Including issues payable in foreign currency. [5] Securities purchased direct from issuer with a term of less than one year at time of issue are classified as loans. [6] Excluding Canadian day-to-day loans. [7] Loans to grain dealers and exporters. [8] Loans to finance purchase of Canada Savings Bonds at time of issue. [9] Total of foreign funds, short term foreign investments and other foreign currency assets less foreign currency liabilities. [10] Including loans to instalment finance companies. **Source: Statistical Summary of Bank of Canada.**

---

[1] The definition of profits before taxes is based mainly on the accounting definition used by corporations. However, depletion charges are added back to net profits while Canadian dividends received are excluded from profits in order to avoid duplication. The term "profits" as used here means the total profits of all companies earning profits less the losses of all companies incurring losses. Estimates are based on profits as reported by sample of all companies incorporated in Canada (excluding government-owned companies). [2] As is evident from the above footnote, the data reporting unit is the company; the data are therefore not entirely comparable with data where the establishment is the reporting unit. [3] Includes also the furniture and furnishings industry. [4] Includes the primary metal, the metal fabricating, the machinery and the transportation equipment industries. [5] Includes tobacco products, leather and miscellaneous manufacturing industries. [6] Includes also storage and communication industries. [7] Includes agriculture, forestry, fishing and construction. **Source: Corporation Profits (61-003), D.B.S.**

[1] The number of stocks included has varied over the period; the totals shown in the column headings represent the current coverage. [2] The headings for "base metals" and "industrial mines" are not found in the Standard Industrial Classification. [3] Combines the industrials, utilities and finance common stocks. [4] Stocks included in industrial mines are listed on the exchanges as industrials. Their operations include smelting and refining. [5] Includes also the machinery industries (except electrical machinery) and the transportation equipment industries. [6] Stocks included in the mining index are for producing mines. **Sources: Price Movements (62-001), and Prices and Price Indexes (62-002), D.B.S.**

Canadian Statistical Review Supplements

4 *Weekly Supplement to the Canadian Statistical Review*—Free to *Canadian Statistical Review* subscribers.

Contains figures produced by the DBS and other agencies which are released during the week of issue. The data will, of course, appear in the following issue of the *Canadian Statistical Review*. Designed to keep users of the *Review* closely informed of the most recent changes in the major statistical series.

6 *Annual Supplement to the Canadian Statistical Review*—Price $1. (Free to *Canadian Statistical Review* subscribers).

Contains monthly and quarterly historical records, adjusted and not adjusted for seasonality, of all the series in the "S" section of the *Canadian Statistical Review*. The series extend back to 1946 or as far back as the data are available.

Other Statistical Publications

03 *Historical Monthly Statistics* (Occasional)—Price $1.50 (Released August 1963).

Contains monthly statistics extending into the inter-war period or longer for 33 selected series in the fields of prices, industrial production, industrial employment, external trade, retail trade, railway transportation, finance, and commercial failures. For all fields except prices the data include original unadjusted series and their corresponding seasonally adjusted series and seasonal indexes.

CANSIM Manuals and other Publications

CANSIM: An Introduction to the Canadian Socio-economic Information Management System—Free.

30 *CANSIM: Operational Manual for Data Entry* (Occasional)—Price $1.

This manual will be of practical interest only to federal government agencies which store and maintain time series in the CANSIM data base. Users desiring a fuller knowledge of the codes used and the storage methodology will find this volume a useful companion to the "Retrieval Manual".

Catalogue
number — Title and Description

CANSIM Manuals and other Publications (Cont'd)

12–531 *CANSIM: Users' Manual for Data Retrieval and Manipulation* (Occasional)—Price $1.

Gives detailed instructions on procedures for obtaining data on magnetic tape from the CANSIM data base. The initial very rudimentary retrieval package described will be enlarged and improved; the manual will be expanded and modified accordingly. Existing "commands" will, however, continue to be supported.

— *CANSIM: Summary Reference Index*—Free on request.

This index represents a key to the contents of CANSIM, the CANSIM Socio-economic Information Management System, and is the first step in location and ordering time series from the system.

— *CANSIM Matrix Directory*—Free on request.

This directory lists in numerical order all matrices (roughly equivalent to a table) stored in CANSIM. Here the user finds for each matrix a title which gives a general description of the series included, the data source and, in some cases, a matrix note providing additional information of importance.

— *CANSIM Series Directory*—(Order by matrix number. Purchaser pays nominal charge to cover the cost of reproduction).

This directory contains titles and other descriptive detail for all series in the matrix. It is used in conjunction with the *CANSIM Manual for Data Retrieval and Manipulation* (12–531) to order series from DBS. May be ordered for specified matrix numbers.

This Review, the above and other publications of the Dominion Bureau of Statistics, including a free annotated catalogue of current publications, may be ordered from Publications Distribution, Dominion Bureau of Statistics, Ottawa, Ont., or from the Queen's Printer, Ottawa, Canada, and remittances made payable to the Receiver General of Canada. For further information direct inquiries to:

General Time Series Staff,
DBS, Ottawa.

NOTE TO USERS

Reprints and Publications

Reprints of articles and technical notes are available free on request to the General Time Series Staff, DBS.

A list of other publications available appears on the inside back cover.

About the Tables

Changes occur from time to time which affect time series published in this Review. For all series included, historical data are included in CANSIM (Canadian Socio-economic Information Management System), which is the DBS computerized time series data bank, and are revised and updated immediately information becomes available. In instances where the continuity of a series is seriously affected by changes such as in the Standard Industrial Classification, CANSIM contains both the unrevised historical data (as a closed file), and the new revised series with its shorter history.

The MCD — Months for Cyclical Dominance, shown for seasonally adjusted series, is explained on page 8.

Changes in this Issue

Revised data arising from the historical revision of the National Income and Expenditure Accounts are presented in the feature article of this issue. Data consistent with previously published series are available on request from the National Income and Expenditure Division, DBS.

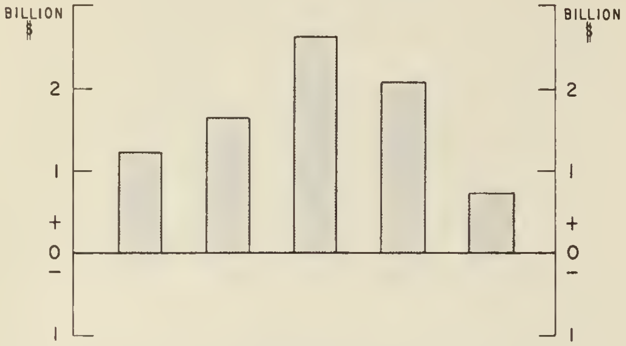
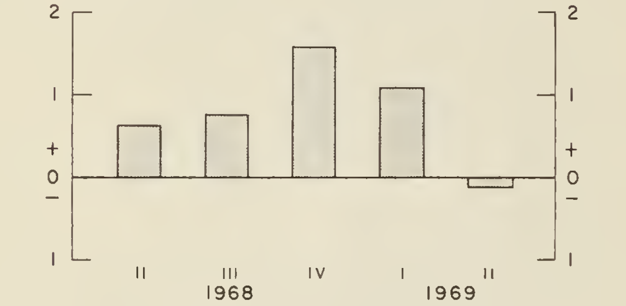
These tables include both original and seasonally adjusted data.

G.N.P. in current prices rose $0.7 billion in the second quarter but

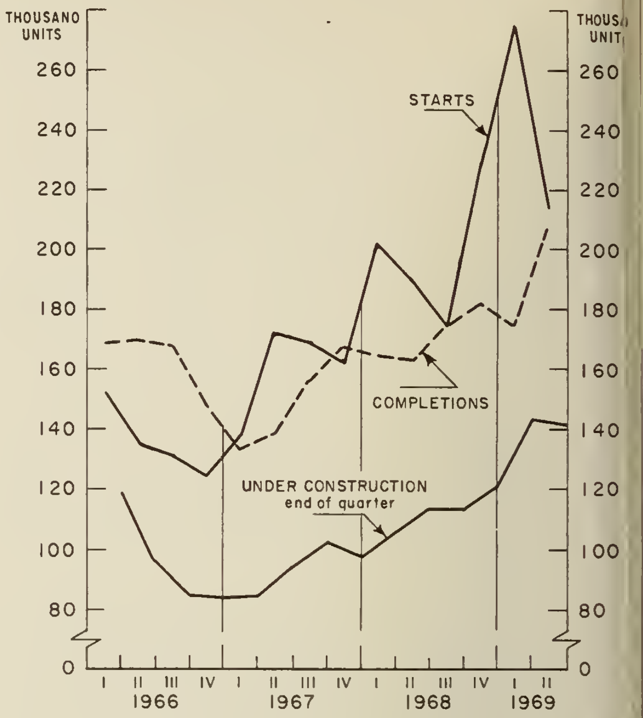
(Quarter-to-quarter change)



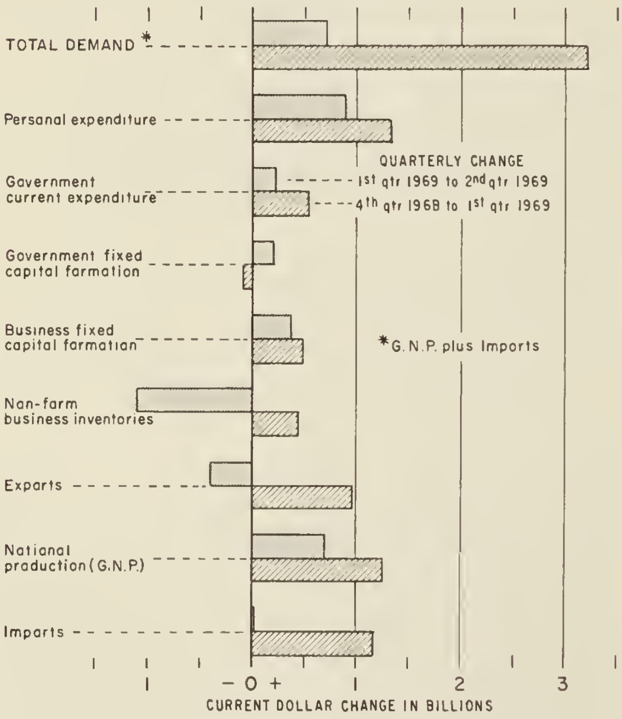
fell $0.1 billion in real terms (1961=100).



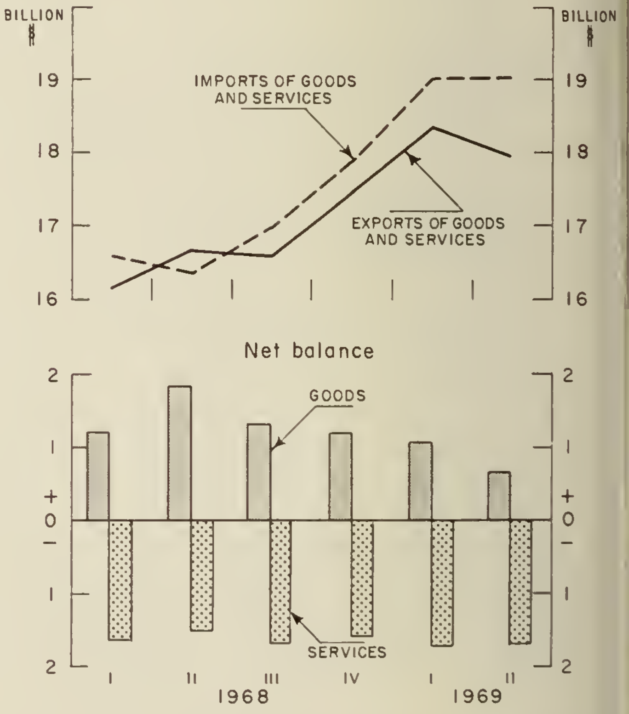
Investment in new housing rose 7.9 per cent in the second quarter reflecting higher starts in the previous two quarters. Completions and average units under construction were up in the second quarter.



While government fixed capital formation rose after falling in the first quarter, inventories and exports declined and other categories of demand increased at a slower rate.



A smaller surplus in the merchandise account than in recent quarters widened the deficit in goods and services transactions with non-residents.



ALL DATA SEASONALLY ADJUSTED, AT ANNUAL RATES.

NATIONAL INCOME AND EXPENDITURE ACCOUNTS, SECOND QUARTER 1969[1]

Introductory Review

After five quarters of rapid growth, the pace of economic activity levelled off in the strike affected second quarter of 1969. Gross National Product at market prices rose by 0.9 per cent to reach a level of $77.3 billion, seasonally adjusted at annual rates. With price increases of 1.1 per cent absorbing all of this gain, the volume of physical production remained virtually level with a decline of 0.2 per cent.

A lessening in demand pressure was evident in all major components except government capital expenditure, which rose by 6.5 per cent. The percentage gains shown by personal expenditure, 2 per cent, and by government current expenditure on goods and services, 1.5 per cent, were markedly lower than the corresponding increases of 3 and 4.5 per cent in the first quarter. The rise in the value of business gross fixed capital formation was mostly due to higher prices; in real terms, it rose by one half of 1 per cent versus 2 per cent in the first quarter. Decline occurred in exports of goods and services and in business non-farm inventory investment; the former declined by 2 per cent while the latter showed a small liquidation compared with substantial accumulation in the three previous quarters.

Within personal expenditure, services continued to increase at about the same rate as in previous quarters, but there was a sharp slowdown in purchase of goods. Durable goods showed a decline, mainly the result of sharply curtailed consumer expenditure on new cars of North American manufacture, while non-durable goods eased markedly. Large price increases accounted for two thirds of the increased expenditures.

A 6 per cent increase in housing construction accounted for most of the addition to business capital formation. Spending on plant and equipment rose by 1.5 per cent and was centered in machinery and equipment. Industrial disputes contributed to a slowdown in non-residential construction. The 1 per cent increase in outlays was entirely due to sharply rising material prices and wage rates; in constant dollars, non-residential construction showed a 2 per cent decline.

All of the inventory build-up in the second quarter took place in the farm sector and reflected accumulation in farm-held grain stocks associated with the slowdown in grain sales and in higher valued livestock inventories. Non-farm business inventories showed a small depletion after a billion dollar accumulation in the first quarter. The decline in business investment in non-farm inventories was widespread.

In the external sector, the net effect of a decline in exports and an unchanged level of imports was a widening in the deficit on current account (on a national accounts basis) from an annual rate of $676 million in the previous quarter to $1,080 million. The merchandise surplus dropped from $1,056 to $624 million, while the non-merchandise deficit narrowed slightly. Wheat and iron ore led the decline in merchandise exports.

On the income side, for the second consecutive quarter there was practically no change in corporation profits. Wages and salaries continued to advance rapidly, by about 3 per cent, with higher average weekly earnings accounting for most of the rise. Employment slowed down, largely the result of a number of strikes in the construction, mining and transportation industries. The unemployment rate, which had declined to 4.2 per cent in the first quarter from its high levels of around 5 per cent through the last three quarters of 1968, rose in the second quarter to 4.8 per cent.

Price Movements

The implicit price index of gross national expenditure advanced 1.1 per cent compared with an increase of 0.9 per cent in the first quarter. Higher rates of price increases occurred in all major components except exports which continued to show substantial increases.

Within personal expenditure, food prices advanced 1.9 per cent; a sharp increase of 11.2 per cent in the price of beef together with smaller increases in pork and other meats were slightly moderated by declines of 4.6 per cent in fresh fruits and 1.1 per cent in fresh vegetables. Alcoholic beverages and tobacco products rose 3.0 and 2.3 per cent respectively. Increases were also recorded in the price indexes of furniture, jewellery, household appliances, purchased transportation, medical care and rents; the price index of automobiles showed little change.

The price indexes of business residential and non-residential construction advanced markedlyly, by 2.2 and 3.0 per cent respectively. As in the last quarter, residential construction was particularly affected by sharp rises in the prices of lumber products. Both labour and materials components contributed to the acceleration in the price index of non-residential construction, but the most pronounced movement was shown by wage rates especially in engineering construction. Prices o machinery and equipment, which had remaine practically constant in the previous two quarters jumped by 1.7 per cent in the second quarter.

---

[1] This article is based on data arising from historical revision of the National Income and Expenditure Accounts. Data consistent with previously published series are available on request from the National Income and Expenditure Division, DBS.

Selected Implicit Price Indexes, — Seasonally Adjusted

Percentage change from the previous quarter

	1968			1969	
	II	III	IV	I	II
Personal expenditure on consumer goods and services	0.8	0.6	1.1	0.8	1.3
Business gross fixed capital formation	1.5	0.7	0.8	1.6	2.3
Residential construction	1.6	1.5	1.1	3.4	2.2
Non-residential construction	1.6	0.5	1.1	1.7	3.0
Machinery and equipment	0.4	0.8	- 0.1	—	1.7
Exports of goods and services	0.3	—	0.1	1.2	1.0
Gross National Expenditure	0.7	1.0	1.0	0.9	1.1

The Components of Demand

Personal Expenditure on Consumer Goods and Services

Personal expenditure recorded an increase of 2 per cent in the second quarter, the smallest advance in a year and considerably lower than the 3 per cent rise in the first quarter. With price increases accelerating, the gain in volume was slightly more than one half of 1 per cent. Both the slowdown in outlays and the acceleration in prices were centered in goods; expenditures and price increases for services rose at about the same rate as in recent quarters.

Within goods, purchases of new and used cars declined by 5.5 per cent after a 1.5 per cent drop in the first quarter. Outlays for new cars of North American manufacture recorded a second successive decline; purchases of used cars fell for the third consecutive quarter. Home furnishings, furniture and electrical appliances recorded increases of between 1 and 2 per cent, half as large as in the previous quarter. Food expenditures rose by 2 per cent, almost entirely the result of higher prices, while both tobacco and alcoholic beverages registered declines. Clothing outlays rose by 3 per cent, compared with 5 per cent in the first quarter, with the slowdown occurring in the women's and children's component.

Among components of services, increases of between 2.5 and 3.5 per cent were recorded in shelter, medical care, household operations and user-operated transportation, while personal care and recreation each rose by 1 per cent. The purchased transportation component declines 9.5 per cent, largely reflecting the Air Canada strike in April and May.

Gross Fixed Capital Formation

Spending on gross fixed capital formation increased by 3.5 per cent in the second quarter, reaching an annual rate of $17.4 billion. Government capital spending increased by 6.5 per cent to a level of $3.3 billion, business spending by 3 per cent to a level of $14.1 billion.

The strong increase in government capital expenditure, which occurred after declines in the three preceding quarters, was largely concentrated in municipal non-residential construction.

Among components of business capital spending, the rise in residential construction of over 6 per cent was the most pronounced. This rise reflected strong advances in housing starts in the previous two quarters. During the second quarter housing starts declined from an annual rate of 275,000 units to 213,600, while completions were up from 175,000 to 206,400 units. The average number of units under construction rose from 132,000 to 142,800.

Business non-residential construction, which was affected by a number of industrial disputes, continued at about the same rate as in the last two quarters. Business machinery and equipment rose by 2 per cent, all of which was due to non-farm capital goods, both imported and domestically produced.

CANSIM

(Canadian Socio-economic Information Management System)

CANSIM is a fully computerized time series data bank developed in the DBS. All or any part of the data bank contents (currently some 8000 time series) may be purchased either in machine readable form (magnetic tape, cards) or as a computer printout. Details of this service are contained in the various CANSIM documents listed on the inside back cover and in the CANSIM note on page iv of the August 1969 issue.

TECHNICAL NOTES

Presented below is a list of technical notes published in previous issues of the Review.

1. Index of Real Domestic Product (Including the Index of Industrial Production). (August 1968).
2. Consumer Price Index (September 1968).
3. Consumer Price Indexes for Regional Cities (November 1968).
4. Manufacturing Inventories, Orders and Shipments, Historical Data (January 1969).
5. Wholesale Trade (June 1969).
6. Canadian Inter-city Retail Price Differentials (June 1969).

SEASONAL ADJUSTMENT

A number of important economic time series are presented in unadjusted and seasonally adjusted form in the Canadian Statistical Review. Seasonally adjusted data are most useful for analysis and forecasting as they bring out the underlying trends of economic time series. Seasonal adjustments remove the effect of repetitive intra-year variations resulting from normal differences in weather, holidays with invariable dates, or other events which repeat with the same timing. Additional adjustments may be necessary for series which contain variation due to the difference in working or trading-days in each month or for holidays or other events with variable dates. Such adjustments are made prior to the seasonal adjustment but are treated as part of the seasonal adjustment.

The seasonal adjustment method applied to economic time series at the Dominion Bureau of Statistics is a computerized ratio-to-moving average method. The standard computer program used in the Bureau is the US Bureau of the Census Method II. The X-9 version is used for Labour Force data; for other data adjusted by computer the X-11 version is used.

MCD – MONTHS FOR CYCLICAL DOMINANCE

In seasonally adjusted series, month-to-month changes are often dominated by irregular movements, which may obscure the underlying trend-cycle. The MCD (months for cyclical dominance) in a table containing seasonally adjusted series indicates the smallest span of months for which the average change in the cyclical factor is greater than that in the irregular factor. For the smoothest series the MCD is 1, for the most erratic series it is 6. Applying moving average of the period equal to the MCD tends to smooth the series. The smoothed series will show the cyclical movements as clearly as series with an MCD of 1.

SMOOTHING OF SEASONALLY ADJUSTED SERIES

Smoothed data have been used for the graphs of some of the seasonally adjusted series with MCD of 4, 5 or 6. A 5-term moving average was applied for smoothing these series.

BOUR FORCE (More detail in Table 19)

TOTAL LABOUR FORCE AND EMPLOYMENT DECLINED SLIGHTLY IN AUGUST, WHILE UNEMPLOYMENT INCREASED. EMPLOYMENT WAS 4.9 PER CENT OF THE LABOUR FORCE.

	total labour force	total employed	employed non-agriculture	unemployed	unemployment rate	not in the labour force

[1] Gross National Product at market prices excluding accrued net income of farm operators from farm production. [2] Before dividends paid to non-residents; see also footnotes on Table 113. [3] Total of all monthly and quarterly series as in column 14, Table 90. [4] Revised data arising from the historical revision of the National Income and Expenditure Accounts are presented in the feature article of this issue.

PRICES (More detail in Tables 37, 38, 39, 93, 94 and 114)

THE GENERAL WHOLESALE INDEX DECLINED FOR THE SECOND CONSECUTIVE MONTH. THE THIRTY INDUSTRIAL MATERIALS INDEX REMAINED UNCHANGED.

THE INDUSTRIAL COMMON STOCKS INDEX DECLINED FRACTIONALLY IN AUGUST.

THE CONSUMER PRICE INDEX ROSE IN AUGUST. THE DECLINE IN THE DURABLES INDEX WAS OFFSET MAINLY BY THE INCREA IN THE FOOD COMPONENT.

---

[1] The occupational status of the majority of the persons destined to the labour force is determined by immigration officials by an examination of documentary evidence provided by the immigrants. The classification of occupations is similar to that used in the 1961 Census; see Occupational Classification Manual, Census of Canada, 1961, Catalogue Number 12-506. [2] Includes logging, fishing, trapping and hunting. [3] Includes mechanical and construction. [4] Includes a small number in non-specified occupations. [5] Does not include students entering Canada on students' visas. [6] Includes also retired persons, elderly dependents, fiancés or fiancées and other unspecified persons not intending to enter the labour force. **Source: Quarterly Bulletin, Department of Manpower and Immigration.**

---

[1] Includes change in farm inventories. The seasonally adjusted data include an arbitrary smoothing of crop production, standard seasonal adjustments for withdrawals of grain from farm stocks and the change in livestock items. Because of arbitrary elements, too precise an interpretation should not be given to the series. [2] Includes residual error of estimate. [3] **Revised data arising from the historical revision of the National Income and Expenditure Accounts are presented in the feature article of this issue.** **Source: at bottom of Table 14.**

---

[1] Excludes inmates of institutions, members of the armed services, Indians living on reserves and residents of the Yukon and Northwest Territories. The estimates are derived from a sample survey and are subject to sampling error. In general, the smaller the estimate, the larger is the relative sampling error. [2] The labour force as a percentage of the population 14 years of age and over. [3] The unemployed as a percentage of the labour force. **Source: Labour Force Bulletin, (71-001), D.B.S.**

[1] See footnote 1, table 19. Labour force obtained as the sum of employed and unemployed from tables 21 and 23. [2] Canada totals, obtained by summing the seasonally adjusted data for the five regions, are usually different from the totals given on page S-1. The small differences result from the seasonal adjustment of the Canada and regional data having been carried out independently of each other. **Source: The Labour Force, (71-001) D. B. S.**

---

[1] In calculating time loss, only the workers directly affected by the strike or lockout are taken into account; time lost by workers indirectly affected, such as those laid off as a result of a work stoppage is not included. [2] The statistics for individual industries exclude strikes and lockouts involving fewer than 100 workers; the total, however, includes all work stoppages. The agricultural, finance, insurance and real estate and public administration and defence industries are not shown separately; should strikes occur in these industries, they also will be shown in the total. [3] Includes miscellaneous manufacturing industries. [4] Includes also publishing and allied industries. [5] Includes also the storage and communication industries. **Source: Labour Gazette, Department of Labour.**

*Revised monthly data will be available later.

[1] The data in Tables 28 to 35 are based on reports from firms employing 20 persons or more in any month of the year and relate to the last pay periods in the month. Greater industrial and area detail and more explanatory notes are given in the source publication named below. [2] Excludes agriculture, fishing, trapping and public administration and defence. [3] Includes storage, electric power, gas and water utilities. [4] Excludes domestic service. **Source: Employment and Average Weekly Wages and Salaries, (72-002), D.B.S.**

[1] See footnote 1 and source in Table 28. [2] Employment indexes in total manufacturing and in its total durable and non-durable components are given in Table 28. [3] In addition to those listed, tobacco products; knitting mills; printing, publishing and allied; and miscellaneous manufacturing industries are included in non-durable manufacturing. [4] Except machinery and transportation equipment industries.

[1] The data for the current year are subject to revision. [2] Includes gold. [3] Consists of general wholesale index less animal products and vegetable products component groups. [4] Consists of iron products and non-ferrous metals products component groups less gold. [5] These two series comprise the general wholesale index. [6] Excludes gold. Source: Prices and Price Indexes (62-002), D. B. S.

---

[1] Monthly shipments represent an estimated projection of the latest available Census of Manufacturers values except for those industries whose long-term contracts result in large intermittent shipments; for these a monthly estimate of work put in place has been substituted. [2] Total manufacturing inventory owned by manufacturers including warehouse stocks. [3] Total new orders received during the period at estimated selling value, net of cancellations, regardless of whether the orders will be filled from stock or as a result of activity during the same month. [4] Annual figures for inventories and unfilled orders are end of December values.

Source: Inventories, Shipments and Orders in Manufacturing Industries (31-001), D.B.S.

---

[1] Monthly shipments represent an estimated projection of the latest available Census of Manufacturer's values except for those industries whose long term contracts resul. in large intermittent shipments; for these a monthly estimate of work put in place has been estimated. **Source: Inventories, Shipments and Orders in Manufacturing Industries (31-001), D.B.S.**

---

[1] Starting with January 1968, production is manufacturers' production; prior to that date production was indicated by the use of excise duty stamps. [2] Intended for cigarettes. [3] Includes sales to wholesalers or retailers. [4] Subject to Excise Tax. [5] Includes sales for ships' stores and for export. [6] End of period. [7] Includes smoking, chewing and twist. **Sources: Tobacco and Tobacco Products Statistics Quarterly (32-014), D. B. S.; and Department of National Revenue.**

---

[1] Prior to 1964 data are not entirely comparable since they are on a production basis. [2] Includes slims and stretch pants. [3] Made from woven fabrics: shorts. [4] Starting with first quarter of 1968, "women's and Misses' category" becomes "Women's, Misses' and Juniors'". Data are not changed. **Source: Garment Shipments (34-001), D. B. S.**

---

[1] Total pulp production covers "screenings" which are already included in exports. "Screenings" are excluded throughout from mechanical and chemical pulp. [2] 100 cu. ft. of solid wood; pulpwood produced for domestic use and excluding exports, but including receipts of purchased roundwood. [3] Customs exports. [4] Mill shipments destined for export. **Sources: Pulpwood and Wood Residue Statistics (25-001), Trade of Canada, Exports (65-004), D.B.S; Bulletins of Canadian Pulp and Paper Association and Newsprint Association of Canada.**

---

[1] Data compiled according to the Steel Distribution Index revised January, 1964. Figures on net shipments relate to rolled steels products only. Shipments to consuming industries of castings, forgings and steel pipe are not included. [2] Includes building contractors, public and utility construction, structural steel fabricators, national defence and public works and utilities. [3] Includes appliances and utensils. Note: Some groupings are not entirely comparable to year 1964 due to change in classifications but in general the differences are minimal. [4] Excluding shipments for re-processing at maker's own plant. **Source: Primary Iron and Steel (41-001), D. B. S.**

---

[1] Production plus imports less re-exports. [2] Commencing January 1967, the value of new motor vehicles sold in Canada (as reported by manufacturers and distributors) was based on "actual cost to purchaser" rather than the suggested list price as in the past. **Sources: Motor Vehicle Shipments (42-002), New Motor Vehicle Sales (63-007), Trade of Canada, Imports (65-007), Exports (65-004), and Credit Statistics (61-004) D.B.S.**

---

[1] Barrels of 35 Canadian gallons. [2] Includes domestic and imported crude oil, condensate and pentanes plus received by Canadian refineries. [3] Refinery production (from crude oil, condensate and pentanes plus, and commingled propane/butane mixes) plus other materials used. [4] Includes deliveries of butane commingled in the crude stream in Saskatchewan and Alberta. [5] Includes inventories at end of period being held at gas plants and in storage caverns. [6] Includes stove oil, kerosene and tractor fuel. [7] Includes aviation gasoline and aviation turbo fuel. [8] Due to conceptual changes, the stock and sales series are not available on a comparable basis prior to June 1965. Includes propane and propane mixes and butane and butane mixes. [9] Includes petro-chemical feed stocks, naphtha specialties, coke, lubricating oil and grease, still gas and other products. **Source: Refined Petroleum Products (45-004), D. B. S.**

[1] The coverage was extended to 507 municipalities in 1948, and as of 1965, stands at more than 1,400; minor revisions are still being required in the table, due to the non-receipt of returns from a few small places. No account is taken of the building activity outside of registration areas. Actual operations normally follow the granting of permits but a number of projects are not undertaken or abandoned. The amount depends upon the statement of the applicant and considerable change may develop before the completion of the operation. **Source: Building Permits (64-001), D.B.S.**

---

[1] A dwelling unit is defined as a structurally separate set of living quarters having its own entrance from outside of the building, or from a common passage inside. These data are the result of a nation-wide survey, for which the field work is carried out by the Central Mortgage and Housing Corporation. All metropolitan areas and urban centres with a population of 10,000 or more, along with certain other areas of high building activity, are enumerated completely each month. The remainder of the country is covered on a sample basis quarterly. [2] End of period. **Source: New Residential Construction (64-002), D. B. S.**

---

[1] Monthly totals are not equivalent to annual data which include Newfoundland and Yukon and Northwest Territories for which only annual statistics are collected. [2] Planks and boards, flooring and square timber. [3] Hollow blocks including fireproofing and load-bearing tile. [4] For building insulation only. [5] Figures cover the production of firms which normally account for 90 per cent of the total for Canada. [6] Factory sales of firms which normally account for 96% of total Canadian production. **Source: Concrete Products (44-002), Products made from Canadian Clays (44-005), Asphalt Roofing (45-001), Rigid Insulating Board (36-002), Iron Castings and Cast Iron Pipes and Fittings (41-004), Steel Wire and Specified Wire Products (41-006), Gypsum Products (44-003), Mineral Wool (44-004), Sales of Paints, Varnishes and Lacquers (46-001), Production, Shipments and Stocks on Hand of Sawmills (35-002), (35-003) monthly, (35-204) annual and Trade of Canada, Imports (65-007), Exports (65-004), D. [1] Cash receipts from farming operations excluding supplementary payments. Excludes Newfoundland. [2] Represents participation payments made by the Canadian Wheat Board direct to producers on crops delivered in previous years. [3] Includes rye, flaxseed, rapeseed, soybeans and corn. [4] Includes clover and grass seed, hay, clover, greenhouse products, mustard seed, sunflower seed, hops, dry beans and dry peas and miscellaneous products. [5] Made under the authority of the Agricultural Stabilization Act. **Source: Farm Cash Receipts (21-001), D. B. S.**

Note: Components may not add to totals due to rounding. [1] The estimates for the current year are subject to revision since the factors used in the blow-up are based on the previous years' operations and may change when the current annual totals for all firms are known the following year. [2] Excluding trucks. [3] The total value of all machines shown in this table is greater than the value shown for farm machinery in Table 87 which covers wholesalers proper only. The above table covers all sales to users and includes sales by manufacturers through their agents as well as the sales of importers and other dealers made directly to users. Even though sales are to users, i.e. farmers, values are stated at wholesale prices, i.e. cost to dealers. **Source: Farm Implement and Equipment Sales (63-009), D.B.S.**

[1] These indexes are available for January, April and August only. [2] Average rates of cash wages paid per month to male hired help on farms. They reflect the average of the wages paid to all male farm help regardless of age and skill. Data are available for January, May and August only. [3] Exclusive of Newfoundland. Western grain prices used in the construction of the Index prior to August 1, 1967 are final prices. From August 1, 1967 to date, the western grain prices used in the Index are initial prices only for wheat, oats and barley. [4] Barley No. 1 feed; hogs grade "B" alive. [5] Price of 100 lbs. good steer as a percentage of the price of 100 lbs. live hog, grade B. Effective January 1969 as a percentage of the price of 110 lbs. live hog. [6] Price of 100 lbs. good steer as a percentage of the price of 100 lbs. good lamb. [7] Quotations refer to steers of all weights. [8] Grade "B" hogs. Effective January 1969 prices based on index 100, hogs. **Sources: Price Index Numbers of Commodities and Services Used by Farmers (62-004); Form Wages in Canada (21-002) Occasional; Coarse Grains Quarterly (22-001); Index Numbers of Farm Prices of Agricultural Products (62-003), D. B. S. and Livestock and Meat Trade Report, Dept. of Agriculture.**

[1] Customs exports are adjusted to reflect actual physical movement of wheat flour from Canada. Data shown for the last current year are not so adjusted. [2] Production is calculated as the sum of the current manufacturers' shipments and the net change in manufacturers' inventories from the previous months. [3] Includes stocks held by manufacturers, wholesalers and other warehouses. [4] Includes baking and frying oils and fats. [5] Includes stocks held by manufacturers and other warehouses. [6] Includes beef stews and boiled dinners. [7] Includes fresh sausage, frankfurters, weiners and all other sausage. [8] Includes solid, coated, bulk, packages and novelties. [9] Includes tomato sauce, sauces for meat and fish and sauces, other. **Sources: Grain Milling Statistics (32-003), Oils and Fats (32-006),** Quarterly Reports, **Biscuits and Confectionery (32-016), Fruit and Vegetable Preparations (32-017) and Miscellaneous Food Preparations (32-018), Monthly Production of Soft Drinks (32-001),** Monthly Report, **Meat and Meat Preparations, D. ---

[1] Total value of retail trade seasonally adjusted includes sales of department stores, general merchandise stores, variety stores and all other stores. Due to changes in definition of department stores, the re-classification of some variety store firms and the introduction of general merchandise stores, formerly in all other stores, the unadjusted and seasonally adjusted department store data for 1968 and subsequent years are not comparable with the data of previous years. Source: Retail Trade (63-005), D.B.S.

Table 85: value of retail trade by type of business and province, based on the 1960 standard industrial classification – concluded

[1] Department store stocks at end of period at selling value. The sales and stocks data are revised series based on the results of the 1961 Census of Merchandising and Service Establishments. [2] Due to changes in definition of department stores and the introduction of general merchandise stores, formerly included in all other stores, the 1968 and 1969 figures are not comparable with the data of previous years. **Source: Department Store Sales and Stocks (63-002), D. B. S.**

Note: Components may not add to totals due to rounding and partial revisions. [1] Fully secured by marketable bonds and stocks. Excludes loans to finance the purchase of Canada Savings Bonds. [2] Includes loans on the security of household property. [3] Includes loans to finance companies which are affiliates of retail merchandisers. [4] Religious, educational, health and welfare institutions. [5] Not available on a monthly basis. [6] Differs from general loans in Table 106 by the exclusion of loans to instalment finance companies. **Sources: Statistical Summary of the Bank of Canada and Dept. of Finance.**

---

*Credit extended mainly to individuals; includes unidentifiable amounts of credit extended for non-consumer purposes; excludes certain forms, mainly service credit extended by doctors, dentists, lawyers, pawnbrokers, travel companies, restaurants and personal credit for which no statistics are available. [1] Conditional sales agreements held in connection with the financing of retail purchases of consumers' goods and repaid in instalments. [2] Companies licensed under the Small Loans Act and affiliated compagnies engaged in making personal loans. [3] Cash loans with no conditional sales contract but usually repaid in instalments. [4] Personal loans other than those fully secured by marketable bonds and stocks and other than home improvement loans. [5] Loans other than secured loans and mortgage loans. [6] Figures for dates other than year-end are estimated on the basis of loans made by sixteen companies. [7] Sum of instalment credit of clothing, hardware and jewellery stores, fuel dealers and "all other trades" in Table 89. [8] Sum of charge accounts of clothing, hardware, independent grocery and combination stores, jewellery and general stores, fuel dealers, garages and filling stations and "all other trades" in Table 89. [9] Amount owing to oil companies ex commercial accounts. [10] Personal loans only. [11] The data for Quebec savings banks loans and motor vehicle dealers are not seasonally adjusted as no seasonality is present; these series are repeated in the unadjusted form. **Sources: Credit Statistics (61-004), D. [1] Monthly averages for 1966 and 1967 may differ from the averages of the monthly data due to revisions which cannot be allocated by months. [2] Data in this table refer to class 1 and class 2 carriers which are railways with gross annual operating revenues of $500,000 or over. Includes operations of United States railways operating in Canada but excludes operations of Canadian railways in the United States. [3] Includes traffic interchanged between Canadian railways. **Sources: Railway Operating Statistics (52-003) monthly, and (52-206) annual, D.B.S.**

[1] Includes Class I and Class II carriers only. These are trucking firms having $100,000 or more gross annual operating revenues. [2] Includes Class I carriers only. These are carriers having $100,000 or more gross annual revenues primarily from inter-city and rural bus operations. Regular and chartered services are included. [3] Includes Class I carriers only. These are carriers having $100,000 or more gross annual revenues primarily from urban transit operations. Data are totals for motor bus, trolley coach, street car, subway and chartered services. **Sources: Motor Carriers-Freight, Quarterly (53-005), Passenger Bus Statistics (53-002) monthly, and Urban Transit (53-003) monthly, D.B.S.**

[1] Monthly averages for years 1965 and 1966 differ from the averages of the monthly data due to revisions which cannot be allocated by months. [2] Includes scheduled and non-scheduled carriers, groups I to IV. These groups cover all air carriers with gross operating revenues of over $60, 000 annually prior to January, 1964 and over $100, 000 annually since. [3] United States and other foreign carriers having scheduled services into and out of Canada. Excludes passengers in transit through Canada. [4] Cargo includes air freight and express but excludes mail and excess baggage. [5] Data prior to 1964 do not include bulk transportation. Because of survey limitations, data on bulk transportation after January 1, 1964 refer only to aircraft having a minimum authorized take-off weight on wheels in excess of 18, 000 lbs. **Source: Civil Aviation (51-001), D. B. S.**

---

[1]The statistics of failures in this table are limited to those bankruptcies filed under Federal legislation (the Bankruptcy and Winding-Up Acts) and does not include failures, sales or seizures carried out under other legislation.The figures for Atlantic provinces may be obtained by subtracting the sum of Quebec, Ontario, Prairie provinces and British Columbia from the total. [2]In the Bankruptcy Act of 1949, provision is made for proposals from insolvent persons. Agreements made under this method are not included with the statistics of bankruptcies. Liabilities of insolvent persons making proposals are not available. **Source: Commercial Failures (61-002) Quarterly, D. B. S.**

---

[1] Bank of Canada deposits are averages of the juridical days in the month shown while Bank of Canada notes and Canadian dollar deposit liabilities are averages of the 4 consecutive Wednesdays ending with the second last Wednesday in the previous month. [2] Mainly deposits of foreign banks. [3] Capital, rest fund and undivided profits as at the latest fiscal year-end. [4] Including issues payable in foreign currency. [5] Securities purchased direct from issuer with a term of less than one year at time of issue are classified as loans. [6] Excluding Canadian day-to-day loans. [7] Loans to grain dealers and exporters. [8] Loans to finance purchase of Canada Savings Bonds at time of issue. [9] Total of foreign funds, short term foreign investments and other foreign currency assets less foreign currency liabilities. [10] Including loans to instalment finance companies. **Source: Statistical Summary of Bank of Canada.**

---

[1] The definition of profits before taxes is based mainly on the accounting definition used by corporations. However, depletion charges are added back to net profits while Canadian dividends received are excluded from profits in order to avoid duplication. The term "profits" as used here means the total profits of all companies earning profits less the losses of all companies incurring losses. Estimates are based on profits as reported by sample of all companies incorporated in Canada (excluding government-owned companies). [2] As is evident from the above footnote, the data reporting unit is the company; the data are therefore not entirely comparable with data where the establishment is the reporting unit. [3] Includes also the furniture and furnishings industry. [4] Includes the primary metal, the metal fabricating, the machinery and the transportation equipment industries. [5] Includes tobacco products, leather and miscellaneous manufacturing industries. [6] Includes also storage and communication industries. [7] Includes agriculture, forestry, fishing and construction. **Source: Corporation Profits (61-003), D.B.S.**

[1] The number of stocks included has varied over the period; the totals shown in the column headings represent the current coverage. [2] The headings for "base metals" and "industrial mines" are not found in the Standard Industrial Classification. [3] Combines the industrials, utilities and finance common stocks. [4] Stocks included in industrial mines are listed on the exchanges as industrials. Their operations include smelting and refining. [5] Includes also the machinery industries (except electrical machinery) and the transportation equipment industries. [6] Stocks included in the mining index are for producing mines. Sources: Price Movements (62-001), and Prices and Price Indexes (62-002), D.B.S.

(Continued from page 6)

Non-farm Business Inventories

Stocks of non-farm business inventories in the second quarter of 1969 were liquidated by $92 million, seasonally adjusted at annual rates. This liquidation was in contrast with a substantial accumulation of $1 billion in the previous period. The decline in the current quarter was most notable in the stocks of non-durable goods producing industries.

In manufacturing, there were increases in the stocks of almost all the durable goods producing industries, though generally at a lower rate than in the previous quarter, but these were more than offset by a substantial liquidation in the stocks of the non-durable goods sector, especially in the food, paper and petroleum industries.

There were practically no net additions to inventories in wholesale trade, a general increase in the stocks of durable goods dealers being balanced by a liquidation in non-durable lines, mostly groceries and petroleum dealers. At the retail trade level, increases in stocks occurred in most lines of durable and non-durable goods, but the rate of accumulation was much smaller than in the previous quarter.

Exports and Imports of Goods and Services

The decline of merchandise exports, which fell by 3.5 per cent, was centered on wheat, iron ore, lumber, newsprint and primary iron and steel. Merchandise imports showed a smaller decrease, down 1 per cent.

Some differences exist between the movements of merchandise exports and imports shown by the Balance of Payments, and included in this report on a national accounts basis, and those recorded in "Trade of Canada" reports. In the second quarter a number of balance of payments adjustments were made to recorded merchandise trade to reflect the actual timing of wheat shipments and to take into account progress payments on aircraft for both exports and imports. In addition to these, adjustments were introduced this quarter to take account of differences in valuation concepts between the trade and balance of payments series relating to automotive products and an adjustment to eliminate from merchandise imports of automotive products certain charges which have been included in non-merchandise transactions.[2]

[1] Includes withholding tax.
[2] Excludes personal and institutional remittances, official contributions and pension payments.

The Components of Income

Labour Income

During the second quarter, labour income increased by almost 3 per cent, approximately the same as the gains recorded during the proceding two quarters. The goods-producing industries advanced by about 2 per cent and the service-producing industries by over 3 per cent.

In the goods-producing industries, manufacturing increased by over 2 per cent with relatively larger increases in average weekly earnings than in employment. Wages and salaries in construction, which was seriously affected by industrial disputes, remained about the same. Mining was also affected by industrial disputes and declined by about 2 per cent.

In the service-producing industries, utilities, and transportation, storage and communication recorded an increase of 1.5 per cent despite the Air Canada strike. Trade increased by over 2.5 per cent mainly because of higher average weekly earnings. Finance increased by 5 per cent, service by almost 4 per cent and government by about 3.5 per cent.

Corporation Profits

Corporation profits before taxes for the second quarter 1969 remained almost level with those of the two previous quarters. Sizeable advances occurred in the mining industry, 13 per cent, and in the finance and services industries, 7 per cent each. Lesser gains of 2 per cent occurred in manufacturing and in transportation, storage and communications. Increases were almost entirely offset by substantial declines of about 18 per cent in each of the retail and wholesale trade groups. Within manufacturing movements were mixed. Food and beverages, rubber, textiles, electrical products and chemicals all registered profit increases, while printing and publishing, metals, other manufacturing and non-metallic industries suffered declines.

Accrued Net Income of Farm Operators

Accrued net income of farm operators from farm production rose to a rate of $1,600 million, 3.5 per cent higher than in the first quarter. The value of livestock production rose sharply, due mainly to higher prices. Partially offsetting this increase were declines in the value of grain production, reflecting a lower rate of profits of the Canadian Wheat Board as both exports and prices fell, and in cash income from the sale of other farm products, notably in tobacco, dairy products and fruits.

Real Domestic Product[3]

Real Domestic Product dropped by 0.6 per cent in the second quarter, after large advances in the previous two quarters. This is the first decrease recorded in this index since the current economic upswing started in 1961. Major labour disturbances contributed to the setback in output of both goods and service-producing industries.

In goods, the decline originated mainly in the mining industries (down 7.5 per cent), where the production of iron ore was seriously affected by labour disputes. Output in agriculture and in construction was also down, whereas manufacturing recorded a small gain. Most of the drop in service-producing industries was attributable to transportation, which fell by 4.6 per cent—largely the result of major strikes directly or indirectly affecting air, railway and water transport.

Revised National Income and Expenditure Accounts, 1968 and 1969

DBS recently released the summary results of a complete and comprehensive revision of the National Income and Expenditure Accounts. This revision was carried out at the annual level only; a revision of quarterly estimates is now underway and will not be available for some time. During the interim period, 1968 quarterly data previously published have been restructured into the new framework of the accounts and then adjusted arithmetically to the new annual totals; these revised estimates have been linked forward for the first two quarters of 1969. Data are given for the income and expenditure tables only and for GNE in constant (1961) dollars; a full set of tables will be prepared at the time of the fourth quarter.

---

[1] Includes the withholding tax applicable to this item.

[2] Includes an arbitrary smoothing of crop production and standard seasonal adjustments for withdrawals of grain from farm stocks and the change in livestock items. Because of the arbitrary elements, too precise an interpretation should not be given the seasonally adjusted figures of accrued net income of farm operators.

[3] Includes net income of independent professional practitioners.

[4] See footnote 1, Table B.

---

[1] The book value of inventories is deflated to remove the effect of price changes and the derives "physical" change is then valued at average prices the current period to obtain the value of physical change. The difference between this value of physical change and the change in book value is called the i ventory valuation adjustment. (See line 8, Table A.)

[2] Revised figures not incorporated into the Accounts as shown in the "Quarterly Estimates of the Canadian Balance of Payments, Second Quarter, 1969" DBS Catalogue No. 67-001, are as follows:

Exports	3,586	4,290	4,443	4,388	16,707
Imports	3,829	4,348	4,149	4,625	16,951

[3] In the seasonally adjusted series, the value of grain production in each quarter is taken as one-fourth of the estimated value of crop production for t year as a whole. All other items in the farm inventories series are seasonally adjusted by standard techniques.

[4] Revised figures not incorporated into the Accounts as shown in the "Quarterly Estimates of the Canadian Balance of Payments, Second Quarter, 1969 DBS Catalogue No. 67-001, are as follows:

Exports	16,128	16,648	16,576	17,476	16,707
Imports	16,580	16,360	16,968	17,896	16,951

---

[1] The implicit price deflators of the seasonally unadjusted components of Gross National Expenditure, derived by dividing the value figures in current dol-
ars by the constant dollar figures, are not suitable as indicators of quarter-to-quarter prior change. This is because they are currently weighted and therefore
re affected by compositional shifts which occur within unadjusted components of Gross National Expenditure, on a quarter-to-quarter basis. Quarter-to-quarter
omparisons based on seasonally adjusted data are less subject to the problem of shifting weights and may be used as a measure of price change.

[2] Revised figures not incorporated into the Accounts as shown in the "Quarterly Estimates of the Canadian Balance of Payments, Second Quarter, 1969"
BS Catalogue No. 67-001, are as follows:

Exports	3,129	3,727	3,810	3,829	14,495
Imports	3,380	3,834	3,639	4,082	14,935

[3] Revised figures not incorporated into the Accounts as shown in the "Quarterly Estimates of the Canadian Balance of Payments, Second Quarter, 1969"
BS Catalogue No. 67-001, are as follows:

Exports	14,024	14,436	14,376	15,144	14,495
Imports	14,684	14,440	14,960	15,656	14,935

Canadian Statistical Review Supplements

04 *Weekly Supplement to the Canadian Statistical Review*—Free to *Canadian Statistical Review* subscribers.

Contains figures produced by the DBS and other agencies which are released during the week of issue. The data will, of course, appear in the following issue of the *Canadian Statistical Review*. Designed to keep users of the *Review* closely informed of the most recent changes in the major statistical series.

06 *Annual Supplement to the Canadian Statistical Review*—Price $1. (Free to *Canadian Statistical Review* subscribers).

Contains monthly and quarterly historical records, adjusted and not adjusted for seasonality, of all the series in the "S" section of the *Canadian Statistical Review*. The series extend back to 1946 or as far back as the data are available.

Other Statistical Publications

03 *Historical Monthly Statistics* (Occasional)—Price $1.50 (Released January 1964).

Contains monthly statistics extending into the inter-war period or longer for 33 selected series in the fields of prices, industrial production, industrial employment, external trade, retail trade, railway transportation, finance, and commercial failures. For all fields except prices the data include original unadjusted series and their corresponding seasonally adjusted series and seasonal indexes.

CANSIM Manuals and other Publications

- *CANSIM: An Introduction to the Canadian Socio-economic Information Management System*—Free.

30 *CANSIM: Operational Manual for Data Entry* (Occasional)—Price $1.

This manual will be of practical interest only to federal government agencies which store and maintain time series in the CANSIM data base. Users desiring a fuller knowledge of the codes used and the storage methodology will find this volume a useful companion to the "Retrieval Manual".

Catalogue
number Title and Description

CANSIM Manuals and other Publications (Cont'd)

12–531 *CANSIM: Users' Manual for Data Retrieval and Manipulation* (Occasional)—Price $1.50

Gives detailed instructions on procedures for obtaining data on magnetic tape from the CANSIM data base. The initial very rudimentary retrieval package described will be enlarged and improved; the manual will be expanded and modified accordingly. Existing "commands" will, however, continue to be supported.

— *CANSIM: Summary Reference Index*—Free on request.

This index represents a key to the contents of CANSIM, the CANSIM Socio-economic Information Management System, and is the first step in location and ordering time series from the system.

— *CANSIM Matrix Directory*—Free on request.

This directory lists in numerical order all matrices (roughly equivalent to a table) stored in CANSIM. Here the user finds for each matrix a title which gives a general description of the series included, the data source and, in some cases, a matrix note providing additional information of importance.

— *CANSIM Series Directory*—(Order by matrix number. Purchaser pays nominal charge to cover the cost of reproduction).

This directory contains titles and other descriptive detail for all series in the matrix. It is used in conjunction with the *CANSIM Manual for Data Retrieval and Manipulation* (12–531) to order series from DBS. May be ordered for specified matrix numbers.

This Review, the above and other publications of the Dominion Bureau of Statistics, including a free annotated catalogue of current publications, may be ordered from Publications Distribution, Dominion Bureau of Statistics, Ottawa, Ont., or from the Queen's Printer, Ottawa, Canada, and remittances made payable to the Receiver General of Canada. For further information direct inquiries to:

General Time Series Staff,

About the Tables

Changes occur from time to time which affect time series published in this Review. For all series included, historical data are included in CANSIM (Canadian Socio-economic Information Management System), which is the DBS computerized time series data bank, and are revised and updated immediately information becomes available. In instances where the continuity of a series is seriously affected by changes such as in the Standard Industrial Classification, CANSIM contains both the unrevised historical data (as a closed file), and the new revised series with its shorter history.

The MCD – Months for Cyclical Dominance, shown for seasonally adjusted series, is explained on page 8.

Revised National Income and Expenditure Accounts, 1968 and 1969 (pages 105-107)

DBS recently released the summary results of a complete and comprehensive revision of the National Income and Expenditure Accounts. This revision was carried out at the annual level only; a revision of quarterly estimates is now underway and will not be available for some time. During the interim period, 1968 quarterly data previously published have been restructured into the new framework of the accounts and then adjusted arithmetically to the new annual totals; these revised estimates have been linked forward for the first two quarters of 1969. Data are given for the income and expenditure tables only and for GNE in constant (1961) dollars; a full set of tables will be prepared at the time of the fourth quarter.

Changes in this Issue

National Income and Expenditure Accounts (Page S-9). – Revised seasonally adjusted data arising from the historical revision of the National Income and Expenditure Accounts are presented on page S-9. The series Personal Expenditure on Consumer Goods and Services replaces the Personal Disposal Income series, which is not yet available on a revised basis. Revised annual data from 1964 to 1968 are shown on the graphs, along with the quarterly series from 1968 to date. The annual series were published in the September 17 issue of the Weekly Supplement.

Employment Indexes (Tables 28 and 29 and Page S-3). – The seasonally adjusted data for employment indexes have been revised from 1961 to date. Revised data are available on request.

Average Hourly Earnings and Average Weekly Hours in Manufacturing (Page S-4). – The seasonally adjusted data for average hourly earnings and average weekly hours have been revised from 1961 to date. Revised data are available on request.

PUBLICATION OF 1961 INPUT-OUTPUT TABLES FOR CANADA

T. Gigantes*

Introduction

Input-Output Accounts contain detailed and comprehensive information on the origin (domestic and imported) of individual commodity groups, and on their disposition to industrial users and to final consumers – persons, governments, industries (on capital account) and non-residents (exports). They also contain the cost structures of individual industries. This information is of interest to businesses, governments and academics concerned with market and industrial analysis. These Accounts are also used as the basis for models of the operation of the economy. The data embodied in a set of Input-Output Accounts describe the structure of demand and of productive activity in a particular year. It has been found that many of these structural relationships have considerable stability even when the conditions under which they were first observed change.

The construction of economic models based on the information contained in Input-Output Accounts rests on the observation that the process of production, in modern technological societies, is roundabout. To produce an automobile, for example, requires the efforts not only of those who are in the automobile industry, but also of those who are concerned with the production of steel, aluminum, rubber, textiles and the myriad of other materials and services which are embodied in automobiles. In turn the production of steel, aluminum, rubber, etc. is only possible if yet other materials and services have been produced and are available. Thus the production of automobiles, and indeed of any other product, implicates a long chain of production which links many of the human, material and technological resources of the economy.

Now if the human, material and service inputs into automobiles are stable in relation to the output of automobiles, and if, in turn, the requirements for producing steel, aluminum, rubber, etc. are stable, and so forth, then through mathematical models based on Input-Output Accounts it is possible to estimate the impact of the (final) demand for automobiles not only on the production of the automobile industry but also on the production of all the other industries which are involved, however indirectly, in the production of automobiles; similar estimates can be made for any other commodity. Input-Output models thus make it possible to study technological interdependence and to trace the propagation of demand through the economic system. Moreover, these models can be formulated so that the incomes and revenues generated by industrial activity in turn determine the level and composition of a large proportion of final demand. In this way, Input-Output models can be made to stimulate the circular flow of economic activity.

Of course, Input-Output models present a simplified account of economic interdependence. Since their inception they have undergone many changes designed to make them more realistic, but it is inevitable that they will continue to be very simple constructs compared to the complexity of economic systems. In this they are not unique; all models of economic behaviour represent a simplification of reality.

Because Input-Output models present economic relations in a highly disaggregated form, they lend themselves to analyses which are not possible with aggregative models, particularly where the interdependence of sectors of the economy is being studied. They have been used throughout the world for a variety of analytical purposes by governments, businesses and universities.

The Dominion Bureau of Statistics has recently published, in two volumes, a set of Canadian Input-Output Tables for the year 1961:

DBS Catalogue No. 15-501 "The Input-Output Structure of the Canadian Economy, 1961 – Volume 1", Price: $4.00.

DBS Catalogue No. 15-502 "The Input-Output Structure of the Canadian Economy, 1961 – Volume 2", Price: $3.00.

Volume 1 contains: (a) a description of the conceptual framework of the accounts; (b) a description of some analytical uses; (c) the classification systems for commodities and industries; (d) the Accounts themselves in relatively aggregated form; (e) analytical tables derived from these Accounts.

Volume 2 contains the Input-Output Accounts and the corresponding analytical tables in more detail. (All of the descriptive material relating to the tables in Volume 2 is contained in Volume 1.)

All of these tables are preliminary; they will be published in final form as soon as reconciliation with the revised base period (1961) estimates of the Income and Expenditure Accounts is completed.

These publications carry a general heading, "System of National Accounts", thus formally incorporating Input-Output Accounts as part of such an integrated system in Canada. Chapter 1 of Volume 1 provides a brief outline of the relationship of the Input-Output Accounts to the System of National Accounts and, in particular, to the Income and Expenditure Accounts and the Indexes of Real Domestic Product by Industry.

---

* Mr. Gigantes is Co-ordinator of Input-Output Research Development in the Economic Statistics Branch of the Dominion Bureau of Statistics.

Some Features of the Accounts and Analytical Tables

The Canadian 1961 Input-Output Accounts have features which are not characteristics of conventional Input-Output Accounts. In the latter, both the intermediate inputs of industries and the outputs of industries are shown in a single table, the rows of which contain the flows of the output of each industry to the industries which use this output as an intermediate input, while the columns contain the intermediate inputs of each industry, all measured in dollar values. Such a table is square, i.e., has the same number of rows and columns, both of which are classified by industry.

In the 1961 Canadian Accounts, commodities (goods and non-factor services) are clearly distinguished from industries, the number of commodities being greater than the number of industries. Separate rectangular tables are presented for outputs and inputs. The output table shows the values of commodities produced by industries; the input table shows the values of commodities used by industries.

The introduction of commodities as a dimension of the system has a number of advantages; industries are portrayed as groupings of establishments which absorb a number of commodity and primary inputs to produce a number of commodity outputs. This formulation of the system poses explicitly a problem which is implicit in conventional Input-Output analysis, namely, the way in which the demand for a commodity is to be distributed among the industries which produce that commodity. The analytical tables based on the Canadian Accounts therefore require, in addition to the traditional production functions, marketing functions which distribute commodity demands to producing industries.

The framework of the 1961 Canadian Accounts is depicted in Diagram 1:

DIAGRAM 1[1]

	Commodities	Industries	Categories of Final Demand
Commodities		1	2
Industries	3		
Imports	4		
Categories of Primary Inputs		5	6

Matrix 1 contains the values of intermediate commodity inputs of industries. Matrix 2 contains the final uses of commodities classified according to catagories of final users. In the recently published preliminary Accounts the classification of categories of final users is highly aggregated. In the final version of the Accounts these categories will be expanded to include the following:

(a) Personal expenditures on consumer goods and services classified according to the categories of personal expenditure as defined in the Income and Expenditure Accounts.

(b) Government expenditure classified by two levels of government and by function (e.g., education, health, defence, etc.).

(c) Gross fixed capital formation. (The Bureau is attempting to compile a capital input table for a highly aggregated grouping of industries. It is not clear yet that this attempt will be successful.)

(d) Value of the physical change in inventories.

(e) Exports classified by country of area of destination.

For any commodity, the entries in Matrices 1 and 2 of Diagram 1 represent demand. The corresponding supply is contained in Matrices 3 and 4. Matrix 3 contains the value of the domestic production of each commodity classified according to the industry which produces it. Matrix 4 has a single row which contains the competing imports of each commodity.

---

[1] In the context of this diagram, a matrix consists of a rectangular array of dollar value figures. For example, if there are 40 commodities and 16 industries, then Matrix 1 has 40 rows (one for each commodity) and 16 columns (one for each industry).

Matrices 1 and 2 contain the expenditures of industries and categories of final expenditure on commodities. The balance of the expenditures of industries and categories of final expenditure is contained in Matrices 5 and 6. These are expenditures on primary inputs which in the 1961 Canadian Accounts include the following:

(a) Non competing imports

(b) Balance of payments adjustment

(c) Commodity taxes

(d) Subsidies

(e) Indirect taxes and government services

(f) Wages, salaries, and supplementary labour income

(g) Net income of unincorporated business

(h) Surplus

The valuation of the commodity entries in all these tables is at producers' prices. However, the relevant matrices of margins have been calculated so that the tables can be expressed at purchaser's prices if required.

The tables have been compiled for 187 industries and 644 commodities. At that level of detail many entries are confidential under the relevant provisions of the Statistics Act. The tables are published at three levels of aggregation involving 16 industries and 40 commodities, 65 industries and 65 commodities (both published in Volume 1) and 110 industries and 197 commodities (published in Volume 2). Arrangements are being made to provide this information to users in machine-readable format upon request.

In addition to the dollar value Accounts and the corresponding coefficient tables, a number of analytical tables are published. These have the same function as conventional Leontief inverses,[1] except that some of them are rectangular. They show the direct and indirect effects on industry outputs of a dollar of final demand for each **commodity.** The direct and indirect effects on primary inputs of a dollar of final demand for each commodity are also published; the direct and indirect effects on **commodity** outputs can be computed. Thus, these analytical tables can be used to estimate the levels of industry outputs, primary inputs, commodity outputs and, in some cases, the levels of competing imports associated with any given configuration of final demand classified by commodity. Such configuration might, for example, stimulate particular government expenditure policies which are being evaluated or they might represent final demand projections for future periods.

Tables which allow transformation of levels of final demand valued at purchasers' prices to those at producers' prices are also provided.

These analytical tables are based on models which involve two sets of assumptions: that the input coefficients of each industry are stable; that the market shares of industries in the production of each commodity are stable.[2] These are not the only assumptions or models that are possible given the 1961 Canadian Tables; the framework can be used to formulate a variety of models, some of which are discussed in the text of Volume 1.

Future Plans

The Bureau intends to continue its programs of compiling and publishing Input-Output Tables and of carrying out research on Input-Output techniques. In the immediate future the Bureau's priorities involve the establishment of automated flows of data to the Input-Output projects so that the time involved in compiling Input-Output Tables can be curtailed. The Bureau is also experimenting with the use of mathematical updating techniques in conjunction with information available annually to set up a routine for updating Input-Output Tables on a regular basis.

---

[1] See W. Leonfief, The Structure of the American Economy, 1919-1939 (2nd edition), Oxford University Press, 1951.

[2] One set of analytical tables extends this assumption to competing imports which are also assumed to preserve their share of the market.

CANSIM

(Canadian Socio-economic Information Management System)

CANSIM is a fully computerized time series data bank developed in the DBS. All or any part of the data bank contents (currently some 8000 time series) may be purchased either in machine readable form (magnetic tape, cards) or as a computer print-out. Details of this service are contained in the various CANSIM documents listed on the inside back cover and in the CANSIM note on page iv of the August 1969 issue.

TECHNICAL NOTES

Presented below is a list of technical notes published in previous issues of the Review.

1. Index of Real Domestic Product (Including the Index of Industrial Production). (August 1968)
2. Consumer Price Index. (September 1968)
3. Consumer Price Indexes for Regional Cities. (November 1968)
4. Manufacturing Inventories, Orders and Shipments, Historical Data. (January 1969)
5. Wholesale Trade. (June 1969)
6. Canadian Inter-city Retail Price Differentials. (June 1969)

SELECTED ECONOMIC INDICATORS

SEASONAL ADJUSTMENT

A number of important economic time series are presented in unadjusted and seasonally adjusted form in the Canadian Statistical Review. Seasonally adjusted data are most useful for analysis and forecasting as they bring out the underlying trends of economic time series. Seasonal adjustments remove the effect of repetitive intra-year variations resulting from normal differences in weather, holidays with invariable dates, or other events which repeat with the same timing. Additional adjustments may be necessary for series which contain variation due to the difference in working or trading-days in each month or for holidays or other events with variable dates. Such adjustments are made prior to the seasonal adjustment but are treated as part of the seasonal adjustment.

The seasonal adjustment method applied to economic time series at the Dominion Bureau of Statistics is a computerized ratio-to-moving average method. The standard computer program used in the Bureau is the US Bureau of the Census Method II. The X-9 version is used for Labour Force data; for other data adjusted by computer the X-11 version is used.

MCD – MONTHS FOR CYCLICAL DOMINANCE

In seasonally adjusted series, month-to-month changes are often dominated by irregular movements, which may obscure the underlying trend-cycle. The MCD (months for cyclical dominance) in a table containing seasonally adjusted series indicates the smallest span of months for which the average change in the cyclical factor is greater than that in the irregular factor. For the smoothest series the MCD is 1, for the most erratic series it is 6. Applying moving average of the period equal to the MCD tends to smooth the series. The smoothed series will show the cyclical movements as clearly as series with an MCD of 1.

SMOOTHING OF SEASONALLY ADJUSTED SERIES

Smoothed data have been used for the graphs of some of the seasonally adjusted series with MCD of 4, 5 or 6. A 5-term moving average was applied for smoothing these series.

ABOUR FORCE (More detail in Table 19)

TOTAL LABOUR FORCE AND UNEMPLOYMENT INCREASED IN SEPTEMBER, WHILE EMPLOYMENT WAS UNCHANGED. NEMPLOYMENT WAS 5 PER CENT OF THE LABOUR FORCE.

		total labour force	total employed	employed non-agriculture	unemployed	unemployment rate	not in the labour force

---

[1] The occupational status of the majority of the persons destined to the labour force is determined by immigration officials by an examination of documentary evidence provided by the immigrants. The classification of occupations is similar to that used in the 1961 Census; see Occupational Classification Manual, Census of Canada, 1961, Catalogue Number 12-506. [2] Includes logging, fishing, trapping and hunting. [3] Includes mechanical and construction. [4] Includes a small number in non-specified occupations. [5] Does not include students entering Canada on students' visas. [6] Includes also retired persons, elderly dependents, fiancés or fiancées and other unspecified persons not intending to enter the labour force. **Source: Quarterly Bulletin, Department of Manpower and Immigration.**

---

[1] Includes change in farm inventories. The seasonally adjusted data include an arbitrary smoothing of crop production, standard seasonal adjustments for withdrawals of grain from farm stocks and the change in livestock items. Because of arbitrary elements, too precise an interpretation should not be given to the series. [2] Includes residual error of estimate. **[3] Revised data arising from the historical revision of the National Income and Expenditure Accounts are presented on pages 105-107 of this issue. Source: at bottom of Table 14.**

---

[1] Excludes inmates of institutions, members of the armed services, Indians living on reserves and residents of the Yukon and Northwest Territories. The estimates are derived from a sample survey and are subject to sampling error. In general, the smaller the estimate, the larger is the relative sampling error. [2] The labour force as a percentage of the population 14 years of age and over. [3] The unemployed as a percentage of the labour force. **Source: Labour Force Bulletin, (71-001), D.B.S.**

[1] See footnote 1, table 19. Labour force obtained as the sum of employed and unemployed from tables 21 and 23. [2] Canada totals, obtained by summing the seasonally adjusted data for the five regions, are usually different from the totals given on page S-1. The small differences result from the seasonal adjustment of the Canada and regional data having been carried out independently of each other. **Source: The Labour Force, (71-001) D. B. S.**

---

[1] In calculating time loss, only the workers directly affected by the strike or lockout are taken into account; time lost by workers indirectly affected, such as those laid off as a result of a work stoppage is not included. [2] The statistics for individual industries exclude strikes and lockouts involving fewer than 100 workers; the total, however, includes all work stoppages. The agricultural, finance, insurance and real estate and public administration and defence industries are not shown separately; should strikes occur in these industries, they also will be shown in the total. [3] Includes miscellaneous manufacturing industries. [4] Includes also publishing and allied industries. [5] Includes also the storage and communication industries.

*Revised monthly data will be available later.

[1] The data in Tables 28 to 35 are based on reports from firms employing 20 persons or more in any month of the year and relate to the last pay periods in the month. Greater industrial and area detail and more explanatory notes are given in the source publication named below. [2] Excludes agriculture, fishing, trapping and public administration and defence. [3] Includes storage, electric power, gas and water utilities. [4] Excludes domestic service. **Source: Employment and Average Weekly Wages and Salaries, (72-002), D.B.S.**

[1] See footnote 1 and source in Table 28. [2] Employment indexes in total manufacturing and in its total durable and non-durable components are given in Table 28. [3] In addition to those listed, tobacco products; knitting mills; printing, publishing and allied; and miscellaneous manufacturing industries are included in non-durable manufacturing. [4] Except machinery and transportation equipment industries.

[1] The data for the current year are subject to revision. [2] Includes gold. [3] Consists of general wholesale index less animal products and vegetable products component groups. [4] Consists of iron products and non-ferrous metals products component groups less gold. [5] These two series comprise the general wholesale index. [6] Excludes gold. **Source: Prices and Price Indexes (62-002), D. B. S.**

[1] Total commodities and services does not add up to 100 per cent; the portion of shelter which includes taxes and mortgage interest, and amounts to 8 per cent, is excluded. [2] These indexes measure **within each city** the percentage change in consumer prices from the base period to the subsequent time periods. **They cannot be used to compare levels of prices between cities. Information on inter-city retail price differentials is contained in technical note No 6 published in the June 1969 issue of the Canadian statistical review.** **Source: Prices and Price Indexes (62-002), D. B. S.**

Table 40: total inventories, shipments and orders in manufacturing based on the 1960 standard industrial classification (million dollars)

monthly averages or months	shipments[1]	new orders received during month[3]	unfilled orders at end of month[4]	inventory at end of month						ratio of inventories owned to shipments

---

[1] Monthly shipments represent an estimated projection of the latest available Census of Manufacturers values except for those industries whose long-term contracts result in large intermittent shipments; for these a monthly estimate of work put in place has been substituted. [2] Total manufacturing inventory owned by manufacturers including warehouse stocks. [3] Total new orders received during the period at estimated selling value, net of cancellations, regardless of whether the orders will be filled from stock or as a result of activity during the same month. [4] Annual figures for inventories and unfilled orders are end of December values.

Source: Inventories, Shipments and Orders in Manufacturing Industries (31-001), D.B.S.

Table 41: manufacturing shipments[1] by industry based on the 1960 standard industrial classification (million dollars)

monthly averages or months	total shipments	non-durables	durables	foods and beverages	tobacco products	rubber	leather	textile	knitting mills	clothing	wood

[1] Monthly shipments represent an estimated projection of the latest available Census of Manufacturer's values except for those industries whose long term contracts result in large intermittent shipments; for these a monthly estimate of work put in place has been estimated. **Source: Inventories, Shipments and Orders in Manufacturing Industries (31-001), D.B.S.**

[1] Starting with January 1968, production is manufacturers' production; prior to that date production was indicated by the use of excise duty stamps. [2] Intended for cigarettes. [3] Includes sales to wholesalers or retailers. [4] Subject to Excise Tax. [5] Includes sales for ships' stores and for export. [6] End of period. [7] Includes smoking, chewing and twist. **Sources: Tobacco and Tobacco Products Statistics Quarterly (32-014), D. B. S.; and Department of National Revenue.**

[1] Prior to 1964 data are not entirely comparable since they are on a production basis. [2] Includes slims and stretch pants. [3] Made from woven fabrics: shorts. [4] Starting with first quarter of 1968, "women's and Misses' category" becomes "Women's, Misses' and Juniors'". Data are not changed. **Source: Garment Shipments (34-001), D. B. S.**

---

[1] Total pulp production covers "screenings" which are already included in exports. "Screenings" are excluded throughout from mechanical and chemical pulp. [2] 100 cu. ft. of solid wood; pulpwood produced for domestic use and excluding exports, but including receipts of purchased roundwood. [3] Customs exports. [4] Mill shipments destined for export. **Sources: Pulpwood and Wood Residue Statistics (25-001), Trade of Canada, Exports (65-004), D.B.S; Bulletins of Canadian Pulp and Paper Association and Newsprint Association of Canada.**

[1] Data compiled according to the Steel Distribution Index revised January, 1964. Figures on net shipments relate to rolled steels products only. Shipments to consuming industries of castings, forgings and steel pipe are not included. [2] Includes building contractors, public and utility construction, structural steel fabricators, national defence and public works and utilities. [3] Includes appliances and utensils. Note: Some groupings are not entirely comparable to year 1964 due to change in classifications but in general the differences are minimal. [4] Excluding shipments for re-processing at maker's own plant. [5] Data on shipments of steel shapes to consuming industries are being withheld pending settlement of strikes in this industry. **Source: Primary Iron and Steel (41-001), D. B. S.**

[1] Production plus imports less re-exports. [2] Commencing January 1967, the value of new motor vehicles sold in Canada (as reported by manufacturers and distributors) was based on "actual cost to purchaser" rather than the suggested list price as in the past. **Sources: Motor Vehicle Shipments (42-002), New Motor Vehicle Sales (63-007), Trade of Canada, Imports (65-007), Exports (65-004), and Credit Statistics (61-004) D.B.S.**

[1] Includes record players. [2] Includes producers' shipments for export. [3] Includes portables. [4] Radio phonograph combinations. [5] Includes monaural and stereo with and without amplifiers. [6] Excludes producers' shipments for export. [7] Included with "total television receivers". [8] Customs clearance; radio sets include all types; television sets include colour and black and white. **Sources: Radio and Television Receiving Sets (43-004); Trade of Canada, Imports (65-007), D.B.S.**

Note: Components may not add to totals due to rounding. Current figures in this table are preliminary and therefore subject to revision. [1] Includes crude oil, condensate and pentanes plus. [2] Deliveries to refineries and exports do not add to total new supply due to losses, other uses and inventory changes. [3] Gross new production by field less field flared and waste. [4] By gas utilities. **Sources: Crude Petroleum and Natural Gas Production (26-006), Refined Petroleum Products (45-004), Gas Utilities (55-002), D. B. S.**

---

[1] Barrels of 35 Canadian gallons. [2] Includes domestic and imported crude oil, condensate and pentanes plus received by Canadian refineries. [3] Refinery production (from crude oil, condensate and pentanes plus, and commingled propane/butane mixes) plus other materials used. [4] Includes deliveries of butane commingled in the crude stream in Saskatchewan and Alberta. [5] Includes inventories at end of period being held at gas plants and in storage caverns. [6] Includes stove oil, kerosene and tractor fuel. [7] Includes aviation gasoline and aviation turbo fuel. [8] Due to conceptual changes, the stock and sales series are not available on a comparable basis prior to June 1965. Includes propane and propane mixes and butane and butane mixes. [9] Includes petro-chemical feed stocks, naphtha specialties, coke, lubricating oil and grease, still gas and other products. **Source: Refined Petroleum Products (45-004), D. B. S.**

Note: Components may not add to totals due to rounding differences. [1]The data are collected for 1,400 municipalities and individual figures are available on request. [2]Historical data back to 1920 are available in "Historical Monthly Statistics" Catalogue No. 11-503, occasional. Starting with January 1966, the number of municipalities has been reduced to 56 following the annexation of the town of Riverside to the city of Windsor. **Source: Building Permits (64-001), D.B.S**

---

[1]The coverage was extended to 507 municipalities in 1948, and as of 1965, stands at more than 1,400; minor revisions are still being required in the table, due to the non-receipt of returns from a few small places. No account is taken of the building activity outside of registration areas. Actual operations normally follow the granting of permits but a number of projects are not undertaken or abandoned. The amount depends upon the statement of the applicant and considerable change may develop before the completion of the operation. **Source: Building Permits (64-001), D.B.S.**

---

[1] A dwelling unit is defined as a structurally separate set of living quarters having its own entrance from outside of the building, or from a common passage inside. These data are the result of a nation-wide survey, for which the field work is carried out by the Central Mortgage and Housing Corporation. All metropolitan areas and urban centres with a population of 10,000 or more, along with certain other areas of high building activity, are enumerated completely each month. The remainder of the country is covered on a sample basis quarterly. [2] End of period. **Source: New Residential Construction (64-002), D. B. S.**

---

[1] Cash receipts from farming operations excluding supplementary payments. Excludes Newfoundland. [2] Represents participation payments made by the Canadia Wheat Board direct to producers on crops delivered in previous years. [3] Includes rye, flaxseed, rapeseed, soybeans and corn. [4] Includes clover and grass seed, hay, clover, greenhouse products, mustard seed, sunflower seed, hops, dry beans and dry peas and miscellaneous products. [5] Made under the authority of th Agricultural Stabilization Act. **Source: Farm Cash Receipts (21-001), D. B. S.**

Note: Components may not add to totals due to rounding. [1] The estimates for the current year are subject to revision since the factors used in the blow-up are based on the previous years' operations and may change when the current annual totals for all firms are known the following year. [2] Excluding trucks. [3] The total value of all machines shown in this table is greater than the value shown for farm machinery in Table 87 which covers wholesalers proper only. The above table covers all sales to users and includes sales by manufacturers through their agents as well as the sales of importers and other dealers made directly to users. Even though sales are to users, i.e. farmers, values are stated at wholesale prices, i.e. cost to dealers. **Source: Farm Implement and Equipment Sales (63-009), D.B.S.**

[1] These indexes are available for January, April and August only. [2] Average rates of cash wages paid per month to male hired help on farms. They reflect the average of the wages paid to all male farm help regardless of age and skill. Data are available for January, May and August only. [3] Exclusive of Newfoundland. Western grain prices used in the construction of the Index prior to August 1, 1967 are final prices. From August 1, 1967 to date, the western grain prices used in the Index are initial prices only for wheat, oats and barley. [4] Barley No. 1 feed; hogs grade "B" alive. [5] Price of 100 lbs. good steer as a percentage of the price of 100 lbs. live hog, grade B. Effective January 1969 as a percentage of the price of 110 lbs. live hog. [6] Price of 100 lbs. good steer as a percentage of the price of 100 lbs. good lamb. [7] Quotations refer to steers of all weights. [8] Grade "B" hogs. Effective January 1969 prices based on index 100, hogs. **Sources: Price Index Numbers of Commodities and Services Used by Farmers (62-004); Farm Wages in Canada (21-002) Occasional; Coarse Grains Quarterly (22-001); Index Numbers of Farm Prices of Agricultural Products (62-003), D. B. S. and Livestock and Meat Trade Report, Dept. of Agriculture.**

[1] As at end of period. Last month is preliminary. [2] Milk equivalents of cottage cheese are not included in the monthly figures but are included in the monthly averages. [3] Includes butter and cheese imported and in (railway) transit through June 30, 1968. [4] Exclusive of Newfoundland; includes hatching eggs. [5] Includes case and bulk. **Sources: Dairy Factory Production (32-002), Dairy Review (23-001), Stocks of Dairy and Poultry Products (32-009), Production of Eggs (23-003), D. B. S.**

[1] Customs exports are adjusted to reflect actual physical movement of wheat flour from Canada. Data shown for the last current year are not so adjusted. [2] Production is calculated as the sum of the current manufacturers' shipments and the net change in manufacturers' inventories from the previous months. [3] Includes stocks held by manufacturers, wholesalers and other warehouses. [4] Includes baking and frying oils and fats. [5] Includes stocks held by manufacturers and other warehouses. [6] Includes beef stews and boiled dinners. [7] Includes fresh sausage, frankfurters, weiners and all other sausage. [8] Includes solid, coated, bulk, packages and novelties. [9] Includes tomato sauce, sauces for meat and fish and sauces, other. **Sources: Grain Milling Statistics (32-003), Oils and Fats (32-006),** Quarterly Reports, **Biscuits and Confectionery (32-016), Fruit and Vegetable Preparations (32-017) and Miscellaneous Food Preparations (32-018), Monthly Production of Soft Drinks (32-001),** Monthly Report, **Meat and Meat Preparations, D. ---

[1] Total value of retail trade seasonally adjusted includes sales of department stores, general merchandise stores, variety stores and all other stores. Due to changes in definition of department stores, the re-classification of some variety store firms and the introduction of general merchandise stores, formerly in all other stores, the unadjusted and seasonally adjusted department store data for 1968 and subsequent years are not comparable with the data of previous years. **Source:** Retail Trade (63-005), D. B. S.

[1] Department store stocks at end of period at selling value. The sales and stocks data are revised series based on the results of the 1961 Census of Merchandising and Service Establishments. [2] Due to changes in definition of department stores and the introduction of general merchandise stores, formerly included in all other stores, the 1968 and 1969 figures are not comparable with the data of previous years. **Source: Department Store Sales and Stocks (63-002), D. B. S.**

*Credit extended mainly to individuals; includes unidentifiable amounts of credit extended for non-consumer purposes; excludes certain forms, mainly service credit extended by doctors, dentists, lawyers, pawnbrokers, travel companies, restaurants and personal credit for which no statistics are available. [1]Conditional sales agreements held in connection with the financing of retail purchases of consumers' goods and repaid in instalments. [2]Companies licensed under the Small Loans Act and affiliated compagnies engaged in making personal loans. [3]Cash loans with no conditional sales contract but usually repaid in instalments. [4]Personal loans other than those fully secured by marketable bonds and stocks and other than home improvement loans. [5]Loans other than secured loans and mortgage loans. [6]Figures for dates other than year-end are estimated on the basis of loans made by sixteen companies. [7]Sum of instalment credit of clothing, hardware and jewellery stores, fuel dealers and "all other trades" in Table 89. [8]Sum of charge accounts of clothing, hardware, independent grocery and combination stores, jewellery and general stores, fuel dealers, garages and filling stations and "all other trades" in Table 89. [9]Amount owing to oil companies ex commercial accounts. [10]Personal loans only. [11]The data for Quebec savings banks loans and motor vehicle dealers are not seasonally adjusted as no seasonality is present; these series are repeated in the unadjusted form. **Sources: Credit Statistics (61-004), D. B. S.; Bank of Canada, Dept. of Insurance, Dept. of Finance and Dept. of Agriculture.**

[1] Monthly averages for 1966 and 1967 may differ from the averages of the monthly data due to revisions which cannot be allocated by months. [2] Data in s table refer to class 1 and class 2 carriers which are railways with gross annual operating revenues of $500,000 or over. Includes operations of United Sts railways operating in Canada but excludes operations of Canadian railways in the United States. [3] Includes traffic interchanged between Canadian railways. **Sourc Railway Operating Statistics (52-003) monthly, and (52-206) annual, D.B.S.**

[1] Monthly averages for years 1965 and 1966 differ from the averages of the monthly data due to revisions which cannot be allocated by months. [2] Includes scheduled and non-scheduled carriers, groups I to IV. These groups cover all air carriers with gross operating revenues of over $60,000 annually prior to January, 1964 and over $100,000 annually since. [3] United States and other foreign carriers having scheduled services into and out of Canada. Excludes passengers in transit through Canada. [4] Cargo includes air freight and express but excludes mail and excess baggage. [5] Data prior to 1964 do not include bulk transportation. Because of survey limitations, data on bulk transportation after January 1, 1964 refer only to aircraft having a minimum authorized take-off weight on wheels in excess of 18,000 lbs. **Source: Civil Aviation (51-001), D. B. S.**

---

[1] Data from February 1967 onwards for net receipts include gathering and trunk lines. Prior to that date they include trunk lines only. [2] Excludes distribution systems. [3] Received from field and processing plants by transport systems. [4] Starting with 1967, operating revenues of crude oil products are no longer available separately; they are included with the crude oil operating revenues. **Sources: Oil Pipeline Transport (55-001) and Gas Utilities (55-002), D.B.S.**

---

[1]The statistics of failures in this table are limited to those bankruptcies filed under Federal legislation (the Bankruptcy and Winding-Up Acts) and does not include failures, sales or seizures carried out under other legislation.The figures for Atlantic provinces may be obtained by subtracting the sum of Quebec, Ontario, Prairie provinces and British Columbia from the total. [2]In the Bankruptcy Act of 1949, provision is made for proposals from insolvent persons. Agreements made under this method are not included with the statistics of bankruptcies. Liabilities of insolvent persons making proposals are not available. **Source: Commercial Failures (61-002) Quarterly, D. B. S.**

[1] Bank of Canada deposits are averages of the juridical days in the month shown while Bank of Canada notes and Canadian dollar deposit liabilities are aver-
ges of the 4 consecutive Wednesdays ending with the second last Wednesday in the previous month. [2] Mainly deposits of foreign banks. [3] Capital, rest fund and
ndivided profits as at the latest fiscal year-end. [4] Including issues payable in foreign currency. [5] Securities purchased direct from issuer with a term of less than
e year at time of issue are classified as loans. [6] Excluding Canadian day-to-day loans. [7] Loans to grain dealers and exporters. [8] Loans to finance purchase of
anada Savings Bonds at time of issue. [9] Total of foreign funds, short term foreign investments and other foreign currency assets less foreign currency liabilities.
Including loans to instalment finance companies. **Source: Statistical Summary of Bank of Canada.**

---

[1] The definition of profits before taxes is based mainly on the accounting definition used by corporations. However, depletion charges are added back to net rofits while Canadian dividends received are excluded from profits in order to avoid duplication. The term "profits" as used here means the total profits of all ompanies earning profits less the losses of all companies incurring losses. Estimates are based on profits as reported by sample of all companies incorporated in anada (excluding government-owned companies). [2] As is evident from the above footnote, the data reporting unit is the company; the data are therefore not entirely omparable with data where the establishment is the reporting unit. [3] Includes also the furniture and furnishings industry. [4] Includes the primary metal, the metal abricating, the machinery and the transportation equipment industries. [5] Includes tobacco products, leather and miscellaneous manufacturing industries. [6] Includes lso storage and communication industries. [7] Includes agriculture, forestry, fishing and construction. **Source: Corporation Profits (61-003), D.B.S.**

[1] The number of stocks included has varied over the period; the totals shown in the column headings represent the current coverage. [2] The headings for "ba metals" and "industrial mines" are not found in the Standard Industrial Classification. [3] Combines the industrials, utilities and finance common stocks. [4] Stoc included in industrial mines are listed on the exchanges as industrials. Their operations include smelting and refining. [5] Includes also the machinery industri (except electrical machinery) and the transportation equipment industries. [6] Stocks included in the mining index are for producing mines. Sources: Pric Movements (62-001), and Prices and Price Indexes (62-002), D.B.S.

Corporation profits before taxes	6,744	7,164	7,548	8,312	7,442	8,284	8,312
Deduct: Dividends paid to non-residents[1]	− 836	− 980	− 940	− 748	− 876	− 868	− 856
Interest, and miscellaneous investment income	2,460	2,536	2,600	2,724	2,580	2,952	2,932
Accrued net income of farm operators from farm production[2]	1,492	1,304	1,496	1,592	1,471	1,544	1,600
Net income of non-farm unincorporated business including rents[3]	4,040	4,188	4,288	4,356	4,218	4,316	4,236
Inventory valuation adjustment[4]	− 296	− 184	− 296	− 492	− 317	− 596	− 780
Net national income at factor cost	**51,368**	**52,912**	**54,424**	**56,780**	**53,871**	**57,860**	**58,888**
Indirect taxes less subsidies	9,520	9,488	9,628	10,072	9,677	10,500	10,492
Capital consumption allowances and miscellaneous valuation adjustments	8,444	8,420	8,484	8,448	8,449	8,840	8,548
Residual error of estimate	− 252	− 528	− 616	− 776	− 543	− 624	− 652
Gross National product at market prices	**69,080**	**70,292**	**71,920**	**74,524**	**71,454**	**76,576**	**77,276**
(Gross national product at market prices excluding accrued net income of farm operators)	(67,588)	(68,988)	(70,424)	(72,932)	(69,983)	(75,032)	(75,676)

[1] Includes the withholding tax applicable to this item.

[2] Includes an arbitrary smoothing of crop production and standard seasonal adjustments for withdrawals of grain from farm stocks and the change in live-ock items. Because of the arbitrary elements, too precise an interpretation should not be given the seasonally adjusted figures of accrued net income of farm erators.

[3] Includes net income of independent professional practitioners.

[4] See footnote 1, Table B.

TABLE B. Gross National Expenditure, by Quarters, 1968 and 1969

		1968					1969	
		I	II	III	IV	Year	I	II
		Not adjusted for seasonality						
		millions of dollars						
1	Personal expenditure on consumer goods and services	9,802	10,404	10,353	11,801	42,360	10,748	11,
2	Government current expenditure on goods and services	2,994	2,857	3,034	3,193	12,078	3,401	3,

19	**Gross national expenditure at market price**	**69,080**	**70,292**	**71,920**	**74,524**	**71,454**	**76,576**	**77,2**

---

[1] The book value of inventories is deflated to remove the effect of price changes and the derives "physical" change is then valued at average prices the current period to obtain the value of physical change. The difference between this value of physical change and the change in book value is called the i ventory valuation adjustment. (See line 8, Table A.)

[2] Revised figures not incorporated into the Accounts as shown in the "Quarterly Estimates of the Canadian Balance of Payments, Second Quarter, 1969 DBS Catalogue No. 67-001, are for 1968:

Exports	3,586	4,290	4,443	4,388	16,707
Imports	3,829	4,348	4,149	4,625	16,951

[3] In the seasonally adjusted series, the value of grain production in each quarter is taken as one-fourth of the estimated value of crop production for t year as a whole. All other items in the farm inventories series are seasonally adjusted by standard techniques.

[4] Revised figures not incorporated into the Accounts as shown in the "Quarterly Estimates of the Canadian Balance of Payments, Second Quarter, 1969 DBS Catalogue No. 67-001, are for 1968:

Exports	16,128	16,648	16,576	17,476	16,707
Imports	16,580	16,360	16,968	17,896	16,951

TABLE C. Gross National Expenditure in Constant (1961), Dollars, by Quarters, 1968 and 1969[1]

15	Farm and grain in commercial channels	88	- 88	32	396	107	296	1,004
16	Exports of goods and services[2]	14,016	14,472	14,396	15,056	14,485	15,708	15,212
17	Deduct: Imports of goods and services[3]	- 14,744	- 14,552	- 15,004	- 15,612	- 14,978	- 16,492	- 16,320
18	Residual error of estimate	212	432	500	624	442	500	512
19	**Gross national expenditure in constant (1961) dollars**	**56,832**	**57,424**	**58,172**	**59,736**	**58,041**	**60,820**	**60,704**

[1] The implicit price deflators of the seasonally unadjusted components of Gross National Expenditure, derived by dividing the value figures in current dol-ars by the constant dollar figures, are not suitable as indicators of quarter-to-quarter prior change. This is because they are currently weighted and therefore re affected by compositional shifts which occur within unadjusted components of Gross National Expenditure, on a quarter-to-quarter basis. Quarter-to-quarter omparisons based on seasonally adjusted data are less subject to the problem of shifting weights and may be used as a measure of price change.

[2] Revised figures not incorporated into the Accounts as shown in the "Quarterly Estimates of the Canadian Balance of Payments, Second Quarter, 1969" BS Catalogue No. 67-001, are for 1968:

Exports	3,129	3,727	3,810	3,829	14,495
Imports	3,380	3,834	3,639	4,082	14,935

[3] Revised figures not incorporated into the Accounts as shown in the "Quarterly Estimates of the Canadian Balance of Payments, Second Quarter, 1969" BS Catalogue No. 67-001, are for 1968:

Exports	14,024	14,436	14,376	15,144	14,495
Imports	14,684	14,440	14,960	15,656	14,935

Canadian Statistical Review Supplements

04 *Weekly Supplement to the Canadian Statistical Review*—Free to *Canadian Statistical Review* subscribers.

Contains figures produced by the DBS and other agencies which are released during the week of issue. The data will, of course, appear in the following issue of the *Canadian Statistical Review*. Designed to keep users of the *Review* closely informed of the most recent changes in the major statistical series.

06 *Annual Supplement to the Canadian Statistical Review*—Price $1. (Free to *Canadian Statistical Review* subscribers).

Contains monthly and quarterly historical records, adjusted and not adjusted for seasonality, of all the series in the "S" section of the *Canadian Statistical Review*. The series extend back to 1946 or as far back as the data are available.

Other Statistical Publications

03 *Historical Monthly Statistics* (Occasional)—Price $1.50 (Released January 1964).

Contains monthly statistics extending into the inter-war period or longer for 33 selected series in the fields of prices, industrial production, industrial employment, external trade, retail trade, railway transportation, finance, and commercial failures. For all fields except prices the data include original unadjusted series and their corresponding seasonally adjusted series and seasonal indexes.

CANSIM Manuals and other Publications

· *CANSIM: An Introduction to the Canadian Socio-economic Information Management System*—Free.

30 *CANSIM: Operational Manual for Data Entry* (Occasional)—Price $1.

This manual will be of practical interest only to federal government agencies which store and maintain time series in the CANSIM data base. Users desiring a fuller knowledge of the codes used and the storage methodology will find this volume a useful companion to the "Retrieval Manual".

Catalogue
number Title and Description

CANSIM Manuals and other Publications (Cont'd)

12–531 *CANSIM: Users' Manual for Data Retrieval and Manipulation* (Occasional)—Price $1.50

Gives detailed instructions on procedures for obtaining data on magnetic tape from the CANSIM data base. The initial very rudimentary retrieval package described will be enlarged and improved; the manual will be expanded and modified accordingly. Existing "commands" will, however, continue to be supported.

— *CANSIM: Summary Reference Index*—Free on request.

This index represents a key to the contents of CANSIM, the CANSIM Socio-economic Information Management System, and is the first step in location and ordering time series from the system.

— *CANSIM Matrix Directory*—Free on request.

This directory lists in numerical order all matrices (roughly equivalent to a table) stored in CANSIM. Here the user finds for each matrix a title which gives a general description of the series included, the data source and, in some cases, a matrix note providing additional information of importance.

— *CANSIM Series Directory*—(Order by matrix number. Purchaser pays nominal charge to cover the cost of reproduction).

This directory contains titles and other descriptive detail for all series in the matrix. It is used in conjunction with the *CANSIM Manual for Data Retrieval and Manipulation* (12–531) to order series from DBS. May be ordered for specified matrix numbers.

This Review, the above and other publications of the Dominion Bureau of Statistics, including a free annotated catalogue of current publications, may be ordered from Publications Distribution, Dominion Bureau of Statistics, Ottawa, Ont., or from the Queen's Printer, Ottawa, Canada, and remittances made payable to the Receiver General of Canada. For further information direct inquiries to:

General Time Series Staff,

Reprints and Publications

Reprints of articles and technical notes are available free on request to the General Time Series Staff, DBS.

A list of other publications available appears on the inside back cover.

About the Tables

Changes occur from time to time which affect time series published in this Review. For all series included, historical data are included in CANSIM (Canadian Socio-economic Information Management System), which is the DBS computerized time series data bank, and are revised and updated immediately information becomes available. In instances where the continuity of a series is seriously affected by changes such as in the Standard Industrial Classification, CANSIM contains both the unrevised historical data (as a closed file), and the new revised series with its shorter history.

Changes in this Issue

There are no major changes to tables in this issue.

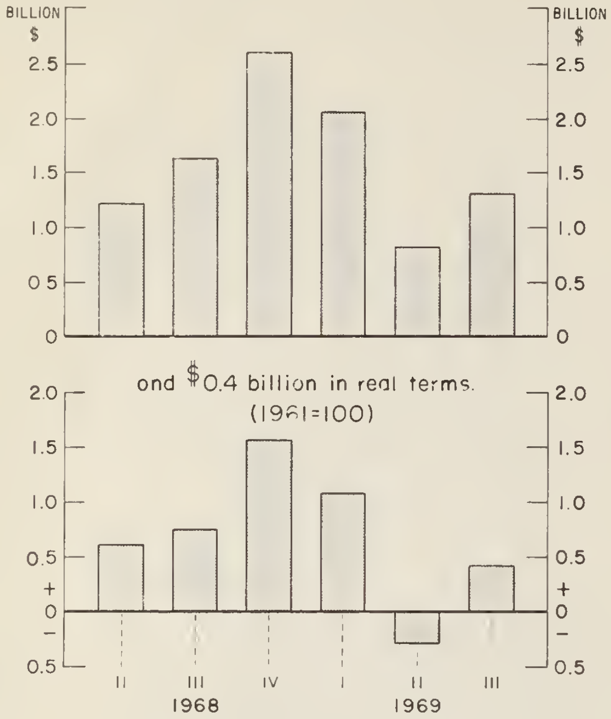
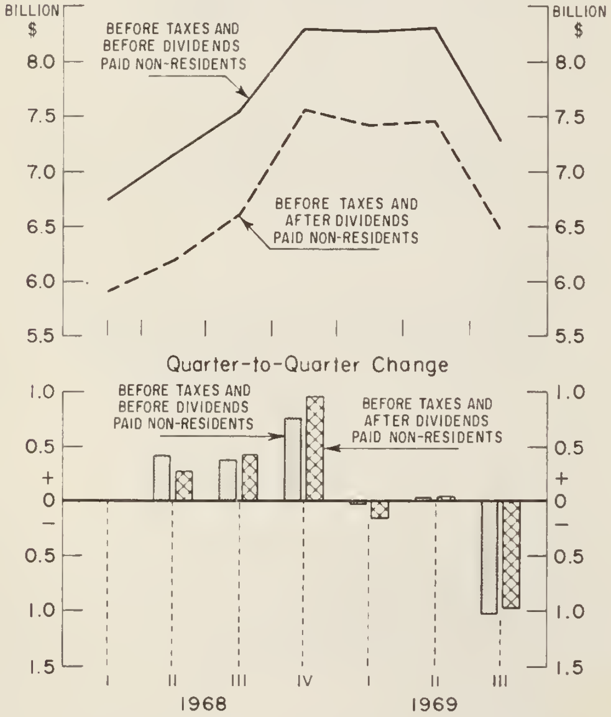
These tables include both original and seasonally adjusted data.

G.N.P. in the third quarter rose $1.3 billion in current prices



and $0.4 billion in real terms. (1961=100)

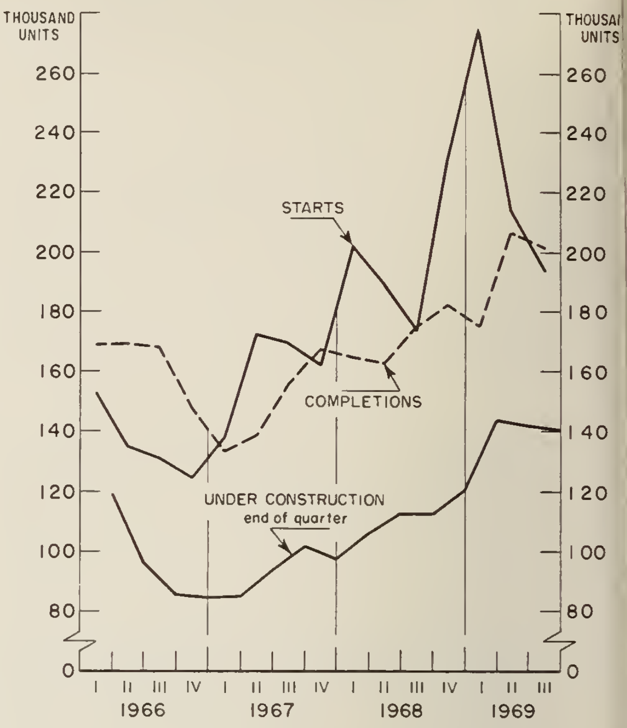
Corporation profits dropped almost 12½ per cent in the third quarter.



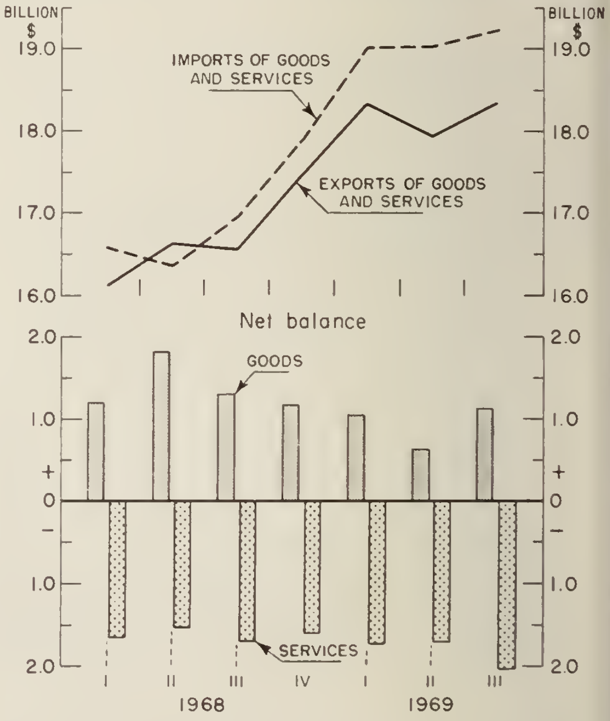
Quarter-to-Quarter Change

ALL DATA SEASONALLY ADJUSTED, AT ANNUAL RATES

Investment in new housing dropped 1.4 per cent in the third quarter reflecting a fall in starts, completions, and units under construction.



A larger surplus in the merchandise account more than offset a larger deficit in non-merchandise, and narrowed the deficit in goods and services transactions with non-residents.



Net balance

NATIONAL INCOME AND EXPENDITURE ACCOUNTS
THIRD QUARTER,[1] 1969

In the summer quarter of 1969, Gross National Product rose by 1.7 per cent to reach a level of $78.7 billion, seasonally adjusted at annual rates. This was above the advance of 1.1 per cent in the second quarter but lower than the average gain of 2.2 per cent realized since the first quarter of 1968. After allowing for a price increase of 1.0 per cent, constant dollar GNP rose by 0.7 per cent.[2]

The third quarter was characterized by strong investment demand by businesses, increased exports, and a lower than average rate of increase in consumer demand. Although new residential construction declined after unusually high rates of increase in the first half of the year, spending on plant and equipment rose by 5 per cent. This increase, the largest since the first quarter of 1968, was fairly evenly distributed between non-residential construction, up 4 per cent, and machinery and equipment, up 5½ per cent. Personal expenditure on goods and services rose by 1½ per cent, the same rate as last quarter. This compares with increases of 2 per cent and over in prior quarters. The continued easing of demand pressure in consumer markets occurred despite an 8 per cent rise in new car sales, reflecting the earlier introduction of new models this year.

The 2 per cent increase in external demand was due to higher sales on merchandise account, which rose by 3½ per cent and were centered in motor vehicles and parts and in newsprint. Imports of goods and services rose 1 per cent. As a net result of these transactions, the deficit, on a National Accounts basis narrowed from $1,080 million to $884 million.

Governments continued to exert a moderating influence on demand with a 2 per cent increase in current expenditure on goods and services and a 4 per cent drop in capital formation. The increase in goods and services was entirely accounted for by a retroactive pay raise in the Federal Government of approximately $240 million at annual rates.

Looked at from the point of view of income flows, the summer quarter also showed uneven developments. The major component, wages and salaries, rose by 2½ per cent. If the non-recurring retroactive payments to Federal Government employees are excluded, the gain is reduced to 2 per cent, indicating a marked deceleration from the gains of 3 per cent and over in the preceding three quarters. However, the most notable development on the income side was a drop of 12½ per cent in corporation profits. This decline was in part attributable to the large number of industrial disputes which were again a feature of the quarter. (Compared with the third quarter of 1968, corporation profits showed a drop of 2 per cent.) Other income components showed mixed movements but in the aggregate rose appreciably.

Price Movements

In the third quarter, the implicit price index of gross national expenditure rose by 1.0 per cent, a lower rate of increase than in the previous quarter. A slight decline in the price of exports and lower rates of increases in the prices of most other components accounted for this movement. The only exception to this was the price index of government expenditure on goods and services which rose by 3.5 per cent largely because of the retroactive payments to Federal Government employees.

---

[1] This article is based on data arising from historical revision of the National Income and Expenditure Accounts. Data consistent with previously published series are available on request from the National Income and Expenditure Division, DBS.

[2] Real Domestic Product at factor cost by industry of origin, an alternative but conceptually somewhat different measure of economic production, shows no change in real terms for the third quarter. Among the conceptual differences between the two series are market price valuation versus factor cost and the use of national versus domestic boundaries. At times there may also be statistical differences in the timing and the weight of the impact of temporary dislocations in the economy, such as strikes, and in the transitional use of different weight-base periods.

Within personal expenditure on consumer goods and services, the slow-down in prices was widespread. Food prices which rose 1.9 per cent in the preceding quarter increased by 0.7 per cent; increases in the prices of fresh fruits and vegetables, poultry, pork, other meat and dairy products were partially offset by declines in those of beef, eggs and bakery products. Among other non-durable goods, prices of fuel, women's and children's clothing and tobacco products rose by 1.5, 1.4 and 1.3 per cent repectively; those of electricity, domestic gas and alcoholic beverages remained unchanged.

Prices of durable goods increased marginally by 0.1 per cent as against 0.3 per cent in the second quarter. Increases were registered in the prices of home furnishings and miscellaneous durables. The price indexes of new automobiles and household appliances and radios declined.

The rise of 1.2 per cent in services, although the strongest among the components of consumer expenditure, was lower than the 1.6 per cent increase of the second quarter. Advances were recorded in recreation, rents and personal services. Purchased transportation price index declined after a sharp increase in the previous quarter, while communication remained unchanged.

Within business gross fixed capital formation, the softening of the price index of residential construction was primarily the result of a decline in the price index of lumber products, while in non-residential construction the advance in price was mainly attributable to increases in wages rates.

The fall in export price index was due not only to pure price changes but also to a pronounced shift in weight. The relative importance of motor vehicle exports increased sharply from about 16 per cent in the second to 25 per cent in the third quarter. Export prices as measured by fixed-weight index advanced 0.5 per cent.

The Components of Demand

Personal Expenditure on Consumer Goods and Services

Personal expenditure on goods and services reached a level of $46.5 billion, an increase of 1½ per cent from the previous quarter.

After having shown two consecutive decreases, passenger car sales increased by nearly 8 per cent. The increase was concentrated in new North American passenger cars which rose by over 8 per cent reflecting the early introduction of new models. New overseas cars as well as used cars also contributed to the overall increase. Purchased transportation, fuel, electricity and gas; shelter and alcoholic beverages also showed increase. Expenditure on clothing and footwear declined by 5 per cent, the first decline since the second quarter of 1968. Men's and boy's clothing showed the greatest decline, over 7 per cent.

Gross Fixed Capital Formation

Spending on gross fixed capital formation rose 2 per cent in the third quarter, reaching an annual adjusted rate of $17.9 billion. While government capital spending dropped by 4 per cent to a level of $3.1 billion, business spending advanced 3½ per cent to a level of $14.8 billion.

Business residential investment declined about 1½ per cent to an annual rate of $4.2 billion, while new plant and equipment investment climbed about 5 per cent to a level of $10.6 billion.

The slackening in current residential investment follows the drop in housing starts observed this year. From a record first quarter seasonally adjusted annual rate of 275,000 units, starts fell to 214,000 and then to 194,000 units in the next two quarters. Completions dropped from 206,000 in the second quarter to 201,000 in the third. Units under construction at the end of September totalled 140,000, down from a rate of 142,000 at the end of June.

The expansion in business non-residential construction was concentrated in building rather than in engineering construction. The high level of non-farm machinery and equipment investment was largely met from foreign sources. Demand for agricultural machinery and equipment continued to be weak.

Non-farm Business Inventories

Stocks of non-farm business inventories in the third quarter of 1969 showed an investment of $120 million, seasonally adjusted at annual rates. The accumulation of stocks of manufacturers and retailers was to a great extent offset by a liquidation in the stocks of wholesale dealers and "others".

In manufacturing, at the total level, the build-up was almost equally distributed between durable and non-durable goods producing industries. While the rate of accumulation in durables dropped from the previous quarter, stocks of manufacturers of non-durable goods shifted from a substantial liquidation in the second quarter to a sizeable accumulation in the third. Additions to stocks took place at all stages of production, the highest being in the stocks of finished products.

In the distribution trades, stocks of wholesale dealers were reduced in the present quarter. The major part of this liquidation took place in durable lines. Stocks of retail trade showed a moderate accumulation as a result of strong counter balancing movements. Within durable lines, an accelerated rate of increase in the stocks of motor vehicle dealers, was somewhat offset by a liquidation in the stocks of other durable goods. Stocks of all the non-durable goods, with the exception of food, decreased.

Totals	**8**	**120**

Exports and Imports of Goods and Services

With exports of goods and services higher by $400 million, and imports by $204 million, the balance on current account, on a National Accounts basis, narrowed from a deficit of $1,080 million at annual rates to a deficit of $884 million. The merchandise surplus increased from $624 to $1,136 million, while the non-merchandise deficit widened from $1,704 to $2,020 million.

Merchandise exports rose over 3½ per cent from the second quarter level with sharply increased sales of motor vehicles and parts, and newsprint. Merchandise imports were virtually unchanged.

The higher deficit on non-merchandise trade resulted from increased payments on tourist and travel transactions, and lower interest and dividend receipts.

[2] Includes withholding tax. Excludes inheritances and emigrants' funds, personal and institutional remittances, official contributions, and pension payments.

The Components of Income

Labour Income

During the third quarter, labour income increased by over 2½ per cent. This was slightly less than the gains recorded during the last three quarters. Wages and salaries in the service-producing industries advanced by about 3½ per cent while those in the goods-producing industries, which were seriously affected by labour disputes, increased by just over 1 per cent. Among the goods-producing industries, construction increased by almost 5 per cent mainly because of the impact of labour disputes on the second quarter. Manufacturing increased by almost 1 per cent despite major strikes in August and September. Mining was also seriously affected by strikes and declined by almost 5 per cent.

SEASONAL ADJUSTMENT

A number of important economic time series are presented in unadjusted and seasonally adjusted form in the Canadian Statistical Review. Seasonally adjusted data are most useful for analysis and forecasting as they bring out the underlying trends of economic time series. Seasonal adjustments remove the effect of repetitive intra-year variations resulting from normal differences in weather, holidays with invariable dates, or other events which repeat with the same timing. Additional adjustments may be necessary for series which contain variation due to the difference in working or trading-days in each month or for holidays or other events with variable dates. Such adjustments are made prior to the seasonal adjustment but are treated as part of the seasonal adjustment.

The seasonal adjustment method applied to economic time series at the Dominion Bureau of Statistics is a computerized ratio-to-moving average method. The standard computer program used in the Bureau is the US Bureau of the Census Method II. The X-9 version is used for Labour Force data; for other data adjusted by computer the X-11 version is used.

MCD — MONTHS FOR CYCLICAL DOMINANCE

In seasonally adjusted series, month-to-month changes are often dominated by irregular movements, which may obscure the underlying trend-cycle. The MCD (months for cyclical dominance) in a table containing seasonally adjusted series indicates the smallest span of months for which the average change in the cyclical factor is greater than that in the irregular factor. For the smoothest series the MCD is 1, for the most erratic series it is 6. Applying moving average of the period equal to the MCD tends to smooth the series. The smoothed series will show the cyclical movements as clearly as series with an MCD of 1.

SMOOTHING OF SEASONALLY ADJUSTED SERIES

Smoothed data have been used for the graphs of some of the seasonally adjusted series with MCD of 4, 5 or 6. A 5-term moving average was applied for smoothing these series.

ABOUR FORCE (More detail in Table 19)

THE TOTAL LABOUR FORCE INCREASED IN OCTOBER, WHILE EMPLOYMENT WAS VIRTUALLY UNCHANGED. UNEMPLOYMENT OVED UP FOR THE THIRD CONSECUTIVE MONTH.

---

[1] The occupational status of the majority of the persons destined to the labour force is determined by immigration officials by an examination of documentary evidence provided by the immigrants. The classification of occupations is similar to that used in the 1961 Census; see Occupational Classification Manual, Census of Canada, 1961, Catalogue Number 12-506. [2] Includes logging, fishing, trapping and hunting. [3] Includes mechanical and construction. [4] Includes a small number in non-specified occupations. [5] Does not include students entering Canada on students' visas. [6] Includes also retired persons, elderly dependents, fiancés or fiancées and other unspecified persons not intending to enter the labour force. **Source: Quarterly Bulletin, Department of Manpower and Immigration.**

---

[1] Includes change in farm inventories. The seasonally adjusted data include an arbitrary smoothing of crop production, standard seasonal adjustments for withdrawals of grain from farm stocks and the change in livestock items. Because of arbitrary elements, too precise an interpretation should not be given to the series. [2] Includes residual error of estimate. **[3] Revised data arising from the historical revision of the National Income and Expenditure Accounts are presented on pages 106-108 of this issue. Source: at bottom of Table 14.**

---

[1] Excludes inmates of institutions, members of the armed services, Indians living on reserves and residents of the Yukon and Northwest Territories. The estimates are derived from a sample survey and are subject to sampling error. In general, the smaller the estimate, the larger is the relative sampling error. [2] The labour force as a percentage of the population 14 years of age and over. [3] The unemployed as a percentage of the labour force. **Source: Labour Force Bulletin, (71-001), D.B.S.**

[1] See footnote 1, table 19. Labour force obtained as the sum of employed and unemployed from tables 21 and 23. [2] Canada totals, obtained by summing the seasonally adjusted data for the five regions, are usually different from the totals given on page S-1. The small differences result from the seasonal adjustment of the Canada and regional data having been carried out independently of each other. **Source: The Labour Force, (71-001) D. B. S.**

---

[1] In calculating time loss, only the workers directly affected by the strike or lockout are taken into account; time lost by workers indirectly affected, such as those laid off as a result of a work stoppage is not included. [2] The statistics for individual industries exclude strikes and lockouts involving fewer than 100 workers; the total, however, includes all work stoppages. The agricultural, finance, insurance and real estate and public administration and defence industries are not shown separately; should strikes occur in these industries, they also will be shown in the total. [3] Includes miscellaneous manufacturing industries. [4] Includes also publishing and allied industries. [5] Includes also the storage and communication industries. Source: Labour Gazette, Department of Labour.

[1] The data in Tables 28 to 35 are based on reports from firms employing 20 persons or more in any month of the year and relate to the last pay periods in the month. Greater industrial and area detail and more explanatory notes are given in the source publication named below. [2] Excludes agriculture, fishing, trapping and public administration and defence. [3] Includes storage, electric power, gas and water utilities. [4] Excludes domestic service. **Source: Employment and Average Weekly Wages and Salaries, (72-002), D.B.S.**

[1] See footnote 1 and source in Table 28. [2] Employment indexes in total manufacturing and in its total durable and non-durable components are given in Table 28. [3] In addition to those listed, tobacco products; knitting mills; printing, publishing and allied; and miscellaneous manufacturing industries are included in non-durable manufacturing. [4] Except machinery and transportation equipment industries.

[1] The data for the current year are subject to revision. [2] Includes gold. [3] Consists of general wholesale index less animal products and vegetable products component groups. [4] Consists of iron products and non-ferrous metals products component groups less gold. [5] These two series comprise the general wholesale index. [6] Excludes gold. **Source: Prices and Price Indexes (62-002), D. B. S.**

[1] Total commodities and services does not add up to 100 per cent; the portion of shelter which includes taxes and mortgage interest, and amounts to 8 per cent, is excluded. [2] These indexes measure **within each city** the percentage change in consumer prices from the base period to the subsequent time periods. **They cannot be used to compare levels of prices between cities. Information on inter-city retail price differentials is contained in technical note No 6 published in the June 1969 issue of the Canadian statistical review.** **Source: Prices and Price Indexes (62-002), D. B. S.**

---

[1] Monthly shipments represent an estimated projection of the latest available Census of Manufacturers values except for those industries whose long-term contracts result in large intermittent shipments; for these a monthly estimate of work put in place has been substituted. [2] Total manufacturing inventory owned by manufacturers including warehouse stacks. [3] Total new orders received during the period at estimated selling value, net of cancellations, regardless of whether the orders will be filled from stock or as a result of activity during the same month. [4] Annual figures for inventories and unfilled orders are end of December values.

Source: Inventories, Shipments and Orders in Manufacturing Industries (31-001), D.B.S.

Table 41: manufacturing shipments[1] by industry based on the 1960 standard industrial classification (million dollars)

monthly averages or months		total shipments	non-durables	durables	foods and beverages	tobacco products	rubber	leather	textile	knitting mills	clothing	wood

[1] Monthly shipments represent an estimated projection of the latest available Census of Manufacturer's values except for those industries whose long term contracts result in large intermittent shipments; for these a monthly estimate of work put in place has been estimated. **Source: Inventories, Shipments and Orders in Manufacturing Industries (31-001), D.B.S.**

Source: Inventories, Shipments and Orders in Manufacturing Industries (31-001), D. B. S.

Table 45: estimated value of goods in process and finished products in manufacturing industries, by economic use classification, based on the 1960 standard industrial classification (million dollars)

end of period	inventories held													
	goods in process							finished products						
	consumer goods		machinery and equipment	construction materials and components	other intermediate goods and supplies	export-based industries	supplementary classification: automotive products	consumer goods		machinery and equipment	construction materials and components	other intermediate goods and supplies	export-based industries	supplementary classification: automotive products

[1] Starting with January 1968, production is manufacturers' production; prior to that date production was indicated by the use of excise duty stamps. [2] Intended for cigarettes. [3] Includes sales to wholesalers or retailers. [4] Subject to Excise Tax. [5] Includes sales for ships' stores and for export. [6] End of period. [7] Includes smoking, chewing and twist. **Sources: Tobacco and Tobacco Products Statistics Quarterly (32-014), D. B. S.; and Department of National Revenue.**

---

[1] Prior to January 1969 shoe classifications were different from those now in use. The change was undertaken in order to eliminate ambiguity. The discontinuity is virtually insignificant except perhaps in two classifications. i.e. girls' under size 4 and infants' and "little children's". **Source: Footwear Statistics (33-002), D.B.S.**

---

[1] Prior to 1964 data are not entirely comparable since they are on a production basis. [2] Includes slims and stretch pants. [3] Made from woven fabrics: shorts. [4] Starting with first quarter of 1968, "women's and Misses' category" becomes "Women's, Misses' and Juniors'". Data are not changed. **Source: Garment Shipments (34-001), D. B. S.**

---

[1] Total pulp production covers "screenings" which are already included in exports. "Screenings" are excluded throughout from mechanical and chemical pulp. [2] 100 cu. ft. of solid wood; pulpwood produced for domestic use and excluding exports, but including receipts of purchased roundwood. [3] Customs exports. [4] Mill shipments destined for export. **Sources: Pulpwood and Wood Residue Statistics (25-001), Trade of Canada, Exports (65-004), D.B.S; Bulletins of Canadian Pulp and Paper Association and Newsprint Association of Canada.**

[1] Data compiled according to the Steel Distribution Index revised January, 1964. Figures on net shipments relate to rolled steels products only. Shipments to consuming industries of castings, forgings and steel pipe are not included. [2] Includes building contractors, public and utility construction, structural steel fabricators, national defence and public works and utilities. [3] Includes appliances and utensils. Note: Some groupings are not entirely comparable to year 1964 due to change in classifications but in general the differences are minimal. [4] Excluding shipments for re-processing at maker's own plant. [5] Data on shipments of steel shapes to consuming industries are being withheld pending settlement of strikes in this industry. **Source: Primary Iron and Steel (41-001), D. B. S.**

---

[1] Production plus imports less re-exports. [2] Commencing January 1967, the value of new motor vehicles sold in Canada (as reported by manufacturers and distributors) was based on "actual cost to purchaser" rather than the suggested list price as in the past. **Sources: Motor Vehicle Shipments (42-002), New Motor Vehicle Sales (63-007), Trade of Canada, Imports (65-007), Exports (65-004), and Credit Statistics (61-004) D.B.S.**

[1] Includes record players. [2] Includes producers' shipments for export. [3] Includes portables. [4] Radio phonograph combinations. [5] Includes monoural and stereo with and without amplifiers. [6] Excludes producers' shipments for export. [7] Included with "total television receivers". [8] Customs clearance; radio sets include all types; television sets include colour and black and white. **Sources: Radio and Television Receiving Sets (43-004); Trade of Canada, Imports (65-007), D.B.S.**

Note: Components may not add to totals due to rounding. Current figures in this table are preliminary and therefore subject to revision. [1] Includes crude oil, condensate and pentanes plus. [2] Deliveries to refineries and exports do not add to total new supply due to losses, other uses and inventory changes. [3] Gross new production by field less field flared and waste. [4] By gas utilities. Sources: **Crude Petroleum and Natural Gas Production (26-006), Refined Petroleum Products (45-004), Gas Utilities (55-002), D. B. S.**

---

[1] Barrels of 35 Canadian gallons. [2] Includes domestic and imported crude oil, condensate and pentanes plus received by Canadian refineries. [3] Refinery production (from crude oil, condensate and pentanes plus, and commingled propane/butane mixes) plus other materials used. [4] Includes deliveries of butane commingled in the crude stream in Saskatchewan and Alberta. [5] Includes inventories at end of period being held at gas plants and in storage caverns. [6] Includes stove oil, kerosene and tractor fuel. [7] Includes aviation gasoline and aviation turbo fuel. [8] Due to conceptual changes, the stock and sales series are not available on a comparable basis prior to June 1965. Includes propane and propane mixes and butane and butane mixes. [9] Includes petro-chemical feed stocks, naphtha specialties, coke, lubricating oil and grease, still gas and other products. **Source: Refined Petroleum Products (45-004), D. B. S.**

Note: Components may not add to totals due to rounding differences. [1] The data are collected for 1,400 municipalities and individual figures are available on request. [2] Historical data back to 1920 are available in "Historical Monthly Statistics" Catalogue No. 11-503, occasional. Starting with January 1966, the number of municipalities has been reduced to 56 following the annexation of the town of Riverside to the city of Windsor. **Source: Building Permits (64-001), D. B. S.**

---

[1] The coverage was extended to 507 municipalities in 1948, and as of 1965, stands at more than 1,400; minor revisions are still being required in the table, due to the non-receipt of returns from a few small places. No account is taken of the building activity outside of registration areas. Actual operations normally follow the granting of permits but a number of projects are not undertaken or abandoned. The amount depends upon the statement of the applicant and considerable change may develop before the completion of the operation. **Source: Building Permits (64-001), D.B.S.**

---

[1] A dwelling unit is defined as a structurally separate set of living quarters having its own entrance from outside of the building, or from a common passage inside. These data are the result of a nation-wide survey, for which the field work is carried out by the Central Mortgage and Housing Corporation. All metropolitan areas and urban centres with a population of 10,000 or more, along with certain other areas of high building activity, are enumerated completely each month. The remainder of the country is covered on a sample basis quarterly. [2] End of period. **Source: New Residential Construction (64-002), D. B. S.**

[1] Monthly totals are not equivalent to annual data which include Newfoundland and Yukon and Northwest Territories for which only annual statistics are collected. [2] Planks and boards, flooring and square timber. [3] Hollow blocks including fireproofing and load-bearing tile. [4] For building insulation only. [5] Figures cover the production of firms which normally account for 90 per cent of the total for Canada. [6] Factory sales of firms which normally account for 96% of total Canadian production. **Source: Concrete Products (44-002), Products made from Canadian Clays (44-005), Asphalt Roofing (45-001), Rigid Insulating Board (36-002), Iron Castings and Cast Iron Pipes and Fittings (41-004), Steel Wire and Specified Wire Products (41-006), Gypsum Products (44-003), Mineral Wool (44-004), Sales of Paints, Varnishes and Lacquers (46-001), Production, Shipments and Stocks on Hand of Sawmills (35-002), (35-003) monthly, (35-204) annual and Trade of Canada, Imports (65-007), Exports (65-004), D. [1] Cash receipts from farming operations excluding supplementary payments. Excludes Newfoundland. [2] Represents participation payments made by the Canadian Wheat Board direct to producers on crops delivered in previous years. [3] Includes rye, flaxseed, rapeseed, soybeans and corn. [4] Includes clover and grass seed, hay, clover, greenhouse products, mustard seed, sunflower seed, hops, dry beans and dry peas and miscellaneous products. [5] Made under the authority of the Agricultural Stabilization Act. **Source: Farm Cash Receipts (21-001), D. B. S.**

Note: Components may not add to totals due to rounding. [1] The estimates for the current year are subject to revision since the factors used in the blow-up are based on the previous years' operations and may change when the current annual totals for all firms are known the following year. [2] Excluding trucks. [3] The total value of all machines shown in this table is greater than the value shown for farm machinery in Table 87 which covers wholesalers proper only. The above table covers all sales to users and includes sales by manufacturers through their agents as well as the sales of importers and other dealers made directly to users. Even though sales are to users, i.e. farmers, values are stated at wholesale prices, i.e. cost to dealers. **Source: Farm Implement and Equipment Sales (63-009), D.B.S.**

[1] These indexes are available for January, April and August only. [2] Average rates of cash wages paid per month to male hired help on farms. They reflect the average of the wages paid to all male farm help regardless of age and skill. Data are available for January, May and August only. [3] Exclusive of Newfoundland. Western grain prices used in the construction of the Index prior to August 1, 1967 are final prices.From August 1, 1967 to date, the western grain prices used in the Index are initial prices only for wheat, oats and barley. [4] Barley No. 1 feed; hogs grade "B" alive. [5] Price of 100 lbs. good steer as a percentage of the price of 100 lbs. live hog, grade B. Effective January 1969 as a percentage of the price of 110 lbs. live hog. [6] Price of 100 lbs. good steer as a percentage of the price of 100 lbs. good lamb. [7] Quotations refer to steers of all weights. [8] Grade "B" hogs. Effective January 1969 prices based on index 100, hogs. Sources: Price Index Numbers of Commodities and Services Used by Farmers (62-004); Farm Wages in Canada (21-002) Occasional; Coarse Grains Quarterly (22-001); Index Numbers of Farm Prices of Agricultural Products (62-003), D. B. S. and Livestock and Meat Trade Report, Dept. of Agriculture.

[1] Monthly totals for current years are not equivalent to annual data due to receipt of additionnal statistics which cannot be allocated by months. [2] Includes also seaweeds and other species such as whales, worms etc. [3] Exports include sea and freshwater fish and shellfish products but exclude bait, meal, oils, offal, livers, fish roe n.e.s. and fishery foods and feeds n.e.s. [4] Total holdings (all forms) of frozen fish commencing october 1969 excludes freshwater species.

---

[1] Customs exports are adjusted to reflect actual physical movement of wheat flour from Canada. Data shown for the last current year are not so adjusted. [2] Production is calculated as the sum of the current manufacturers' shipments and the net change in manufacturers' inventories from the previous months. [3] Includes stocks held by manufacturers, wholesalers and other warehouses. [4] Includes baking and frying oils and fats. [5] Includes stocks held by manufacturers and other warehouses. [6] Includes beef stews and boiled dinners. [7] Includes fresh sausage, frankfurters, weiners and all other sausage. [8] Includes solid, coated, bulk, packages and novelties. [9] Includes tomato sauce, sauces for meat and fish and sauces, other. **Sources: Grain Milling Statistics (32-003), Oils and Fats (32-006),** Quarterly Reports, **Biscuits and Confectionery (32-016), Fruit and Vegetable Preparations (32-017) and Miscellaneous Food Preparations (32-018), Monthly Production of Soft Drinks (32-001),** Monthly Report, **Meat and Meat Preparations, D. ---

[1] Total value of retail trade seasonally adjusted includes sales of department stores, general merchandise stores, variety stores and all other stores. Due to changes in definition of department stores, the re-classification of some variety store firms and the introduction of general merchandise stores, formerly in all other stores, the unadjusted and seasonally adjusted department store data for 1968 and subsequent years are not comparable with the data of previous years. **Source: Retail Trade (63-005), D. B. S.**

[1] Department store stocks at end of period at selling value. The sales and stocks data are revised series based on the results of the 1961 Census of Merchandising and Service Establishments. [2] Due to changes in definition of department stores and the introduction of general merchandise stores, formerly included in all other stores, the 1968 and 1969 figures are not comparable with the data of previous years. **Source: Department Store Sales and Stocks (63-002). D. B. S.**

*Credit extended mainly to individuals; includes unidentifiable amounts of credit extended for non-consumer purposes; excludes certain forms, mainly service credit extended by doctors, dentists, lawyers, pawnbrokers, travel companies, restaurants and personal credit for which no statistics are available. [1]Conditional sales agreements held in connection with the financing of retail purchases of consumers' goods and repaid in instalments. [2]Companies licensed under the Small Loans Act and affiliated compagnies engaged in making personal loans. [3]Cash loans with no conditional sales contract but usually repaid in instalments. [4]Personal loans other than those fully secured by marketable bonds and stocks and other than home improvement loans. [5]Loans other than secured loans and mortgage loans. [6]Figures for dates other than year-end are estimated on the basis of loans made by sixteen companies. [7]Sum of instalment credit of clothing, hardware and jewellery stores, fuel dealers and "all other trades" in Table 89. [8]Sum of charge accounts of clothing, hardware, independent grocery and combination stores, jewellery and general stores, fuel dealers, garages and filling stations and "all other trades" in Table 89. [9]Amount owing to oil companies ex commercial accounts. [10]Personal loans only. [11]The data for Quebec savings banks loans and motor vehicle dealers are not seasonally adjusted as no seasonality is present; these series are repeated in the unadjusted form. **Sources: Credit Statistics (61-004), D. B. S.; Bank of Canada, Dept. of Insurance, Dept. of Finance and Dept. of Agriculture.**

[1] Monthly averages for 1966 and 1967 may differ from the averages of the monthly data due to revisions which cannot be allocated by months. [2] Data in thi table refer to class 1 and class 2 carriers which are railways with gross annual operating revenues of $500,000 or over. Includes operations of United State railways operating in Canada but excludes operations of Canadian railways in the United States. [3] Includes traffic interchanged between Canadian railways. **Sources: Railway Operating Statistics (52-003) monthly, and (52-206) annual, D.B.S.**

[1] Includes Class I and Class II carriers only. These are trucking firms having $100,000 or more gross annual operating revenues. [2] Includes Class I carriers only. These are carriers having $100,000 or more gross annual revenues primarily from inter-city and rural bus operations. Regular and chartered services are included. [3] Includes Class I carriers only. These are carriers having $100,000 or more gross annual revenues primarily from urban transit operations. Data are totals for motor bus, trolley coach, street car, subway and chartered services. **Sources: Motor Carriers-Freight, Quarterly (53-005), Passenger Bus Statistics (53-002) monthly, and Urban Transit (53-003) monthly, D.B.S.**

[1] Monthly averages for years 1965 and 1966 differ from the averages of the monthly data due to revisions which cannot be allocated by months. [2] Includes scheduled and non-scheduled carriers, groups I to IV. These groups cover all air carriers with gross operating revenues of over $60, 000 annually prior to January, 1964 and over $100, 000 annually since. [3] United States and other foreign carriers having scheduled services into and out of Canada. Excludes passengers in transit through Canada. [4] Cargo includes air freight and express but excludes mail and excess baggage. [5] Data prior to 1964 do not include bulk transportation. Because of survey limitations, data on bulk transportation after January 1, 1964 refer only to aircraft having a minimum authorized take-off weight on wheels in excess of 18, 000 lbs. **Source: Civil Aviation (51-001), D. B. S.**

---

[1] Data from February 1967 onwards for net receipts include gathering and trunk lines. Prior to that date they include trunk lines only. [2] Excludes distribution systems. [3] Received from field and processing plants by transport systems. [4] Starting with 1967, operating revenues of crude oil products are no longer available separately; they are included with the crude oil operating revenues. **Sources: Oil Pipeline Transport (SS-001) and Gas Utilities (SS-002), D.B.S.**

---

[1]The statistics of failures in this table are limited to those bankruptcies filed under Federal legislation (the Bankruptcy and Winding-Up Acts) and does not include failures, sales or seizures carried out under other legislation.The figures for Atlantic provinces may be obtained by subtracting the sum of Quebec, Ontario, Prairie provinces and British Columbia from the total. [2]In the Bankruptcy Act of 1949, provision is made for proposals from insolvent persons. Agreements made under this method are not included with the statistics of bankruptcies. Liabilities of insolvent persons making proposals are not available. **Source: Commercial Failures (61-002) Quarterly, D. B. S.**

[1] Bank of Canada deposits are averages of the juridical days in the month shown while Bank of Canada notes and Canadian dollar deposit liabilities are averges of the 4 consecutive Wednesdays ending with the second last Wednesday in the previous month. [2] Mainly deposits of foreign banks. [3] Capital, rest fund and ndivided profits as at the latest fiscal year-end. [4] Including issues payable in foreign currency. [5] Securities purchased direct from issuer with a term of less than ne year at time of issue are classified as loans. [6] Excluding Canadian day-to-day loans. [7] Loans to grain dealers and exporters. [8] Loans to finance purchase of anada Savings Bonds at time of issue. [9] Total of foreign funds, short term foreign investments and other foreign currency assets less foreign currency liabilities. Including loans to instalment finance companies. **Source: Statistical Summary of Bank of Canada.**

[1] The definition of profits before taxes is based mainly on the accounting definition used by corporations. However, depletion charges are added back to net rofits while Canadian dividends received are excluded from profits in order to avoid duplication. The term "profits" as used here means the total profits of all ompanies earning profits less the losses of all companies incurring losses. Estimates are based on profits as reported by sample of all companies incorporated in anada (excluding government-owned companies). [2] As is evident from the above footnote, the data reporting unit is the company; the data are therefore not entirely omparable with data where the establishment is the reporting unit. [3] Includes also the furniture and furnishings industry. [4] Includes the primary metal, the metal abricating, the machinery and the transportation equipment industries. [5] Includes tobacco products, leather and miscellaneous manufacturing industries. [6] Includes lso storage and communication industries. [7] Includes agriculture, forestry, fishing and construction. **Source: Corporation Profits (61-003), D. B. S.**

[1] The number of stocks included has varied over the period; the totals shown in the column headings represent the current coverage. [2] The headings for "bas metals" and "industrial mines" are not found in the Standard Industrial Classification. [3] Combines the industrials, utilities and finance common stocks. [4] Stocks included in industrial mines are listed on the exchanges as industrials. Their operations include smelting and refining. [5] Includes also the machinery industrie (except electrical machinery) and the transportation equipment industries. [6] Stocks included in the mining index are for producing mines. Sources: Price Movements (62-001), and Prices and Price Indexes (62-002), D.B.S.

Note: The monthly data do not add to the annual totals which include supplementary payments arising from the closing of the accounts. [1]This statemen does not include any disbursements other than regular budgetary expenditures. Excluded, for example, are all government outlays arising from increases in loans advances and investments. [2]Under the Technical and Vocational Training Assistance Act. [3]Government contributions under the Hospital Insurance and Diagnosti Services Act. [4]Includes treatment and rehabilitation services. [5]For comparison purposes, annual figures for 1965-66 and 1966-67 represent "Grants to Universities Payments to the Association of Universities and Colleges of Canada" (col. 6), "Capital Subsidies for the Construction of Commercial and Fishing Vessels" (Col. 8 and "Interim Payments to Railways to Maintain Freight Rates at Reduced Levels" (Col. 22). [7]As of April 1, 1969 Industry and Trade and Commerce are combine

Sources: Canada Gazette and Dept. of Finance.

*March interim (preliminary) data

Among the service-producing industries, wages and salaries advanced by over 8 per cent in public administration, mostly as a result of retroactive payments to Federal Government employees. There were increases of about 4 per cent in service, 3 per cent in transportation, storage and communication, 2 per cent in finance, insurance and real estate, and 1½ per cent in trade.

Corporation Profits

After advancing steadily during 1967 and 1968 and levelling off in the first half of the year, corporation profits declined by 12½ per cent in the third quarter. A year-to-year comparison shows a drop of 2 per cent from the third quarter of 1968. Industrial disputes, mainly in the mining and primary metals industries, rising costs and a slackening of sales revenues were major factors in the third quarter decline. (Due to the speed-up in the release of the quarterly accounts, industrial detail on corporation profits is not available.)

Accrued Net Income of Farm Operators

Accrued net income of farm operators from farm production declined by almost 6 per cent in the third quarter from the second quarter rate. The decrease was due mainly to a drop in the value of livestock production which was partially offset by an increase in cash income from the sale of other farm products, notably dairy products and vegetables.

Net Income of Non-farm Unincorporated Business

Net income of non-farm unincorporated business rose by 2½ per cent in the third quarter. The largest increase occurred in net income from retail trade with smaller and generally offsetting movements in the other industry groups.

Revised National Income and Expenditure Accounts, 1968 and 1969

DBS recently released the summary results of a complete and comprehensive revision of the National Income and Expenditure Accounts. This revision was carried out at the annual level only; a revision of quarterly estimates is now underway and will not be available for some time. During the interim period, 1968 quarterly data previously published have been restructured into the new framework of the accounts and then adjusted arithmetically to the new annual totals; these revised estimates have been linked forward for the first two quarters of 1969. Data are given for the income and expenditure tables only and for GNE in constant (1961) dollars; a full set of tables will be prepared at the time of the fourth quarter.

---

[1] Includes the withholding tax applicable to this item.

[2] Includes an arbitrary smoothing of crop production and standard seasonal adjustments for withdrawals of grain from farm stocks and the change in liv stock items. Because of the arbitrary elements, too precise an interpretation should not be given the seasonally adjusted figures of accrued net income of far operators.

[3] Includes net income of independent professional practitioners.

[4] See footnote 1, Table B.

TABLE B. Gross National Expenditure, by Quarters, 1968 and 1969

Gross national expenditure at market price	**69,080**	**70,292**	**71,920**	**74,524**	**71,454**	**76,608^{r}**	**77,432^{r}**	**78,736**

[1] The book value of inventories is deflated to remove the effect of price changes and the derives "physical" change is then valued at average prices of current period to obtain the value of physical change. The difference between this value of physical change and the change in book value is called the inory valuation adjustment. (See line 8, Table A.)

[2] Revised figures not incorporated into the Accounts as shown in the "Quarterly Estimates of the Canadian Balance of Payments, Second Quarter, 1969" Catalogue No. 67-001, are for 1968:

Exports	3,586	4,290	4,443	4,388	16,707
Imports	3,829	4,348	4,149	4,625	16,951

[3] In the seasonally adjusted series, the value of grain production in each quarter is taken as one-fourth of the estimated value of crop production for the as a whole. All other items in the farm inventories series are seasonally adjusted by standard techniques.

[4] Revised figures not incorporated into the Accounts as shown in the "Quarterly Estimates of the Canadian Balance of Payments, Second Quarter, 1969" Catalogue No. 67-001, are for 1968:

Exports	16,128	16,648	16,576	17,476	16,707
Imports	16,580	16,360	16,968	17,896	16,951

---

[1] The implicit price deflators of the seasonally unadjusted components of Gross National Expenditure, derived by dividing the value figures in current c lars by the constant dollar figures, are not suitable as indicators of quarter-to-quarter prior change. This is because they are currently weighted and theref are affected by compositional shifts which occur within unadjusted components of Gross National Expenditure, on a quarter-to-quarter basis. Quarter-to-quar comparisons based on seasonally adjusted data are less subject to the problem of shifting weights and may be used as a measure of price change.

[2] Revised figures not incorporated into the Accounts as shown in the "Quarterly Estimates of the Canadian Balance of Payments, Second Quarter, 196 DBS Catalogue No. 67-001, are for 1968:

Exports	3,129	3,727	3,810	3,829	14,495
Imports	3,380	3,834	3,639	4,082	14,935

[3] Revised figures not incorporated into the Accounts as shown in the "Quarterly Estimates of the Canadian Balance of Payments, Second Quarter, 196 DBS Catalogue No. 67-001, are for 1968:

Exports	14,024	14,436	14,376	15,144	14,495
Imports	14,684	14,440	14,960	15,656	14,935

REAL DOMESTIC PRODUCT[1]
THIRD QUARTER 1969

The seasonally adjusted RDP index in the third quarter was unchanged from its second quarter level. This is the second consecutive quarter in which this economic indicator has not advanced. A drop in the goods-producing industries offset an increase in the service-producing industries.

Production in the third quarter was strongly affected by strikes—the number of man-days lost established a post-1960 record (man-days lost to strikes and lockouts were also very large in the second quarter). Production losses from labour disturbances in the third quarter were much larger than the production gains from strike settlements.

Mining accounted for almost half of the drop in the goods-producing industries. The commencement of the nickel strikes more than offset a large increase in crude petroleum and natural gas mining, and a slight increase in iron ore mining which occurred because of the termination of strikes in the last month of the quarter. A decrease in manufacturing, because of a downturn in durables, contributed more than a quarter of the change in the goods-producing industries. Within durables manufacturing sharp declines in the strikes-affected iron and steel mills and smelting and refining industries and a slowdown in sawmills more than offset an increase in the manufacturing of motor vehicles. Within non-durables manufacturing the most noteworthy changes were increases in the printing and publishing, and pulp and paper industries. Agriculture[2] also recorded a significant decrease in the third quarter, because of smaller accrued income due to a large drop in Canadian Wheat Board profits (greatly reduced sales of wheat) and decreased production of livestock, and of vegetables and other items. Forestry fell substantially because of a drop in cuttings of timber in B.C.; activity in this province fell from the high levels that occurred in the spring, when there was a combination of short supplies (due to bad weather in the winter) and high levels of demand (shortage of logs in the U.S. Northwest and record U.S. and Canadian construction activity).

Trade contributed more than a third of the increase in the service-producing industries. More than half of the increase in this division came from wholesale trade, which showed fairly widespread increases. In retail trade a large increase in sales of motor vehicle dealers took place. The community, business and personal services and the finance, insurance and real estate divisions each recorded substantial increases. Transportation, storage and communication registered a lesser over-all increase, but one which contained strong upward and downward movements. A substantial recovery in air transport from the strike-affected second quarter and an advance in pipeline transport (reflecting increased exports to the U.S.) more than offset declines in freight transportation by rail and water (both were strongly affected by the iron ore strikes).

---

[1] It should be noted that the movements described here may not always coincide with the constant price gross national expenditure data in the quarterly national income and expenditure accounts, due to conceptual and statistical differences. Among these differences are factor cost versus market price valuation, the use of domestic versus national boundaries, and the use of different weight base periods. At times there may also be statistical differences in the timing and the weight of the impact of temporary dislocations in the economy, such as strikes. It is possible that in this quarter these dislocations may have had a dampening effect on the series used to measure industrial output.

[2] The 1969 crop estimates include the results of the September Forecast of Production of Principal Field Crops.

Real Domestic Product, First Nine Months of 1969

In the first nine months of this year compared to the same period in 1968, RDP rose by 5.1 per cent. This compares with the 1946-68 growth rate of 4.7 per cent and the 1961-68 growth rate of 5.6 per cent. Using growth assumptions in the fourth quarter of 1969 that range from an increase of 2 per cent to a decrease of 1 per cent, the rate of increase for the year 1969 would range from a high of 4.7 per cent to a low of 4.0 per cent. The 1969 growth would thus be of about the same sizes as the increase in 1968 of 4.5 per cent that followed the low growth in Centennial Year of 2.7 per cent.

The goods-producing industries accounted for 60 per cent of the year-over-year change in RDP. The output of both the goods-producing industries and the service-producing industries has been held down by the loss of production due to strikes and lockouts. There has been an increase of over 30 per cent in the number of man-days lost in the first nine months of this year compared to the January-September period in 1968.

Within the goods-producing industries, the increase in the index of manufacturing, unadjusted for seasonal variation, accounted for 60 per cent of the total increase in goods. More of the increase in manufacturing came from the fast-rising durables than from non-durables, despite the effect of strikes in the third quarter. Also within the goods-producing industries, increases in agriculture,[3] construction, and the utilities much more than offset declines in mining, which was severely affected by strikes, and in fishing.

Within the service-producing industries, the community, business and personal services division recorded the largest amount of growth, followed by trade; finance, insurance and real estate; and transportation, storage and communication. The public administration and defence index, however, was lower this year than it was from January to September, 1968.

---

[3] The estimated constant-dollar value of the 1969 grain crops is 17 per cent larger than the value of the 1968 crops.

SURVEY OF PRODUCTION

1. Scope of the Series

The Survey of Production report[1] presented census value added[2] data for the goods-producing industries for Canada, the provinces and territories from 1926 or the earliest year for which data are available until 1967. The output of the service-producing industries is omitted except insofar as the cost of some of these services remains in the census value added of the goods-producing industries.

The basis of valuation is current dollars. The scope of this series is in contrast to that of the annual and quarterly indexes of real domestic product by industry of origin[3] for all goods—and service-producing industries. These indexes of "real output valued in constant dollars" are prepared for Canada only[4] and no regional indexes have been attempted.

The census value added data presented in the report reflect only the main activity of each industry since changes in classification and concept have not been fully implemented in all industries.[5]

In 1967 the total value of production for the goods-producing industries was $29,887,554,000 an increase of 2.8 per cent over 1966. This follows gains of 12.6 per cent, 10.8 per cent, 8.4 per cent and 6.1 per cent for the preceding years and compares with no change in 1967 in real terms for the goods-producing industries. The index of total real domestic product for the economy rose by 2.7 per cent during this period, with the service-producing industries advancing by 5.0 per cent in 1967. Manufacturing and construction increased their share of goods-producing industry "census value added" to 74.1 per cent from 72.9 per cent in 1966. Agriculture declined from 11.3 per cent in 1966 to 9.1 per cent in 1967. Among the provinces, Manitoba, Alberta, British Columbia and Ontario increased their share of total goods production fractionally. At 42.6 per cent, Ontario continued to be the largest contributor.

2. Relation of Census Value Added to the System of National Accounts

In combining value of production data for a number of industries, it is essential, in order to assess accurately the contribution of each industry to the total, that inter-industry duplication be eliminated. The most meaningful definition of production is gross domestic product at factor cost (GDP), since it eliminates inter-industry duplication as well as "indirect tax less subsidy" values.

The value of gross domestic product at factor cost or value added by industry can be measured either directly by summing the factor incomes and capital consumption allowances paid or charged by each industry, or indirectly by subtracting all intermediate goods and services from the revenue (excluding indirect taxes) arising from the production of goods and services in each industry. Both of these methods have been used in preparing a base year weighting system for constant dollar GDP by industry, and in preparing an Input-Output[6] table of the Canadian economy for the same year. The most recent base year is 1961.

Since, at present, data gaps prevent the annual derivation of establishment-based gross domestic product at factor cost by industry, the "census value added" concept will be used in the Survey of Production tables, charts and text until such time as GDP data are available annually.

---

[1] "Survey of Production", DBS Catalogue No. 61-202.

[2] Census value added is obtained by deducting from gross value (exclusive of excise and other sales taxes) of shipments (adjusted for changes in inventory of finished goods and goods-in-process) or accrued operating revenue, the cost of intermediate materials, including custom charges.

[3] "Indexes of Real Domestic Product by Industry (1961 base)", DBS Catalogue No. 61-506. "Indexes of Real Domestic Product by Industry of Origin, 1935-61" DBS Catalogue 61-505. "Index of Industrial Production (1961=100)" DBS Catalogue No. 61-505. Monthly indexes of Industrial Production and quarterly indexes of Real Domestic Product are published in the latter publication.

The term "real" is used in this connection to mean a revaluation of current period quantities at base period prices. The term "domestic" differs from the term "national" as used for national accounting purposes by excluding production in foreign countries accruing to Canadian owners residing in Canada and including all production taking place within the boundaries of Canada regardless of the ownership of the means of production.

[4] At the Canada total level, however, the concepts and data sources are largely the same. Except for internal weighting differences within industry divisions, the two sets of measures are therefore comprable from 1961 forward.

[5] Census value added on an "all activities" basis is shown for mining, manufacturing and forestry, in the Appendix of Catalogue No. 61-202.

[6] The Input-Output Structure of the Canadian Economy, 1961, Volume 1". DBS Catalogue No. 15-501.

In compiling the statistics contained in the Survey of Production the indirect approach to deriving value added is used. The "census value added" residuals for each goods-producing industry, however, are not conceptually equivalent to gross domestic product originating in these industries since they still contain miscellaneous indirect taxes such as licences and property taxes as well as the cost of such services as insurance, advertising, communications, etc., which originate in the service-producing industries. For instance, while the cost of insurance incurred by manufacturers is included in the "census value added" of the manufacturing industry as herein presented, it would not be included in the contribution of manufacturing to total GDP at factor cost.

The data necessary to make the deduction of these business service costs from "census value added" to arrive at a true figure of GDP for each industry and province have not been collected.[7] Available data, however, indicate that these costs constitute a smaller share of "census value added" (as herein compiled) for such industries as agriculture than for manufacturing and construction. The contribution to total GDP of the primary industries and of those provinces whose economies are largely dominated by the primary industries is thus proportionately greater than the data contained in this report indicate.

Thus the measurement of the value of output based on the "census value added" concept, although mostly net of intermediate input within the field now covered by this report, contains some duplication if it is used as an approximation of the gross domestic product originating and for this reason differs from the GDP originating in the weight-base year used in deriving constant dollars by industry.

The industry "census value added" figures also differ from the GDP by industry figures published in the latest Income and Expenditure Accounts reference document and annual bulletins. There are several reasons for differences between the two sets of measurement. The first is due to the difference in concept between "census value added" and GDP as explained above. Another major difference is in the basic reporting units underlying the estimates. The "census value added" data employ the "establishment"[8] as the basic unit for collection and tabulation of statistics by industry. A classification problem, however, is present in the published Income and Expenditure Accounts current value GDP by industry estimates. Data for three factor shares, viz., net income of unincorporated business, investment income, and capital consumption allowances and miscellaneous valuation adjustments are collected and tabulated on a "company" basis while data for the other factor shares, viz., wages, salaries and supplementary labour income and the inventory valuation adjustment are on an "establishment" basis. Thus no direct comparison is possible between the two sets of data. Only as a result of continuing research on enterprise—company-establishment relationships, may it eventually be feasible to reclassify the data which are on one basis (e.g. the company or the enterprise) to correspond to the units used on another (the establishment basis).

---

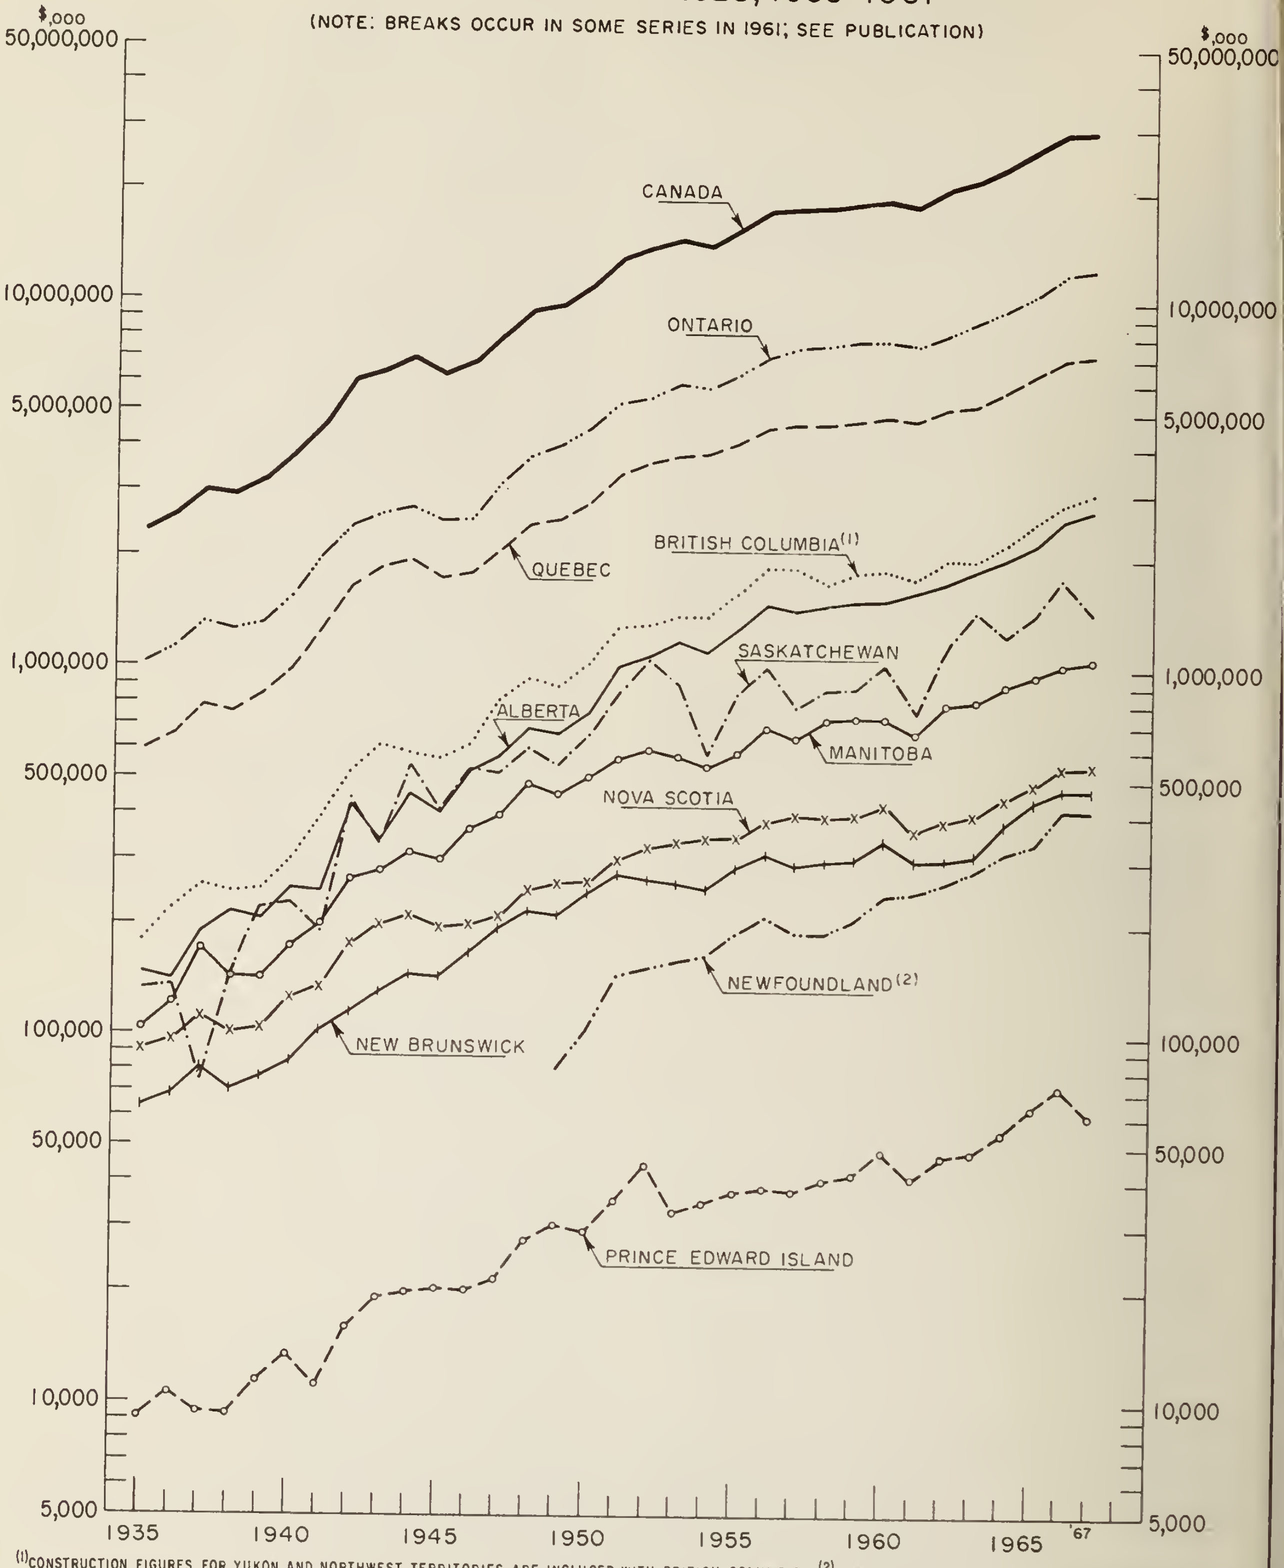
[7] A sample survey of intermediate service inputs, was taken by the Input-Output staff, covering the year 1963 for selected industries.

[8] The "establishment" is defined in the 1960 S.I.C. manual (DBS Catalogue No. 12-501) as the smallest operating entity capable of reporting all principal statistics.

CHART – I

CENSUS VALUE ADDED IN GOODS-PRODUCING INDUSTRIES, CANADA AND PROVINCES, 1935–1967

(NOTE: BREAKS OCCUR IN SOME SERIES IN 1961; SEE PUBLICATION)



(1) CONSTRUCTION FIGURES FOR YUKON AND NORTHWEST TERRITORIES ARE INCLUDED WITH BRITISH COLUMBIA. (2) NEWFOUNDLAND DATA EXCLUDE AGRICULTURE.

r Title and Description

Canadian Statistical Review Supplements

4 *Weekly Supplement to the Canadian Statistical Review*—Free to *Canadian Statistical Review* subscribers.

Contains figures produced by the DBS and other agencies which are released during the week of issue. The data will, of course, appear in the following issue of the *Canadian Statistical Review*. Designed to keep users of the *Review* closely informed of the most recent changes in the major statistical series.

6 *Annual Supplement to the Canadian Statistical Review*—Price $1. (Free to *Canadian Statistical Review* subscribers).

Contains monthly and quarterly historical records, adjusted and not adjusted for seasonality, of all the series in the "S" section of the *Canadian Statistical Review*. The series extend back to 1946 or as far back as the data are available.

Other Statistical Publications

)3 *Historical Monthly Statistics* (Occasional)—Price $1.50 (Released January 1964).

Contains monthly statistics extending into the inter-war period or longer for 33 selected series in the fields of prices, industrial production, industrial employment, external trade, retail trade, railway transportation, finance, and commercial failures. For all fields except prices the data include original unadjusted series and their corresponding seasonally adjusted series and seasonal indexes.

CANSIM Manuals and other Publications*

CANSIM: An Introduction to the Canadian Socio-economic Information Management System—Free.

530 *CANSIM: Operational Manual for Data Entry* (Occasional)—Price $1.

This manual will be of practical interest only to federal government agencies which store and maintain time series in the CANSIM data base. Users desiring a fuller knowledge of the codes used and the storage methodology will find this volume a useful companion to the "Retrieval Manual".

Catalogue
number Title and Description

CANSIM Manuals and other Publications (Cont'd)

*12–531 *CANSIM: Users' Manual for Data Retrieval and Manipulation* (Occasional)—Price $1.50

Gives detailed instructions on procedures for obtaining data on magnetic tape from the CANSIM data base. The initial very rudimentary retrieval package described will be enlarged and improved; the manual will be expanded and modified accordingly. Existing "commands" will, however, continue to be supported.

— *CANSIM: Summary Reference Index*—Free on request.

This index represents a key to the contents of CANSIM, the Canadian Socio-economic Information Management System, and is the first step in location and ordering time series from the system.

— *CANSIM Matrix Directory*—Free on request.

This directory lists in numerical order all matrices (roughly equivalent to a table) stored in CANSIM. Here the user finds for each matrix a title which gives a general description of the series included. the data source and, in some cases, a matrix note providing additional information of importance.

— *CANSIM Series Directory*—(Order by matrix number. Purchaser pays nominal charge to cover the cost of reproduction).

This directory contains titles and other descriptive detail for all series in the matrix. It is used in conjunction with the *CANSIM Manual for Data Retrieval and Manipulation* (12–531) to order series from DBS. May be ordered for specified matrix numbers.

This Review, the above and other publications of the Dominion Bureau of Statistics, including a free annotated catalogue of current publications, may be ordered from Publications Distribution, Dominion Bureau of Statistics, Ottawa, Ont., or from the Queen's Printer, Ottawa, Canada, and remittances made payable to the Receiver General of Canada. For further information direct inquiries to:

General Time Series Staff,
DBS, Ottawa.

endments to catalogue numbers 12–530 and 12–531 will be issued periodically and will be available from the General Time Series
ff, DBS.
